Europeans begin task of selecting new parliament

The UK, Ireland, Denmark and the Netherlands go to the polls today, opening the continent-wide voting for the European parliament. Ballotting in the eight other EU states - Belgium, France, Germany, Greece, Italy, Luxembourg, Portugal and Spain - takes place on Sunday. The elections will also be seen as a popularity test for some national governments. The UK's Conservative government led by John Major is under most pressure, expected to lose about a third of its seats in Europe. EU poll issues, Page 2; Editorial Comment, Page 15.

Berlusconi acts to boost jobs Italy's right-wing government led by Silvio Berlusconi announced its first major policy initiative, introducing legislation to boost employment through tax incentives and by reducing rigidities in the labour market. Page 16; EU challenge grows to Italy's neo-fascists, Page 3.

Japanese budget agreed The lower house of the Japanese parliament agreed the nation's Y73,000bn (\$691.5bn) budget for the current year, two months late. Page 16.

OECD set to expand Ministers from the 25 nations of the Organisation for Economic Co-operation and Development moved towards expanding the Paris-based body by approving membership talks with South Korea and four east European countries. Page 16.

United Airlines, the largest American carrier, faces the threat of a shareholder revolt over its plans to give employees a 55 per cent controlling stake in the company in exchange for labour concessions. Page 17.

Oxford University honours US president:

US President Bill Clinton was awarded an honorary degree of doctor of civil law at Oxford University, Oxford, yesterday. Oxford tried not to let the US president's visit cut too heavily into its routine, although outside the Sheldonian Theatre, where Clinton received his degree by diploma, there seemed to be enough electronics and satellite communications equipment to restart the Star Wars programme. Page 8.

Euro Disney, the beleaguered leisure group, secured shareholders' agreement for a FF13bn (\$2.7bn) emergency restructuring package and announced details of FF6bn rights issue. Page 17.

Heron International has selected a group of investors led by US businessman Steven Green as the preferred buyer of Gerald Ronson's property company. Page 17.

Interpol chief urges radical drugs policy: Raymond Kendall, head of Interpol, the international police group, called for the decriminalisation of drug possession by users. Page 17.

W European car sales up 12.9%: Western European new car sales rose year-on-year by an estimated 12.9 per cent in May to 1.05m, the biggest monthly increase this year. Page 4; UK truck sales jump 14.9%, Page 9.

Mexico-US sugar row looms A planned switch by Mexico's Coca-Cola bottlers from domestically produced sugar to imported corn syrup is threatening to set off a trade dispute with the US. Page 7.

Russia struggles over military cash: A fierce struggle over Russia's military budget, which may affect the survival of the government, further economic reform and the political neutrality and effectiveness of the armed forces, is coming to a head in Moscow. Page 4.

Tougher sanctions against Haiti: The US is expected to announce tougher economic sanctions against Haiti this week as it moves to implement recommendations from the Organisation of American States to tighten the noose on Haiti's economic elite. Page 8.

Brazilian joins race to head WTO: Rubens Ricupero, Brazil's finance minister and former Gatt ambassador, has been endorsed by his government as Brazil's candidate to head the World Trade Organisation, and looks set to win wide Latin American support. Page 7.

UK companies must consult on redundancy plans

By Robert Rice and David Goodhart
in London

British employers will for the first time face a statutory obligation to inform and consult with employees when planning more than 10 redundancies, or if they transfer employees from one business to another, following two rulings by the European Court of Justice.

This means that even non-united companies will have to establish machinery for consultation where it does not already exist. The degree of change that will be needed in personnel practice is uncertain. Issues to be resolved will range from setting up committees elected by employees to simply notifying those concerned in advance. "This is the most important case in UK

industrial relations in the past 20 years," claimed Mr Fraser Younson, vice-president of the Employment Lawyers Association.

The rulings also formally clear the way for compensation claims against the government by many employees who received inadequate protection under British law when transferred to new employers or made redundant throughout the 1980s. Some estimates of the number of claims are as high as 60,000.

The Luxembourg court said the UK had failed to implement key aspects of the European acquired rights (1977) and collective redundancies (1975) directives.

In translating the European rules into English law through the 1981 Transfer of Undertakings (Protection of Employment) Regulations, known as Tupe, the UK limited the requirement to inform and consult to those employers who recognise trade unions.

Luxembourg has ruled that all employees, including the growing majority not in unions, must be consulted.

The judgment, which was not unexpected, was played down by the government as a "technicality".

But the ruling was welcomed by trade unionists and Labour politicians. Mr John Monks, Trades Union Congress

general secretary, said: "The right of workers to be consulted over redundancies and transfers is a key element of social policy which had been deliberately denied to British workers."

The government is expected to introduce the required changes to legislation in the next few months. The precise form the informing and consulting with workers will take is likely to give employers the maximum flexibility possible.

In addition to the consultation issue the court confirmed that the UK was guilty of excluding the public sector from the job security and wage protec-

Workers given a voice, Page 9

Greenspan warns banks of need for self-regulation

By John Gapper, Banking Editor,
in London

Banks and other financial institutions will increasingly have to self-regulate their trading activities because of the growing complexity of financial markets, Mr Alan Greenspan, chairman of the US Federal Reserve Board, said yesterday.

Mr Greenspan, who spoke after addressing the International Monetary Conference in London, said financial institutions would have to be increasingly "self-regulated, largely because government regulators cannot do that job".

His remarks indicate that regulators will in future place more stress on the skills of individuals and sophistication of technology in financial institutions, rather than insisting on examining their assets and liabilities in detail.

Mr Greenspan said that central banks would gradually move from the direct supervision of banks' credit risk towards monitoring their internal processes and risk management systems.

He was supported by other international central bankers in casting doubt on central banks' ability to contain volatility in bond and other financial markets

by imposing further regulations.

Mr Greenspan said that financial institutions would also have to "create risk management systems that can take very considerable shocks". There was "no fundamental alternative" to financial supervision moving towards this model.

His remarks follow an indication that supervisors may allow banks to use internal models to calculate what capital to hold against trading risks, rather than using a model devised by the Basle committee of international

bank supervisors.

Mr Greenspan also said that an integration of the views and policies of banking and securities regulators was "inevitable", despite current disagreements on capital requirements for market risk between supervisors of the two industries.

The two men emphasised that Britain could participate in the first stage of European monetary union if conditions were right after 1996 or 1999 under the Maastricht treaty. Mr Tietmeyer said he hoped that Britain would do so.

Mr Tietmeyer emphasised that a move to monetary union would require only that currencies operated within "normal margins" in the exchange rate mechanism.

The question of whether this meant a return to narrow bands had yet to be resolved.

The two men emphasised that Britain could participate in the first stage of European monetary union if conditions were right after 1996 or 1999 under the Maastricht treaty. Mr Tietmeyer said he hoped that Britain would do so.

The new Air France request is particularly controversial because in 1991 and 1992 the Commission approved a capital top-up for the troubled French carrier worth FF15.8bn in three tranches.

Further aid, critics like British Airways say, conflicts with the Brussels doctrine of "last chance" restructuring aid.

In addition, they say, only under duress has Air France started to abide by its EU obligations to open up routes to competition.

After that date the Commission will very stringently assess the effects of the aid on competition, and, if at all, accept such aid programmes in very except-

ed circumstances.

Aid barely lifts Andalucia, Page 3

NEWS: EUROPE

EU poll issues that have guided Twelve campaigns

UK Voting today. Over monetary union, the governing Conservatives say the UK parliament should have the right to decide on a single currency. Opposition Labour is more compliant, saying exchange rates should be fixed after economic convergence. Liberal Democrats support moves to a single currency "in step" with other states.

On political union, the Conservatives insist the EU cannot supersede nations, and Britain's veto must be retained on issues of vital national interest. Labour is committed to an integrated and co-operative Europe, with veto retained on defence, fiscal, foreign and constitutional matters.

The Liberal Democrats are for a democratic, decentralised, federal Europe. They support a significant extension of qualified majority voting but with national veto retained over monetary and defence decisions by the council of ministers.

The social chapter is opposed by the Conservatives and backed by Labour. The Liberal Democrats support it on balance, but are opposed to 35-hour week "strafjacket".

LIKELY RESULT: Conservatives likely to win less than 30 per cent of vote, with sharp fall in seats from 32 in 1989 magnified by majority voting system. Labour could take 50 or more; Liberal Democrats up to 12. David Owen, London.

Spain Voting Sunday. The main Spanish parties all favour closer European integration, with no clear division over European policies but with differences of emphasis. The governing Socialist party and conservative Popular party support economic and monetary union. Both want a stronger European parliament. Socialists put more emphasis on employment, the PP on control of public spending and deregulation. Both want farm policy better adapted to Spanish interests.

The Communist-led United Left proposes a decentralised federal model for Europe, with the parliament exercising full legislative powers and control

over the Commission. It also argues for agricultural reform. On EU foreign policy, both want more co-operation in the Mediterranean and with Latin America.

LIKELY RESULT: Opinion polls give the Socialists only about 31 per cent of the vote, with the PP taking between 37 and 40 per cent. The United Left is predicted to show strong gains with up to 15 per cent of the vote. David White, Madrid.

Germany Voting Sunday. On the issues of political and economic union, the main German government and opposition parties share many views. They favour strengthening European institutions, including giving more power to the European parliament to counter-balance the council of ministers. They want to reinforce common foreign and security policy, and more common action on crime-fighting and immigration.

All agree on the need for eventual enlargement to bring the democracies of central and eastern Europe into the EU. However, the opposition Social Democrats say this can only happen after further reform within the Union - not least to bring agricultural spending under control. They argue for "deepening" before further "widening".

On monetary union, the parties say the economic convergence criteria are more important than the precise timetable.

On social policy, the differences are clearest. The SPD favours Europe-wide social standards. The Christian Democrats stand for minimum standards of protection, without excessive regulation. The Free Democrats tend towards deregulation to improve labour market flexibility.

LIKELY RESULT: The latest opinion poll, published by Focus magazine, shows the SPD and CDU neck-and-neck on 38.5 per cent, with the FDP

and the Maastricht treaty, writes David Marsh, European Editor. A pan-European opinion poll for the European Commission, published this week, indicates that 55 per cent of the electorate will be guided by national issues in their voting

failing to make the 5 per cent needed for seats in the parliament. Quentin Peel, Bonn

Greece Voting Sunday. In a lack-lustre campaign that has done little to provoke controversy, the three main political groupings in Belgium have presented a virtually united face on the need for monetary and political union and a social chapter.

For Belgium's Christian Democrats, Socialists and Liberals, the desirability of a single currency is not in doubt. In a country where people put region before country, the Belgian franc inspires no great affection.

Even the Liberals who allegedly favour Thatcherite economics believe a social chapter is important to raise the living standards of Europe's poorer workers.

LIKELY RESULT: The Social Democrats and the Liberals both stand to win 24 per cent, according to a Gallup poll this week. The anti-European alliance of the June Movement and the People's Movement Against the EU may win 18 per cent. The Conservatives would gain 12 per cent. Hilary Barnes, Copenhagen.

Ireland Voting Today. Domestic issues such as unemployment and taxes have tended to dominate the campaign, but the Fianna Fail-Labour alliance seems unlikely to suffice from a protest vote.

Apart from Democratic Left, which is the most Euro-sceptic party fighting the election, the main parties agree on the need for monetary union. Labour and Fianna Fail, the centre-right party led by Mr Albert Reynolds, prime minister, also place great emphasis on the need for strong EU social and employment policies.

The opposition Fine Gael and Progressive Democrats have tried to discredit the coalition over a controversial passport-for-investments scheme.

LIKELY RESULT: Fianna Fail, topping the polls in all four constituencies, is set to win seven of the 16 seats, one more than 1989. Fine Gael is struggling to keep its four and could

intend to move more towards European questions.

Opinion polls show that most voters throughout the Union - with the notable exception of the strongly Eurosceptical electorates in the UK and Denmark - favour giving the

European parliament more power.

At the same time, with governments in most countries suffering unpopularity as a result of recession and unemployment, a large protest vote is likely in many countries, led by the UK, Spain and

Belgium. The election will deliver important pointers to national contests in the next 12 months - especially the general election in Germany in October and the presidential election in France next May.

Belgium Voting Sunday. The Liberals want an eco-tax in Europe only if the rest of the industrialised world follows suit, while the other parties have indicated a readiness to take part in a "unilateral" European move.

LIKELY RESULT: An opinion poll this week indicates only the Christian Democrats will suffer losses. It is forecast to take eight seats, down two; Labour to remain at its 1989 level with eight seats. Sharp gains are predicted for the two parties which scored well in the general election. The left-of-centre D66 is seen jumping to five seats from one, while the Liberals could double their score to six seats. Ronald van de Krol, Amsterdam.

France Voting Sunday. There is little enthusiasm for the election in Greece. European issues are scarcely mentioned in candidates' speeches, beyond a statutory mention of the Ecu which Greece will get in EU assistance for infrastructure projects over the next five years.

For the governing Panhellenic Socialist Movement, the election is the first test of popularity since it regained power last October. For the conservative opposition New Democracy, the poll is seen as a test for Mr Mitilides Evert, a former mayor of Athens who took over the leadership after the election defeat.

LIKELY RESULT: Pasok looks set to maintain a clear lead over ND, with the nationalist Political Spring gaining ground at the expense of both main parties. One poll this week put Pasok ahead with 41.1 per cent to 38.2 per cent for ND, 7.6 per cent for Political Spring, 4.7 per cent for the Left Alliance and 4.4 per cent for the Stalinist Greek Communist Party. Kerin Hope, Athens.

Netherlands Voting today. The Dutch campaign has been short, uneventful and completely overshadowed by domestic political wrangling following general national elections a few weeks ago.

The four main parties, united in their support for political and monetary union, also agree on the need to extend EU control to areas like policing and immigration.

On social issues, they divide along right-left lines, but differences have also emerged on

the environment. Division in the Progressive Democrats could result in it losing its only seat to an independent Tim Coone, Dublin.

Portugal Voting Sunday. The vote will be a judgment on the centre-right Social Democrats (PSD) after almost two years of recession. It will also test the main opposition party, the centre-left Socialists, in the run-up to a general election in October 1995.

On European issues, the two main parties differ little. Both are strongly pro-European. But while the Socialists openly advocate federalism, the PSD steers away from the term in favour of less emotive expressions such as European integration. Both favour a single currency and greater powers for the European Parliament.

Luxembourg Voting Sunday. The Luxembourg coalition government, composed of the Christian

Socialist and Socialist parties, is firmly in favour of economic and monetary union. Luxembourg is also a firm backer of political union. The government parties are keen to ensure that the rights of small states are safeguarded in the 1996 Maastricht review conference. The opposition Liberals, formerly firmly in favour of European union, are now more sceptical.

Likely Result: The government parties are expected to maintain their supremacy, keeping five of six seats. David Gardner, Luxembourg

REVIEW
Aid bare

Region languishes despite quantities of EU cash

Aid barely lifts Andalucia

By David White
in Madrid

Hundreds of German and Dutch families moved down to La Carolina in southern Spain but discovered the homes they were promised were still unbuilt. The promoter had called it "the European gateway of ELECTIONS happiness". Instead, they found themselves in a barren landscape where the locals treated them as losers.

Another Costa time-share scam? Not quite. It was an experiment in farm settlement, in 1957. Today's mayor says it created "a European Union in miniature". Its remnants are some curiously tall, blond people in surrounding villages and the occasional odd-sounding surname like Nel or Scheife.

La Carolina is no longer the end of the world. A spanking new highway runs close by. But these days hardly anybody goes there. There are no tourists and few jobs to be had. Last year, two of the main employers, including a telecommunications equipment plant belonging to Siemens of Germany, shut down. More jobs hang precariously on the future of Suzuki's car-making subsidiary, Santana Motor, in nearby Linares.

Linares, as near to being an industrial town as anywhere in Andalucia, has been on a war footing for more than three months. Suzuki, fed up with paying for losses, wants out.

The whole area has taken to the streets against job cuts. The factory fence is strung with banners pledging the support of everybody from the fire brigade to the basketball club. The company's Japanese executives have gone to ground.

The plant is not big by European standards, employing 2,400. But this is more than any other single industrial facility in Andalucia, a region of 200,000 seasonal farm labourers in Andalucia and neighbouring Extremadura. Agricultural "day-workers", who work at least 60 days, usually moving from harvest to harvest on big estates, can claim about Pt27,000 (£130) net a month for half the year when they are not working. Notoriously vulnerable to fraud, the plan has cost about Pt1,000m since it was introduced 10 years ago. Opposition conservatives see it as a disincentive to work. Distant from any of the standard images of European farming, it has created its own unique brand of subsidy culture.

Andalucia is the European region which receives most structural aid from the EU. But it has only a third as many companies as Catalonia, which has a smaller population. Ninety per cent of those employ fewer than 50 people. "Attempts at industrial take-over have repeatedly failed," notes a regional government study. There is little entrepreneurial spirit, and many established companies - like San-

tana Motor - have become uncompetitive.

Mr Francisco Vallejo, La Carolina's Socialist mayor, thinks the impact of the single market will be "fairly negative in the short term" in the region. "These companies worked well when the market was closed."

Andalucia is a prime focus of attention in the European election, with regional elections being held simultaneously on June 12. The Socialists' outright majority in this strong-hold region and their leading position in the country as a whole are both in jeopardy. Mr Fernando Morán, the former foreign minister who heads the list of Socialist candidates for the European parliament, used to be MP for Jaén, the olive-growing province which includes Linares and La Carolina. He says the south is "a priority problem" and hopes it will not become a distinct world like Italy's Mezzogiorno.

Government officials in Madrid say the north-south divide is less accentuated in Spain than in some other countries. "It is not the worst south of southern Europe," one commented. But the pattern of dependence - on Madrid, on foreign investment, on second-hand technology, on Brussels - is far from being broken.

EU challenge grows to Italy's neo-fascists

By David Gardner
in Luxembourg

The growing challenge to the presence of neo-fascist members of the new Italian government in European Union institutions widened further yesterday, when another EU ministerial meeting was held up by a protest from Belgium.

Yesterday's incident, at a council of environment ministers in Luxembourg, follows a denunciation of the Italian neo-fascist leadership at the weekend by Mr Jacques Delors, president of the European Commission, and the decision on Tuesday by all four main Dutch parties to boycott the Commission if Rome names a far-right candidate as one of its two commissioners.

At the end of last month, an EU telecommunications council was held up when the Belgian Socialist minister, Mr Elio de Rupio, refused to shake hands with his Italian counterpart, Mr Giuseppe Tattoni, deputy prime minister for the far-right National Alliance (AN-MSI), "deplored" his presence.

Yesterday, Mr Jacques Santini, the Belgian Socialist environment minister, marked the presence of another Italian neo-fascist, environment minister Altero Matteoli, with a statement underlining the obligation of EU ministers to defend democratic principles. The recent commemoration of the 50th anniversary of the D-Day landings to liberate Europe from fascism, he said, "should make us reaffirm loudly and clearly what the fundamentals of democracy are".

Mr Matteoli replied that "the principles of freedom and democracy referred to will never be put in doubt". He also pointed out that President Bill Clinton began his D-Day remembrance trip to Europe on Tuesday and had shown no compunction in meeting AN-MSI ministers and its leader, Mr Gianfranco Fini.

Mr Delors, however, responded on French television at the weekend to recent remarks by Mr Fini by saying that "we must move from a vigorous vigilance" of the Italian far-right "to a more concerned vigilance".

Mr Fini had said that the fascism of Mussolini had been positive until the 1938 racial laws; that Europe had lost its cultural identity as a result of the D-Day landings; and that

"there are moments when freedom is not an essential value".

"I read [this] with anger in

my heart," Mr Delors said.

The position of the Dutch group was underlined by Mr Gijs de Vries, a prominent right-wing liberal MEP, who warned that the European parliament would use its powers if it contained an Italian neo-fascist.

The dominant Socialist group at Strasbourg, set to bolster its position in this week's Euro-elections, voted in May to boycott all Italian neo-fascists in EU institutions.

Italian government officials indicated yesterday that it was unlikely that Mr Silvio Berlusconi, the prime minister, would name an AN-MSI candidate for Brussels, favouring instead Mr Enrico Vinci, current secretary-general of the European parliament, and Mr Marco Panella, the maverick Radical party MEP and national MP.

Some EU diplomats also said that it was unlikely Mr Berlusconi would back Belgium's premier, Mr Jean-Luc Dehaene, favoured by France and Germany to succeed Mr Delors next year, in the light of successive Belgian snubs to his minister.

All the main candidates to succeed Mr Delors are courting the new Italian prime minister before the Corfu EU summit on June 24-25.

East Germans look to widen their horizons

By Judy Dempsey in Berlin

"You bet I am going to vote in the European elections," said Ms Gisela Böse, a 58-year-old mother of three sons. "And I will tell you why. We have to keep the Nazis out. A low turnout will play into their hands."

As an east German, this is the first time Ms Böse has had the chance to vote in these elections. Yet she and many of the residents of the Rosenthaler Ring housing estate in Friedrichsfelde, a socially-mixed district of east Berlin, cannot name their European parliamentary candidates.

"We have no idea who they are or what they look like," said Ms Böse. "They never come around here. I have never seen any of them campaigning. The only thing we know about the European parliament is through the television."

Growing success for unique MBA

A UNIQUE distance learning MBA, designed for finance specialists, accountants, managers and financial services sector managers, is becoming a growing success story in management education.

The programme, a joint-venture MBA developed by the world famous Manchester Business School and the highly respected School of Accounting, Banking and Economics at the University of Wales, Bangor, is proving so successful that now over 500 students are registered worldwide.

The programme, introduced in 1992 after several years of careful planning, is distance learning for the convenience of students who prefer to arrange their study around their professional life. The programme has a high level of contact with faculty, maintained through residential workshops run in the UK and at overseas support centres.

The number of students in each workshop is kept deliberately low to maintain the teaching quality and interactive nature of the sessions.

The MBA's modular structure links with other advanced management education programmes by offering exemption-based entry routes. The programme is one of the two distance learning MBAs in the City Lombard Scheme and has a major sponsorship link with Barclays. Further details: Institute for Financial Management, University of Wales, Bangor, Gwynedd LL57 2DG. Tel 0248 371495 Fax 0248 370769

sion. I haven't a clue what any of the candidates stand for."

Mr Günther Kühnholz agrees. "Nevertheless, I will vote. But at my age - I am 65 - the European elections mean very little to me. They are more important for my children. They like to travel," he said. "You see, I could not do any of that when the Wall divided Germany. If we have a bigger European Union, they will be able to travel without any bother. Maybe we should expand Europe to the countries of eastern Europe, and to Switzerland, and to Scandinavia. By the way, who is standing in our district?"

One of the candidates is Mr Hans-Wilhelm Ebeling, a member of Chancellor Helmut Kohl's governing Christian Democrats. Mr Ebeling, 60, lives in a large bungalow on a quiet, tree-lined street just a 10-minute walk across the tram tracks from the Rosenthaler Ring estate.

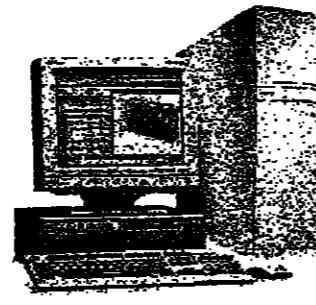

He holds different views about how the European Union should be enlarged and what values it should hold. "I support some degree of enlargement. But it should extend to the Christian countries with humanist values. I don't think I would go beyond the Urals."

A former theologian who, in the heady days of German unification, tried to set up in eastern Germany a sister party of the Bavarian-based Christian Social Union, Mr Ebeling would also like to see a ban on parties such as the far-right Republicans, and even the Party of Democratic Socialism, the successor to east Germany's former Communist party. "They are not democrats," he said.

Mr Norbert Glante, his Social Democratic counterpart in Potsdam, does not believe in drawing up new borders in Europe. "The European parliament should try to open up borders with eastern Europe and Russia. It is really important for the east Germans to have more trade and better contacts with the west. We are all in Europe together." If the 41-year-old former technician is elected - and his chances are high since his constituency around Brandenburg is SPD - he would lobby for more funds for roads and infrastructure from this part of eastern Germany to the east.

Yet, however much the voters and the candidates differ on where Europe starts and ends, they share one common aspiration: EU countries should have a united policy on crime, security and youth. "Now the borders are open, there's so much crime and the youth are being dragged into it," said Ms Böse. "Then they start drifting into neo-Nazi groups and start getting violent. This cannot continue. This is a European problem."

When it comes to PCs, IBM, Compaq and Acer stand out.

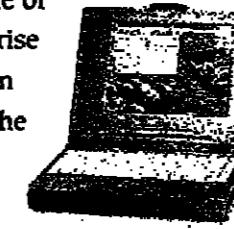

Yes, Acer.

We're not as big as IBM® or Compaq®—but we're closer than you think.

In fact, our sales are fast approaching \$2.8 billion. And if that surprises you, you're not alone. After all, Acer® has been quietly manufacturing PCs for other computer companies for over 12 years. Throughout our 15 worldwide manufacturing and assembly plants. That's how Acer has become the PC market share leader in eight countries across the globe (not to mention one of the top three leaders in many other countries). It should therefore be no surprise that Acer was one of the first computer companies to deliver systems based on Intel®'s 90MHz Pentium® processor in all the major markets. We're confident the next time you think of leading computer companies, you'll think of Acer.

Light escape likely for Balsam bankers

David Waller on how Germany's newest scandal contrasts to the Schneider case

Following shortly after the collapse of the Jürgen Schneider property group, Germany's large banks have been hit by another case of alleged fraud at a heavily indebted company.

The company at the centre of the new debacle is Balsam, a manufacturer of flooring materials used to make tennis courts, artificial surfaces for football pitches and running tracks and other sports installations, based in the town of Steinhausen near Bielefeld in Westphalia. Balsam owes DM1.5bn (554m) and its entire four-man board was arrested earlier this week on suspicion of credit fraud.

Deutsche Bank, Dresden Bank, Westdeutsche Landesbank and other large German institutions own an indirect 15

per cent stake in Balsam via WFG Deutsche Gesellschaft für Wagniskapital, a venture capital company. Despite this bankers said yesterday that the direct and indirect credit risk is spread between 40 banks and that no individual bank is owed more than DM100m.

This contrasts with the case of Schneider, where banks are owed DM5bn and Deutsche Bank alone is owed DM1.2bn, against which it has had to make a DM500m provision.

But although the Schneider case was significantly bigger than Balsam, there are parallels. Both companies were led by charismatic entrepreneurs whose apparent wealth served to dampen bankers' fears about mounting debts.

Just as Mr Jürgen Schneider,

the property entrepreneur whose disappearance triggered the property crisis, always paid his interest bill on time - so Mr Friedel Balsam, chief executive of the flooring group, was always punctual in meeting his payments to bankers.

"Moreover he was always willing and able to inject further cash into the business from his own resources," said one banker yesterday.

It was perhaps for this reason that bankers were indifferent to the scale of Balsam's debts which seem vast for a company with turnover of a modest DM450m and net profits of only DM10m last year. This parallels bankers' nonchalance about a rapid build-up of debt at Schneider prior to his recent disappearance.

Bankers, due to gather last

night in Wiesbaden for their first talks on Balsam, said the company's biggest direct creditor was Procedo, Germany's largest factoring company. Factoring, a financing technique which is in its infancy in Germany, is at the heart of the alleged fraud.

Factoring companies advance cash to their customers against the security of unpaid invoices. They take a commission for the service provided and assume responsibility for collecting their customers' outstanding receivables.

According to Mr Jost Schmideskamp, state prosecutor in Bielefeld, the four directors of Balsam have been arrested on suspicion of forging documentation to support factoring agreements.

Mr Schmideskamp said the

board stood accused of concocting large orders from foreign customers, or of inflating the value of real contracts by a factor of 60 in some cases. The invoices for these fictitious orders were presented to Procedo in conjunction with documents purporting to be from a US bank and a US accounting firm, but these documents were alleged by the prosecutor to be fraudulent.

He said that the cash raised against the invoices was used by Mr Balsam and his boardroom colleagues to speculate in the currency markets. The fraud has allegedly been running for a number of years and the state prosecutor said it opened its investigations into the case in late 1992.

The alleged fraud is given an added twist by the fact that Mr

Balsam, 85 per cent shareholder in the flooring company, is also a minority shareholder in the company he is accused of defrauding: together with his finance director he has a 3.9 per cent stake in Procedo. But business between Procedo and Balsam was conducted on an arms' length basis, Procedo has insisted. Balsam is believed to have been Procedo's biggest customer, but how much Procedo is owed has not yet emerged. Neither is it clear how much Procedo itself owes the banks with which it refinanced its factoring business.

For bankers mulling on the similarities to the Schneider case, there is one consolation: while Mr Schneider's whereabouts are unknown Mr Balsam is at least behind bars.

EUROPEAN NEWS DIGEST

Shipping line controls sought

Shipping lines should not be allowed to fix prices for the terrestrial leg of long-haul deliveries, the European Commission said yesterday. A report presented by Mr Karel Van Miert, competition commissioner, says that so-called shipping "conferences" - powerful agreements between shipping lines - would be contravening EU competition rules if they agree to fix prices on road or rail transport services to and from ports. At present, shipping conferences have a bloc exemption from competition rules on the port-to-port leg of journeys which allows them to fix common rates. They argue that they would not be able to make ends meet without the exemption. However, big EU exporters say that the shipping lines are behaving as an illegal cartel and are imposing exorbitant prices. The report, approved by the commission yesterday, will be presented to transport ministers at next week's council meeting. *Emma Tucker, Brussels*

Bosnian factions sign accord

The warring factions in Bosnia yesterday signed a United Nations-brokered agreement for a one-month nationwide ceasefire and an immediate exchange of all prisoners. The truce is due to come into force at noon local time tomorrow. The surprise accord came after Mr Yasushi Akashi, the UN's special envoy for ex-Yugoslavia, had said late on Tuesday that it would take "a miracle" to get a deal. While yesterday's pact falls far short of the four-month truce Mr Akashi had sought at the start of the talks on Monday, it was, he said, "a first step" towards a complete cessation of hostilities in Bosnia.

The two sides have agreed to refrain from "any offensive military operations or other provocative actions". But, unlike in the original UN plan, there is no provision for pulling back heavy weapons from the frontlines or for the separation of forces by UN troops. Instead, the UN Protection Force (Uprofor) will merely "monitor" the ceasefire.

The pact represents a moral victory for the mainly Muslim Bosnian government, which had pressed for a four-week renewable ceasefire linked to negotiations on a political settlement for Bosnia. It opposed a longer ceasefire on the grounds that this would enable the Bosnian Serbs to consolidate their military hold on 70 per cent of Bosnia. *Frances Williams, Geneva*

EU steel plan postponed

The European Commission yesterday postponed a decision on whether to approve a revised rescue plan for the steel industry. Mr Martin Bangemann, industry commissioner, asked for a week's delay in order to review the treatment of Ecuafilm (210.5m) Italian state aid in exchange for closure of steel-making capacity in Brescia, northern Italy. The Italian closures are crucial for reaching the target of cutting capacity in the EU by a total of 15m tonnes, with the Brescia mini-mills contributing between 5m and 6m tonnes. But the complex cross-ownership of the mills means that not all companies linked to steel-making would shut down. This raises legal problems about state aid being used to fund "partial closures". Mr Bangemann is pressing for a more flexible interpretation of rules on steel aid which would focus on capacity cuts rather than ownership, overturning a Commission decision in favour of a rigorous application of the rules. Mr Bangemann signalled yesterday that he was unhappy with a compromise which would have opened infringement proceedings against the Italians for illegal subsidies, while pressuring the Rome government to come up with a new package of state aid to the Brescia mills. But Brussels officials remain hopeful of agreement next week. *Lionel Barber, Brussels*

Hungary lifts repo rate by 2%

Hungary's central bank yesterday lifted its key repo interest rates by 2 per cent and has also announced a three point rise in the base rate to 25 per cent. Financial markets had expected a tightening of monetary policy after parliamentary elections last month but the scale of the move came as a surprise. The National Bank of Hungary said the measure was needed to curb domestic demand and bring down a persistent external deficit. Figures released yesterday showed a worse-than-expected first-quarter current account deficit of \$300m, little down on the record \$300m registered in the same period of 1993. Hungary ran a \$3.65bn current account deficit in 1993 as a whole, equivalent to about 10 per cent of GDP. But the central bank council, saying monetary restriction alone could not right the external imbalance, called on the new Socialist government to exercise parallel fiscal restraint and reduce a budget deficit forecast at Ft330m (\$3.2m) for 1994. *Nicholas Denton, Budapest*

Part-time work promotion

The German government yesterday gave the go-ahead for a publicity offensive to promote part-time working, aimed at persuading employers to provide more part-time jobs for an estimated 2.5m workers. Details of legal protection for part-time workers, potential productivity gains for employers, and pension rights, will be advertised in 30m newspapers and magazines, and 100,000 brochures. The current proportion of workers employed part-time in Germany is only 15.5 per cent, compared with 34.3 per cent in the Netherlands, and 23.7 per cent in Sweden. The government's campaign does not intend to offer financial incentives to employers, but a draft law will give part-time workers the right to claim full unemployment benefit for three years after they switch from full-time employment. *Quentin Peel, Bonn*

ECONOMIC WATCH

W Europe car sales up 12.9%

West European new car sales rose year-on-year by an estimated 12.9 per cent in May to 1.05m, the biggest monthly increase this year. The slow recovery in the new car market achieved in the first quarter was halted in April by a fall of 2 per cent year-on-year.

Provisional figures released yesterday by the European Automobile Manufacturers Association (Acea) suggest that the setback was only temporary, however, as sales rose sharply year-on-year in France and Spain and in several of the smaller European markets led by Scandinavia, Greece and Ireland. In the first five months of the year new car sales in west Europe are estimated by Acea to have risen by 5.6 per cent to 5.45m. Sales in the whole of 1993 fell by 15.2 per cent to 11.45m, the steepest decline in the post-war period. *Kevin Done, Motor Industry Correspondent*

	57,230	+21.7	Norway	7,460	+8.2
Netherlands	27,700	-12.5	Finland	6,320	+21.3
Austria	27,700	-12.5	Total market	1,093,320	+12.9

* Provisional figures. Source: European Automobile Manufacturers Association (Acea)

■ The increase in orders for west Germany's manufacturing industry slowed in April to just 0.8 per cent over the previous month, compared to a 3.1 per cent increase in March. The main factor behind the slowdown was a reduction in export orders of 1.5 per cent, according to the federal statistics office, whereas domestic orders actually increased by 2 per cent. *Quentin Peel, Bonn*

■ Net direct foreign investment into Hungary rose to \$78m in March from \$26m in February, the National Bank of Hungary said. The cumulative total of \$186m in the first quarter of the year was down from \$255m in the first quarter of last year.

Right now, the Citation X is setting new standards for speed and range, exceeding expectations as it moves through its rigorous flight testing.

When first deliveries begin next year, it will transcend every other business jet in the sky.

The Citation X is quite simply the fastest business jet in the world. The first ever to operate at speeds up to Mach .90 (594 mph).

It will climb direct to 45,000 feet in less than 30 minutes at max takeoff weight. It will streak from LA-to-New York in under 4 hours. And it will cover 3,800 statute miles in less time, on less fuel than any other business jet. While

most other business jets can't even fly one of the Citation X's 10 passengers in stand-up passenger cabins ever created.

Soon there will be only two kinds of operating in the sky. Those who are flying the Citation X. And those who are being left far behind it.

WE'RE SIMPLIFYING NETWORKING FOR YOU. STARTING WITH OUR NAME.

A NEW COMPANY, WITH 15 YEARS OF GLOBAL EXPERIENCE.

Every day the job of enterprise networking gets more complex. Each day for the last 15 years, we've been working with hundreds of the world's most successful companies to make things simpler.

Now we've simplified our name, from Ungermann-Bass to UB Networks, and streamlined our organisation, to help you design and implement complex networking solutions, step by step. We can now provide better access to information as well. Anytime, anywhere.

We are backed by consultants, engineers, and training worldwide, and we offer support for your network 24 hours a day, seven days a week.

PROTECTING YOUR INVESTMENT.

Our networking philosophy has always recognised that budgets are finite. All our products, from stackables to ATM, are designed with backward compatibility and a long life cycle, which will permit you to evolve into new technologies on a pay-as-you-grow basis, rather than making drastic, expensive changes every few years.

STRATEGIC PARTNERSHIPS FOR STRATEGIC ADVANTAGE.

Your networking solution may include needs we cannot meet alone. We have therefore assembled a team of strategic partners very much like a who's-who of leading-edge technology: Tandem, Newbridge, NetWorth, Wellfleet, ACC, Fujitsu and LightStream, to name a few.

Naturally, we provide single-vendor support for solutions we specify.

THINK OF US AS THE "NETWORK DIAL TONE".

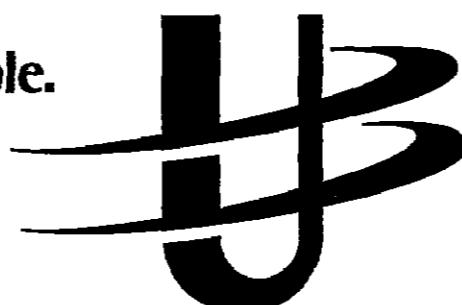

Our goal is to make complex enterprise networks as ubiquitous, reliable and easy to use as the telephone network.

Find out how hiring the right strategic partner can help simplify your networking needs. Call for our free guide, "How To Solve Complex Networking Problems."

We are able to make things simpler for you.

For information call (0) 628-828300.

Our Experience Makes It Simple.

NEWS: INTERNATIONAL

HK seeks to stem prices by releasing land

By Simon Holberton
in Hong Kong

The Hong Kong government yesterday announced measures, including an increase in the supply of land for residential development and changes to the way builders bring property to market, which it hopes will check the rate of price rises in Hong Kong's overheated residential property market.

The government's overriding objective has been to see doing something about rising house prices, but not enough to precipitate a crash in the value of what remains most people's principal asset. Yesterday's mainly supply-side measures were seen by analysts as fitting that requirement.

The government said it planned to allocate an extra 70 hectares of land for residential development in the years before 1997-98, including 15ha in the current year. The release of this land, however, will need China's approval. Beijing has in the past indicated its concern about property prices but has yet to give its response. The government also reminded China that an early agreement on financing Hong Kong's new airport would free even more land for residential development.

The government has asked

property developers to cut to 10 per cent from 50 per cent the number of flats they allocate to insiders, such as staff and associates. On current levels of construction this would add 10,000 flats to the open market. It has also made changes to rules governing the pre-sale of housing and its financing.

Mr David Faulkner, partner with Brooke Hillier Parker, a firm of surveyors, said: "I think it's going to dampen enthusiasm. But it won't lead to a crash, there are too many genuine buyers out there."

Residential property in Hong Kong has become prohibitively expensive for ordinary people. A 600 sq ft flat on the south side of Hong Kong island costs about HK\$3.5m (£301,000). The market has been propelled upwards by strong demand from the mainland - where a Hong Kong flat is seen as a status symbol - and the growth of the colony as a financial and business centre for foreigners doing business in China.

The government said it would monitor the effect on property prices of yesterday's measures. If "excessive speculation" continued it would consider introducing tougher measures, such as punitive stamp duty on short-term transactions and financial penalties for hoarders of empty flats.

Governor 'reproved' over budget

Patten censured by legislature

By Simon Holberton

Mr Chris Patten, Hong Kong's governor, yesterday made colonial history when he became the first of the colony's 28 governors to be censured by the local legislature.

By a vote of 21 to 11 the Legislative Council (LegCo) voted in favour of a motion "reproving" Mr Patten for "acting against to will of the public" in denying LegCo the right to amend the government's budget.

More important than the actual point of contention was the ill-feeling towards Mr Patten that emanated from the pro-democracy wing of LegCo - hitherto the governor's staunchest body of support. Last night he was accused of being "dictatorial", "colonial"

and falling short of his own rhetoric about "accountability".

Recently Mr Patten has rebuffed pro-democracy legislators' attempts to promote civil liberties. His supporters believe he has been reigned in by the British government which has lost its stomach for any more fights with China about Hong Kong.

A broad coalition of legislators had wanted to reduce property taxes.

Under Hong Kong's constitution - the Queen's instructions to the governor - only the executive branch of government can tax or spend taxpayers' money. Mr Patten, as his predecessor had done, invoked the Royal Instructions to thwart a proposed amendment.

Jordan lines up a cabinet for peace

By James Whittington
in Amman

Jordan yesterday announced a big cabinet reshuffle, in the wake of progress in the kingdom's peace talks with Israel, in which nearly all the main political parties, apart from the Islamists, were given posts.

The changes to 16 portfolios were aimed at closing the gap between the government and parliament, which have had a fractious relationship since parliamentary elections in November 1993. The key portfolios of information, foreign affairs and finance were not, however, affected.

But by appointing a number of MPs to cabinet posts Mr Abdel Salam al-Majali, the prime minister, had hoped to soften rising dissatisfaction against his policies of peace and economic adjustment in the lower house.

A number of leading politicians including members of the

fundamentalist Islamic Action Front (IAF), nevertheless refused to join.

The IAF, which holds the largest bloc of 16 seats in the 80-member parliament, is opposed to Jordan's participation in the peace process which has reached a crucial stage.

On Tuesday, Jordan agreed with Israel to push ahead with items on its common agenda, signed in Washington last year. If successful this may include resolving key issues such as territorial and water disputes over the next few months. Mr Jawad Ansari, the information minister, said that as a result of new developments in the peace process, Jordan must "mobilise all our energies and unite".

The regime's failure to persuade the Islamists and other influential figures to join the government, however, is likely to mean that tension between parliament and cabinet will continue.

Bougainville negotiations called for

By Nikki Tait in Sydney

A delegation of Australian MPs, among the first "outside observers" to visit the strife-torn island of Bougainville, yesterday recommended that Mr Paine Wingti, Papua New Guinea's prime minister, and other top politicians should visit the island in soon in an effort to reconcile interest groups there.

It said it was imperative that a ceasefire be negotiated "by whatever processes can ensure its acceptance and maintenance by all parties" and that "concurrently with the ceasefire, medical supplies and food should be made freely available". The delegation said in a report that "sympathetic third party involvement" could assist this process. The notion of establishing a regional peacekeeping force - drawn from the likes of Fiji, Vanuatu and Tonga - has been mooted recently.

The report also suggested that Australia could host peace talks, and should use its substantial aid programme to PNG to boost humanitarian relief and address infrastructure problems.

peaked problems.

The Arun dam is to be built in a remote, rocky and sparsely populated valley. Only about 150 families will be displaced. Local people mostly want the dam because a 70-mile access road to be built along the valley will connect its 450,000 inhabitants to the outside world.

Environmental concerns are not central to the argument either; the dam will be wedged into the river bed and only a small lake will be created behind it since the normal flow of the river will be sufficient to power the turbines.

The debate centres on economics. The Nepalese government first considered the project in the mid-1980s and reviewed it after the overthrow

of the country's royalist administration and the establishment of democratic rule in 1991. Early proposals for a multi-dam 1,100MW scheme were shelved in favour of one dam with a capacity of 201MW - to be followed by a second 201MW dam later. The first dam alone will produce almost as much power as Nepal's existing generating stations which have a capacity of just 230MW.

The government argues that Nepal must be bold if it is ever to ease its power shortages. Only 10 per cent of the 18m population now has electricity, and even they suffer frequent cuts. The country cannot neglect the value of its 42,000MW of potential hydroelectric generating capacity. With the help of the Arun project, Nepal can think of modern industries. "Arun is our ticket to sustainable development," says Mr Binayak Bhadra, a member of the government's National Planning Commission.

The critics charge that the Arun project is expensive since it costs \$2.5m per megawatt of installed capacity, compared with \$2.5m and less for smaller schemes. They add that because of the time needed to build the road, the Arun project will not produce electricity for at least eight years, so other schemes are needed now. These include village-level micro-dams, medium-sized dams for towns and at least one large project - a \$300m, 140MW proj-

ect on the river Kaligandaki in central Nepal. Kaligandaki is more suitable for Nepal than Arun, say the critics, because it will cost only about \$2.5m per megawatt of capacity and will be built faster because a road is already in place.

The World Bank argues the Arun project is not expensive because the Kaligandaki river flows strongly for only four months a year whereas the Arun river flows at full force almost all year, so the dam's capacity would be more fully used.

The opponents say donor countries, including Germany and Japan, which are making large bilateral aid contributions to the Arun project, are mostly interested in generating business for their own

Housewife who built empire from nothing

China's economic surge is producing a new breed of tycoon, Alexander Nicoll writes

Mrs Kader: "They say I am made of iron and it is true"

As China's economic surge throws up a new breed of tycoons, few can be more unusual than Mrs Rabia Kader. Mrs Kader is an ethnic Uighur Moslem who has built up a business empire out of nothing in Urumqi, the capital of Xinjiang Province in the far west of China. She has managed to do so despite the deep-seated worries of the Chinese authorities about the position of the ethnic minorities who make up 60 per cent of Xinjiang's 15m population.

A 4 square metre shop which Mrs Kader opened in 1982 has turned into a 10,000 square metre shopping centre in the heart of Urumqi. The centre is only part of fast-growing property, trading, agricultural and manufacturing interests grouped under the umbrella of her Xinjiang Arkider Industrial and Commercial Corporation.

"What I have gained today is not something easy," Mrs Kader said in an interview during a visit to London. "It is the result of long struggle and of not sleeping for many months. People say I am made of iron. And it is true."

Mrs Kader is in Britain to seek UK investment in Xinjiang, to buy machinery for her factories and to find a location for a Uighur restaurant she would like to set up in London. She also wants to set up shops selling silk, fruits and other Xinjiang produce.

She is reluctant to talk in detail about the problems she faced in establishing herself. Before the death of Mao Zedong in 1976, she was a housewife eking out extra income through buying and selling goods such as wood and *Liang fu*, a Uighur concoction of tomato powder and garlic said to be good for the digestion.

"We were always depressed," she says of that time. "Any initiative was assumed to be capitalist." But, starting with only the equivalent of \$10, she began to do business in earnest as early as 1977, the year before Deng Xiaoping began to open up the economy.

In 1980, with her eighth child only 40 days old, she embarked on a grueling tour of China's big cities, beginning in Shanghai. "At that time I hardly spoke Chinese at all. I brought together buyers and sellers and even cooked Moslem food for Islamic businessmen."

Mrs Kader traded textiles, clothes and food. She bought goods from Moslems who had gone on pilgrimages to Mecca. The small shop she opened in Urumqi in 1982 became a rapidly-growing focus for her business.

As the 1990s unfolded, unfolded relaxations of official controls made it easier to do business, culminating in last year's award to border provinces of privileges similar to those enjoyed by the booming coastal regions.

Mrs Kader is careful to give credit to the central government in Beijing and the provincial authorities in Urumqi. "In the past 15 years since Deng Xiaoping came to power, China has been moving in the right direction."

Although she is a member of the Chinese People's Political Consultative Conference, an advisory body on which older statesmen and other successful figures sit, Mrs Kader professes to have no interest in politics. "I am just an entrepreneur," she says. "I concentrate on making money and on how I can contribute to the economy of Xinjiang Province. I don't pay attention to politics at all."

Her protestations are understandable, given her sensitive position, as well as that of her husband, who is a scholar of Uighur history. Uighurs, whose language is close to Uzbek and Turkish, number 7m in Xinjiang, China's largest province by area, though ethnic Han Chinese tend to occupy top official positions.

The Chinese authorities are particularly concerned about Uighur nationalism, especially following the break-up of the Soviet Union and the emergence of the new "silk route" states which border on or are close to Xinjiang, and with which Mrs Kader trades actively.

China's premier, Mr Li Peng, toured Uzbekistan, Turkmenistan, Kyrgyzstan and Kazakhstan in April, seeking to strengthen commercial ties partly to ward off ethnically-inspired friction; in Kazakhstan, for example, there are militant Uighurs who seek independence for Xinjiang.

Mrs Kader's success is controversial even within the Uighur community. "Moslem women are normally supposed to stay at home and look after their husband. It is very rare for a Moslem woman to travel so widely. A lot of people complained and were jealous."

But, she says, "I am determined I must succeed. If a man can do it, a woman can do it too."

Her present fortune can only be guessed at, but is substantial. She says she does not want to pass on the business to her 11 children, whose ages range from 30 to 3, because she wants them instead to acquire knowledge, for example of high technology. "I will pay for their degrees in subjects which are useful to society, because I did not have such an opportunity."

US re-awakens its interest in OECD affairs

By Peter Norman in Paris

The US has rediscovered the Organisation for Economic Co-operation and Development.

Mr Warren Christopher was the first US secretary of state to attend an OECD ministerial meeting in over 10 years. He was flanked by Mr Lloyd Bentsen, the Treasury secretary; Mr Ronald Brown, Commerce secretary; Mr Robert Reich,

Labour secretary; Mr Mickey Kantor, US special trade representative; and Ms Laura Tyson, head of President Clinton's council of economic advisers.

Mr Christopher made clear the Clinton administration had high ambitions for the OECD. It could "be a model and an instrument of wider integration in the post-Cold war world", rather like its pre-

decessor, the OEEC, in Europe, in the early post-war years.

The OECD, through its policy analysis and co-ordination,

could help more countries enter the community of advanced industrial nations, Mr Christopher said. It could "assume a new importance in the architecture of the global economy, as a bridge between the Atlantic and Pacific industrial economies."

Mr Christopher and Mr Brown praised the efforts of the OECD in recent years and the role of its secretary-general Mr Jean-Claude Paye.

But the sudden enthusiasm

of the world's largest industrial state for the OECD is a mixed blessing for Mr Paye, who is seeking another five-year term from the end of September after 10 years in the job. US officials stressed yes-

terday they were determined to maintain their support for Mr Donald Johnston, Canada's candidate for the post.

As expected, the meeting failed to reach consensus on the appointment, leaving OECD ambassadors to continue talks on the merits of Mr Johnston, Mr Paye, Mr Nigel Lawson of Britain and Mr Lorenz Schomerus of Germany.

Pakistan urges release of Britons

By Alexander Nicoll in London and Farhan Baloch in Islamabad

The Moslem militant group Harkat-ul-Ansar said it had kidnapped them to highlight human rights abuses by Indian troops in Kashmir. "It is not true that we have abducted them to secure the release of our three leaders," the group said in a statement delivered to the Reuters office in Srinagar, Kashmir's summer capital.

The statement said they would not harm the Britons but warned India against using force to free them.

A note demanding the release of three jailed guerrillas had been left with Mr David Housego, Kim's father and former Financial Times correspondent in New Delhi, who had been trekking southeast of Srinagar with his wife and son and Mr and Mrs Mackie.

Pakistan condemned the kidnapping and appealed for the release of the captives though it also said India must stop human rights abuses in Kashmir.

Mr Amanullah Khan, leader of the militant Jammu and Kashmir Liberation Front, also called last night for the captives to be released.

China, N Korea 'interdependent'

Seoul sanctions plea is snubbed

By John Burton in Seoul, Michio Nakamoto in Tokyo and Jill Bershay in Kiev

full Beijing would be able to use its influence to convince North Korea to agree to inspections.

"China has tremendous influence over North Korea. It is making various kinds of efforts through dialogue which I hope continues."

On a visit to Kiev, Ukraine, North Korea's foreign minister, Mr Kim Yong-han, urged the US to sit down "for a third round of talks" to resolve the differences. Nuclear inspections could then be allowed and nuclear fuel preserved and measured, he added. If direct North Korean-US dialogue was not resumed, "not only the nuclear problem won't be solved, but it will seriously aggravate the situation."

Fyongyang has barred an examination of suspected nuclear waste dump sites and threatened to quit the nuclear non-proliferation treaty if sanctions are imposed. "The target of North Korea's nuclear weapons is us. We have to stop North Korea from developing them at any cost," South Korea's President Kim told the National Security Council.

The US, Japan and South Korea are seeking a resolution to impose immediate but gradually-escalating sanctions. China is opposing the plan and urging continued talks instead.

"Sanctions are not a sensible choice; they would only aggravate the crisis," the China Daily newspaper quoted foreign minister Qian Qichen.

Japan's foreign minister is scheduled to fly to Beijing over the weekend for emergency consultations. Prime Minister Tsutomu Hata remained hope-

ful Beijing would be able to use its influence to convince North Korea to agree to inspections.

"China has tremendous influence over North Korea. It is making various kinds of efforts through dialogue which I hope continues."

In a limited-circulation report on Nepal completed in March, World Bank officials acknowledge there are dangers. They say the successful financial management of the Arun project depends on the government continuing the economic reforms started in 1989, including raising tax revenues, cutting non-productive spending and further increasing electricity charges to reduce power subsidies.

Otherwise, says the Bank, education and health care will suffer. "Implementing the Arun scheme without substantive fiscal reforms would seriously undermine human resource development and broad-based growth and development."

Nepal dam plan a ticket to development - or waste of money

Stefan Wagstyl on \$770m hydro power project due for World Bank decision soon

European non-government development organisations, which are orchestrating campaigns in Kathmandu and in Washington.

World bank officials concede that, even though about 30 per cent of costs will be covered by foreign aid grants, the Arun project could strain Nepal's fragile public finances unless the government carries out a comprehensive financial overhaul. But they say the government has already started the overhaul, so the risk is worth taking.

The bank is promoting the project at a time of growing international concern about evidence that big dams in developing countries often do not deliver expected economic

IFC hopes to set up Palestinian funds

By Nancy Dunne
in Washington

The International Finance Corporation, the World Bank's private sector arm, hopes this year to establish the first of a series of investment funds to promote business development in the Occupied Territories of the West Bank and Gaza.

"If we can structure a fund in a proper fashion, we would be able to attract a fair amount of Palestinian money abroad," said Mr Andre Hovagimian, IFC's director for the region. "We will start small - \$25m to \$50m. If you start big, the money will be squandered."

The fund will be "superbly managed" by technical partners in the US or Europe. "So when the money is used, there is no problem in getting another \$50 or \$100m."

IFC has set up over 30 funds around the world since its first fund in South Korea in 1982. Mr Hovagimian said three areas in the Occupied Territories

ries require immediate attention: house building, infrastructure development, and financial services. "Employment generation is the key to peace," he said. "Unless we get people off the streets, we won't have much of a peace process."

IFC last week approved, as its first investment on the West Bank, participation in the Arab Palestine Investment Bank. This will be the first comprehensive commercial and investment banking institution in the territories which now gets by with one small bank in Gaza and branches of two Jordanian banks.

The small institutions lack the capacity to mobilise and allocate funds for industrial development, said Mr Hovagimian. There are now about 3,700 small and medium-sized enterprises and 40 large companies in the territories, which have mostly had to rely on advances by sponsors or informally raised short-term capital.

As is typical, IFC will only take shares of the fund - in this case up to 25 per cent. It will also extend a credit line of \$25m for lending to small and medium-sized businesses.

The Arab Bank group, a diversified international commercial and investment banking group in Amman, will hold 51 per cent of the equity. The rest will be subscribed by European institutions and Palestinian investors.

Various IFC projects are being studied, including the establishment of a bank to finance housing construction. Future projects could involve promotion of businesses making construction materials.

Mr Khaleel Ahmed, IFC investment officer, said the region had a competitive advantage in tourism, which a real peace could promote, and in light industry. Thanks to Israel, which established at least seven universities in the area, the occupied territories now has a highly educated and skilled workforce.

Eastern Germany has become Europe's fastest growing construction market, Andrew Taylor and Judy Dempsey report

Plans to build a 250m plasterboard plant in Berlin were announced yesterday by BPB Industries of Britain, continuing the heavy investment by European building material companies in eastern Germany.

The region has become Europe's fastest growing construction market as authorities seek to satisfy demands for improved living standards in the east and accommodate the many immigrants who have flocked to west Germany in the past five years.

Last month Lafarge Copepe of France, Europe's second largest plasterboard maker, behind BPB Industries, announced the construction of a DM75m (£23m) plant at Lübben, eastern Germany, to serve the local market and eastern Europe, particularly the Czech Republic.

The French company since 1990 has spent approaching FRF20m (£223m) to acquire and modernise eastern Germany's biggest cement works at Karlsruhe, near Leipzig, supplying about 30 per cent of the region's increasing demand for cement.

RMC of Britain, the world's biggest concrete producer, expects to have spent nearly £500m by 1995 acquiring and modernising cement works, aggregate quarries and ready-mixed-concrete plants in eastern Germany.

The big rise in German housebuilding shows no sign of slackening. The five eastern states, in the first three months of this year, issued building permits for the construction of 23,500 homes, up 121 per cent on the corresponding period last year.

In western Germany the number of new building permits rose by about a fifth during the first quarter, to provide some 115,000 homes.

Total permits, including new building, flat conversions and homes in non-residential buildings, last year rose 14 per cent, to 524,000, in western Germany and 223 per cent, to 82,600, in eastern Germany.

In Britain, by contrast, work started on 165,500 private and public sector homes last year, an 18 per cent increase on the previous year's 156,500 housing starts.

Redland, another large British building material group and Europe's biggest roof tile producer, last year earned

more profit in eastern Germany than it did in the whole of the UK. The company, through its 50.8 per cent-owned German subsidiary, will by the end of this year operate seven tile plants, two chimney making works and one brick plant in eastern Germany.

BPB, announcing its plans for the Berlin works, said Germany buys about 160m sq metres of plasterboard a year. It expects this to rise to 240m sq metres within 10 years.

Mr Alan Turner, BPB's chairman, said the Berlin plant would be able to produce 50m sq metres, making it one of the world's largest single line plasterboard factories. It may also supply eastern European countries such as Poland and the Czech Republic, and is expected to be operational within two years.

Plasterboard is a prefabricated, light, easy-to-use material, ideal for the inner walls of homes and for partitioning offices. It is widely used in the US and Scandinavian countries and has been gaining market share in Britain and France and to a lesser extent Germany.

The eastern region of the country is likely to continue to lead the growth in German overall construction demand, with total orders rising by 35.5 per cent during the first three months of this year.

The federal government last year invested more than DM18.3bn upgrading the region's infrastructure, a rise of 15 per cent on the previous year. Private companies invested DM35.3bn in the non-residential property, up 22 per cent. More than DM33.5bn was invested in private housing, a rise of 42.2 per cent.

Boeing sues Airbus over patents

By Paul Betts,
Aerospace Correspondent

Boeing is suing Airbus as well as the British, French and German partners in the European consortium for alleged patent infringement over a wing slot and flap actuator mechanism.

It is the first time Boeing, the world's largest maker of commercial aircraft, has launched a law suit against its European rival, it confirmed in Seattle yesterday.

The writs have been filed in the UK,

Germany and France against Airbus Industrie, British Aerospace, Deutsche Aerospace and Aerospatiale.

Airbus yesterday vigorously rejected the charges. "We totally dispute the Boeing claims and we have instructed our lawyers to fight the action," a senior official said in Toulouse. Airbus described the Boeing action as "completely misconceived" and said it was "confident as to its outcome".

Although Boeing declined to give details of its complaint, it confirmed that the alleged patent infringement involved wing

parts for its 767 twin engine airliner as well as its new 777 wide-body aircraft.

Boeing would not disclose which Airbus aircraft was involved in the allegation, but it is understood to involve all Airbus aircraft dating from the A320 twin-engine, 150-seater aircraft, the A321 stretched version of the A320 and the new A330 and A340 family of Airbus wide-body airliners.

British Aerospace has overall design responsibility on the slats and flaps on these Airbus airliners, for which it manufactures all the wing sets.

Brazilian nominated to lead WTO

By Frances Williams in Geneva

Mr Rubens Ricupero, Brazil's finance minister and former Gatt ambassador, has been officially endorsed by his government as Brazil's candidate to head the World Trade Organisation, and looks set to win wide Latin American support.

The decision was notified yesterday to Mr Andre Stroessl, chairman of the contracting parties of the General Agreement on Tariffs and Trade, who is in charge of

the selection process. The WTO is due to succeed Gatt next year.

The other official candidate so far is Mr Renato Ruggiero, former Italian trade minister, who is expected to win the formal endorsement of the European Union, probably at the Corfu summit this month.

Though Gatt's top job has traditionally gone to a European, many developing country members feel the time has come for one of their own in the WTO slot.

Latin American candidates put up a

strong showing against Mr Peter Sutherland, the present Gatt chief, in last year's contest. Mr Sutherland has ruled himself out of the WTO race.

Mr Ricupero, 57, is an old trade hand. He was Brazil's Gatt ambassador from 1987 to 1991, when the Uruguay Round trade talks were in full spate, and has held all the main elective Gatt posts including chairman of its governing council and of the contracting parties (members).

This rule was designed to prevent Mexico from importing cheap sugar to satisfy national demand while exporting

Mexico-US sugar row looms

Ted Bardacke on a potential trade dispute with its roots in Nafta

A planned switch by Mexico's Coca-Cola bottlers from domestically produced sugar to the US market where tariffs keep prices high. Under the revised provisions, Mexico agreed that imports of corn syrup would be included, thus preventing soft drink bottlers and other industrial users from switching to imported corn syrup to free up sugar for export. A third of Mexico's average 4m-tonne annual sugar production is consumed by industries that could switch to cheaper corn syrup.

It all began with last-minute changes to the sugar export provisions of the North American Free Trade Agreement, which both the US and Mexico argued were necessary to win ratification of the accord in the US Congress. The original rules gave Mexico an annual sugar export quota of 250,000 tonnes, which the US promised to lift automatically if Mexico proved to be a net sugar exporter for two consecutive years.

This rule was designed to prevent Mexico from importing cheap sugar to satisfy national demand while exporting

domestically produced sugar to the US market where tariffs keep prices high. Under the revised provisions, Mexico agreed that imports of corn syrup would be included, thus preventing soft drink bottlers and other industrial users from switching to imported corn syrup to free up sugar for export. A third of Mexico's average 4m-tonne annual sugar production is consumed by industries that could switch to cheaper corn syrup.

Now, as Coca-Cola bottlers study plans to switch - for a capital outlay of between \$1m and \$2m per bottling plant they can save several million dollars a year on raw materials and transportation costs - they and the US Corn Refiners Association are accusing Mexican trade officials, sugar producers and Pepsi bottlers of erecting an embargo against corn syrup.

The CRA has alleged that the Mexican sugar industry with the support of Dr Jaime Serra Puche, Mexico's minister of trade, has put pressure on Mexican bottlers not to use high-fructose corn syrup. It also alleges that bottlers have been threatened with a boycott by sugar suppliers - which would mean they would have to convert 100 per cent to a sugar replacement - if they do not co-operate.

The trade ministry is under political pressure to protect the domestic sugar industry. Millions of sugar workers hurt by the industry's privatisation have taken over various mills while others are permanently camped in front of the presidential palace in Mexico City. Coca-Cola bottlers say that sooner or later competition from low-cost imported soft drinks made with corn syrup will force them to move away

from refined sugar. The boycott threat would be real only if domestic sugar producers can limit the amount of sugar traded on Mexico's sugar futures market, which began operations in March. So far only 38 per cent of monthly sugar purchases are taking place on the market. The rest is sold directly by mills to industrial users and by middlemen who still control about 30 per cent of the sugar trade.

Coca-Cola bottlers say that with such little volume traded on the new market, they would be forced to pay even higher prices for their principal raw material should mills cancel their direct contracts. The current average price of refined sugar traded on the futures market - \$656 a tonne - is already about 7 per cent higher than industrial users pay in their direct contracts with refiners.

When looking at crop protection you need to dig below the surface

Soil is the farmer's greatest asset. It is constantly loosened and aerated by countless creatures and microorganisms whose biochemical activity releases nutrients. Modern crop protection products must take these processes into account.

They should be completely degradable, so that when rain washes a product into the soil it breaks down into components already found in nature, thus returning them to the natural cycle. Some of our crop protection products even serve as nourishment for microorganisms in the soil. This is a principle to which we give the highest priority.

The process is as simple as a leaf turning into humus. But is it really that simple? Not at all. It takes up to 10 years to develop a product that effectively protects crops without itself causing damage, either above or in the soil.

Environmentally acceptable operations and responsible conduct are, to us, important steps forward in preserving the natural basis of life for generations to come.

We would be happy to provide more information upon request. Please write to Bayer AG, Public Relations Department (KL), 51368 Leverkusen, Germany.

Bayer 

Expertise with Responsibility

Crop protection products should degrade as completely and as rapidly as possible, even in the uppermost layers of the soil.

NEWS: THE AMERICAS

Strict measures planned to back new currency

Brazil aims to deter price rises

By Angus Foster in São Paulo

Brazil is preparing tough legal measures to deter companies from raising prices after the country's new currency is introduced on July 1. The measures are also partly designed to deflect criticism that the government's economic stabilisation plan, launched last December to tackle near-hyperinflation, has benefited business rather than consumers.

A so-called "anti-trust" law was approved by the lower house of Congress on Tuesday and is expected to be passed by the Senate next week.

The measures expected to be adopted include:

- Heavy fines or even prison sentences for those found guilty of implementing "unjustified" price increases and "excessive" prices;
- Companies controlling 30 per cent of a market will be defined as dominant and subject to special scrutiny;

• Mergers or alliances between companies controlling more than 30 per cent of a market will need clearance from a newly empowered watchdog, known as Cade.

The law has been under discussion for a year but its implementation has become a priority only in recent weeks. The government fears that without such a law in place it will be powerless to deter companies from raising prices in the new currency, the real, thereby leading to another inflationary spiral.

Poor Denver. By now, the state capital of Colorado should have been the proud owner of the first new airport in the US for nearly 20 years. Instead, repeated delays to the opening have left the city with egg all over its face. Now critics are asking: Was the whole thing a waste of money?

The \$3.5bn (£2.1bn) project looks like an exercise in magnificence. The 1.4m sq ft terminal building has a Teflon-coated fabric roof shaped into 34 peaks symbolising the nearby Rocky Mountains. Soft, shadowless light filters down through the roof to illuminate the Great Hall beneath, a 128-high atrium paved with Italian black granite and running the length of three football fields. The terminal incorporates more than \$7.5m worth of fountains, sculptures and other works of art.

The only trouble is, there are no passengers in it. The airport was to open last October, but the company that built the computerised baggage handling system - BAE Automated Systems, a Dallas subsidiary of BTI, the British conglomerate - cannot get it to work properly, and the opening has been postponed indefinitely.

US news media are now compounding the city's embarrassment by asking why the airport was built at all. Never mind that it is late in opening and cost nearly twice the original estimate of \$1.7bn; they say: it is a white elephant planned at a time when traffic was growing more rapidly and when US airlines could afford higher landing fees.

For the past 65 years, passengers flying in and out of Denver have used the handy Stapleton airport just outside the city centre. That airport was due to close when the new Denver International Airport opened 24 miles to the north east because the city said it was too small to cope with forecast traffic growth.

Approval should stem criticism from the populist President Itamar Franco, who is unhappy about price rises and high interest rates. Any reduction in interest rates now would be dangerous because of the need for tight monetary policy following the real's introduction.

White elephant fails to take flight

Richard Tomkins looks at Denver's ill-fated new airport

The new Denver airport: should the private sector have built it?

Pena, mayor of Denver in the mid-1980s, drove the scheme through more for political advancement than on the basis of any sound economic justification. (Mr Pena is now US transportation secretary.) Traffic forecasts were inflated to justify the new airport's construction, Mr Boyd suggests. With a bit of adjustment to the runway configuration, Stapleton could have accommodated the traffic for years.

City officials concede that traffic declined between 1986 and 1990, but say it is growing rapidly again. Stapleton is operating close to its maximum capacity, they say, and there is simply no room for expansion.

Just as important, federal regulations do not allow Stapleton's two main parallel runways to be used simultaneously in poor visibility because they are too close together. That reduces the number of flights it can handle from 90 an hour to 30 in bad weather, making the airport one of the worst in the US for delays.

The new airport, with three parallel runways that can be used simultaneously whatever the weather, will solve that problem at a stroke.

Even though the project's severest critics tend to agree that Denver would have needed a new airport eventually, their main argument is that it was axing 24 per cent of its flights in and out of the city.

Yet Continental says it is pulling back from Denver because it sees better business opportunities in the east coast market, not because of higher landing fees; and in any event, the gap is rapidly being filled

by United Airlines, Denver's other big carrier.

Meanwhile a fledgling carrier, Frontier Airlines, is about to adopt the new airport as its base in spite of the higher fees.

Once a big operator at Denver until it went bankrupt in the 1980s, Frontier said it would not have been going back into business if the new airport had not been built.

Meanwhile city officials console themselves with the thought that virtually every new airport is regarded as a white elephant when first built, but seldom stays that way for long. As to the suggestion that Denver's airport might have been built more quickly and cheaply if the private sector had been given the job, they murmur: "Oh? Like the Channel tunnel?"

Critics say the local economy will suffer because these higher landing fees - about \$15 a passenger compared with \$7-\$8 at Stapleton - will drive airlines away. These fears were reinforced when Continental Airlines, one of Denver's two biggest operators, announced recently that it was axing 24 per cent of its flights in and out of the city.

Yet Continental says it is pulling back from Denver because it sees better business opportunities in the east coast market, not because of higher landing fees; and in any event, the gap is rapidly being filled

Tougher sanctions for Haiti this week

By George Graham
in Washington

President Bill Clinton is expected to announce tougher economic sanctions against Haiti this week as the US moves to implement recommendations from the Organisation of American States to tighten the noose on the country's economic elite.

Mr William Gray, the former congressman who has been named Mr Clinton's special adviser on Haiti, said yesterday he expected the US to ban commercial flights and freeze financial transactions with Haiti in the next few days.

"I have confidence that sanctions can create an environment where people come to their senses," Mr Gray told the House of Representatives foreign affairs committee yesterday.

Other nations in Latin America and the Caribbean have also promised to contribute troops for an eventual United Nations mission to provide civil law enforcement in Haiti if and when the military coup leaders step down and allow President Jean-Bertrand Aristide.

Mr Gray said the broad embargo imposed by the UN on May 21 was the first real attempt to apply serious economic pressure to Haiti, since an earlier ban on supplying fuel and arms had been very narrowly targeted.

The new measures were agreed last week by the four countries - Canada, France, the US and Venezuela - which have taken the lead in efforts to restore democracy to Haiti since the military coup in 1991, and approved as recommendations by the OAS this week.

Critics of the Clinton administration's policy on Haiti have complained that sanctions so far have hurt only the country's poor, while the wealthy businessmen who have provided much support for the military coup leaders have been able to fly freely to Miami to stock up on groceries and other supplies.

Mr Gray said that efforts to stop the flow of goods across Haiti's land border with the Dominican Republic had been 75 to 80 per cent effective, and that the sanctions were taking a toll on the wealthy, as well as the poor.

"Our intelligence tells us that there are many who are beginning to feel already, after only three weeks, the bite of the sanctions. This business elite which has supported the coup leaders will not be able to sit back and wait six, eight months before they feel the pain," he said.

Oxford teaches Clinton the Latin for gridlock

By Bernard Gray in Oxford

Oxford tried not to let the visit of the US president cut too heavily into its routine yesterday. True, outside the Sheldonian Theatre, where Mr Bill Clinton received his degree by diploma, there was enough electronic and satellite communications equipment to restart the Star Wars programme.

For a modest distance down the street outside there were crowd barriers, and a number of solid-looking figures with wires sprouting from their ears rumbling into their hands. And rather more men than is perhaps strictly conventional in Oxford were standing on roofs and staring into windows through binoculars.

But for the most part the university seemed to inhale deeply and carried on manufacturing world leaders.

The speech given by Lord Jenkins, Oxford's Chancellor, was careful to maintain the university's dignity at the same time as honouring Mr Clinton.

Mr Clinton dressed in scarlet robes, took some ribbing from Lord Jenkins in good part and said the university had intimidated him before. Following the degree ceremony in Latin, he once more felt like "just another Yank, half a step behind".

Oxford's citation-writers had certainly been hard at it, even managing a Latin translation of the president's "achievements in resolving the gridlock which prevented an agreed budget".

Mr Clinton also shrugged off a student protest outside the church.

As the chanting threatened to drown out his speech, he mildly observed that all forms of debate were clearly still alive in Oxford.

Kartier, after a morning of down rain, Oxford spared some welcoming sunbeams as Mr Clinton's fleet of Chinook and Sea King helicopters clattered into Merton Fields just after midday.

A good crowd turned out to see him land, but he was quickly ushered away for a private walk up Merton Street to the back entrance of University College, where he studied politics as a Rhodes scholar

from October 1963 to June 1970.

While he enjoyed a private lunch in his old college, nervous-looking undergraduates spilled from the Examination Schools next door at the end of the morning paper.

This is final time and some who had finished that lunchtime ended up in the pub which was reported to be Bill Clinton's favourite - the Turf.

By the time the president had finished eating a few streets away, the distinctive white-and-black-gown subfusc uniforms of some finalists were doing passable imitations of lemon meringue pies, covered in flour, eggs, champagne and crazy foam. Good training for a world leader.

Dead or alive, incumbents do well in US primaries

By George Graham

Results from primary elections in eight US states this week suggest that simmering resentment of Washington insiders is still not enough to reverse the strong electoral advantages of incumbency and money.

Members of Congress who had appeared vulnerable because of their financial or sexual peccadilloes, or their voting records, shrugged off challengers to win their party's nominations for the November election.

In southern California, Congressman Jay Kim held on to the Republican nomination with 41 per cent in a five-way race, despite charges that he illegally financed his 1992 election campaign through his own business.

Republican Ken Calvert, another Republican, won his primary with 52 per cent, although some voters were put off by his explanations of what the police had found him doing in a parked car with a prostitute. Democratic Senator Diane

Feinstein will face Congressman Michael Huffington, a wealthy Texan who has spent millions of dollars of his own money on his campaigns.

Members of Congress who had appeared vulnerable because of their financial or sexual peccadilloes, or their voting records, shrugged off challengers to win their party's nominations for the November election.

In southern California, Congressman Jay Kim held on to the Republican nomination with 41 per cent in a five-way race, despite charges that he illegally financed his 1992 election campaign through his own business.

Republican Ken Calvert, another Republican, won his primary with 52 per cent, although some voters were put off by his explanations of what the police had found him doing in a parked car with a prostitute. Democratic Senator Diane

Like most other members who have been targeted by trade unions because they voted in favour of the North American Free Trade Agreement, Congressman Mike Parker of Mississippi also survived a challenge.

In another Mississippi district left vacant for the first time since 1947 by the retirement of Congressman Jamie Whitten, the two leaders in each party's primary will enter a run-off election.

The only incumbent ousted yesterday was Republican Governor Walter Dale Miller of South Dakota. He resigned the office when his predecessor died and was defeated in Tuesday's Republican primary by former Governor Bill Janklow.

One incumbent, San Jose city councilman George Shirkawa, even won re-election by an overwhelming margin, despite being dead for more than a month.

As he closed the door behind him and stepped into the street, the bomb exploded. We collected him after his discharge from hospital. The bomb can do a lot of damage in a narrow Belfast street where danger has become a way of life for over 25 years.

We look after him in our residential home. He will never leave it because of his fear of the outside. His brain connects the outside world from the safety of our walls.

The Ex-Services Mental Welfare Society has nearly 4,000 ex-service men and women to look after and there are more still on the waiting list. Please do help. We have need of every penny urgently.

They tried to give more than they could. Please give as much as you can. I am a member of the society, this is an organization of ex-servicemen and women.

British industrial production and factory output rose sharply in April, indicating that UK economic recovery is increasingly buoyant.

The news was seized as a welcome political boost by the Conservative government ahead today's European elections. Mr Kenneth Clarke, Chancellor, said: "The production figures are the best news on the economy so far this year. Growth is stronger and spread wider."

His upbeat assessment of UK recovery was echoed in the Treasury's monthly monetary report, suggesting the recent downward trend in UK interest rates was firmly ended.

The report was issued as Mr Clarke met Mr Eddie George, Governor of the Bank of England for their monthly monetary meeting. Although the details of the meeting are not released for six weeks, the Treasury report, coupled with yesterday's production figures, left most City analysts convinced that the authorities are unlikely to change the base rates from their current level of 5% per cent at the moment.

Truck sales up 14.9%

By Kevin Done,
Motor Industry Correspondent

Registrations of new commercial vehicle rose by 14.9 per cent in May, as the recovery in the sector accelerated supported by increasing sales of trucks in particular to the construction industry.

Overall new commercial vehicle sales increased last month to 17,588 from 15,311 in the same month a year ago according to figures from the Society of Motor Manufacturers and Traders. Sales in the first five months of the year have risen by 12.8 per cent to 93,088 from 82,482 a year ago.

Commercial vehicle sales, an important barometer of economic activity, are being driven by rising demand for

housebuilding figures published by the government show no sign of the recent slowdown in the housing market recovery reported by some mortgage lenders and estate agents. The figures, however, cover a period before the impact of tax increases in April and the ending of some of the cheaper fixed rate mortgages. The number of new homes on which construction started rose by 4.6 per cent, seasonally adjusted, during the three months to the end of April year-on-year. More recent indications from builders suggest that new house sales, although better than a year ago, have slowed in recent weeks.

The UK money markets are currently assuming that the Bank of England will raise interest rates to about 6 per cent by the end of the year, as stronger growth fuels inflationary pressures. However, the Treasury report yesterday indicated that the chancellor was unlikely to endorse any attempt by the Bank of England to push interest rates up in the short term.

Analysts were encouraged by the breakdown of the figures which showed that production of investment goods was growing at a faster rate than that of consumer goods. In the past, consumer-led UK recoveries have quickly led to balance of payment constraints.

Registrations in this sector were 59 per cent higher than a year ago, and some truck makers are currently facing problems in coping with the rapid increase in demand.

Truck sales in the UK more than halved during the recession from 69,284 in 1989 to only 31,398 in 1992, but demand began a slow recovery last year with sales rising to 36,358 in the whole of 1993.

Imported vehicles are gaining a growing share, as the commercial vehicle market recovers, given the contraction of UK truck manufacturing capacity in recent years.

Imports accounted for 42 per cent of the overall commercial vehicle market in May compared with 38 per cent a year ago.

In the first five months truck

British growth beat Germany

By Robert Taylor,
Labour Correspondent

BRITAIN'S manufacturing productivity growth was "superior" to that of Germany during the period 1979-1988, claims a new study comparing productivity in the two countries over the past 30 years published yesterday by the UK's National Institute of Economic and Social Research.

The report, based on 30 industrial sectors, also found that at the level of individual manufacturing industries Germany does not so clearly dominate Britain, except in the period from 1973 to 1979.

"Almost half the industries showed a superior British productivity growth performance over the entire three decades to 1988," it added.

German manufacturing productivity peaked in superiority over Britain's in 1979 when only three industries performed better in Britain - leather and footwear; drink and tobacco production.

The study calculates aggregate labour productivity growth in Germany from 1960 to 1989 was "a little less than half a percentage point higher per year than in Britain".

However, only six out of the 30 industries covered had a lower productivity performance in Germany than in Britain in 1988: mineral products, iron and steel, office machinery, electrical engineering, drink and tobacco production. In 1960 13 out of the 30 industries had a better level of labour productivity in Britain than in Germany.

The report suggests that the better UK performance in the 1980s was due to the labour market freeing itself "from the worst forms of restrictive practices" while the German economy was "becoming ever more restrictive".

Britain still lags Germany in the number of manufacturing workers with skills, the volume of resources devoted to research and development and in investment in new plant and machinery.

A workman clears away debris from demolished outbuildings at the Davenport brewery in Bath Row, Birmingham. The local council yesterday made a preservation order preventing the demolition of the main buildings just as bulldozers were about to move in. Conservation officers hope the National Heritage department can safeguard the long-term future of the 1930s buildings. Picture: Newton

Workers given a voice by Europe

David Goodhart on yesterday's employee consultation ruling

introduce "works councils" into every British workplace.

In both the 1975 Collective Redundancies directive and the 1977 Acquired Rights directives there is a requirement to consult workers as a typical example of the kind of measure which should be decided at national, not European, level.

They add that such European labour law hits British employers much harder than those in other countries because the laws tend to reflect the continental European system of labour relations and not the more laissez-faire British one. Trade unionists and other supporters of the European social dimension say that consulting workers is merely civilised practice and one backed by law in every European Union country apart from Britain.

But what will yesterday's judgments on consultation actually require from the government and from companies? What it will not do - as some trade unionists claimed yesterday - is give unions a statutory right to recognition or

actions such as the Confederation of British Industry and the Institute of Personnel Management have long recommended institutionalised consultation where unions do not exist.

Many companies have staff associations or other systems such as team briefings which could become the focus of consultation. The debate now will focus on the minimum that an employer can get away with.

Will a discussion procedure with employees suffice or will a committee have to be established, albeit one which could be dissolved as soon as the consultation has taken place?

If such a committee is required will employees have to be independently elected or could the employer simply select them?

A ccording to Mr Fraser Younson, Employment Lawyers Association, the requirement in European law to "consult with a view to reaching agreement" means that it will not be sufficient to inform employees individually and give them an opportunity to respond. If a

committee mechanism is established for consultation then it may well take on a life of its own.

At the other end of the spectrum, Ms Cherry Mill, of the IPM, speculated that it might be sufficient for line managers to give small groups of workers the news through team briefing-type systems or even through electronic mail.

"You have got to back and look at the intention of the directives. They were not designed to establish new industrial relations systems but rather to prepare workers for forthcoming events and give them an opportunity to have a say, something that is the practice already in most good companies", says Ms Mill.

If the amendments to the directives do turn out to have a lasting impact on consultation systems it will not necessarily be to the benefit of British unions. It could, rather, help to nudge the UK closer towards the European model based, in most countries, on statutory *employee* rights, not union rights. That will be little compensation to those employers that see such changes as introducing unnecessary bureaucracy.

Can you meet peak loads in Germany with electricity from a Swedish waterfall?

In Sweden power cascades freely down the mountains, while Germany's power potential lies in the ground as fossil fuel. ABB linked these resources by laying a single submarine cable beneath the Baltic Sea.

Now Sweden's abundant hydropower feeds the German electricity grid, and the two countries can exchange electricity to offset peak loads at different times. ABB pioneered the transmission of High Voltage Direct Current (HVDC), which can shift huge amounts of power, reducing electrical transmission losses by 1/3, across vast distances. HVDC is the key which can unlock the massive environmental benefits of renewable, non-polluting hydropower to replace dwindling fossil fuel resources.

As a leader in electrical engineering for power generation, transmission and distribution, in industry and transportation, ABB is committed to industrial and ecological efficiency worldwide. We transfer know-how across borders with ease. But in each country, ABB local operations

Yes, you can. are decentralized and flexible. That means we are close at hand to help our customers respond swiftly and surely to technological challenges which stretch the limits of the possible.

NEWS: UK

P&O withdraws Chinese workers

By Richard Donkin

P&O European Ferries bowed to pressure from French seamen's unions yesterday and agreed to withdraw 58 Chinese cleaners on its two most recently chartered ferries. The French unions had disrupted dockings at Cherbourg last week and spread the action yesterday to Calais even though P&O had already announced it would be dispens-

ing with the Chinese workers. French workers blocking the departure of a P&O ferry from Calais clogged up sailings for several hours yesterday afternoon, leading to pressure from the British government asking the French government to intervene.

The dispute arose when the French seamen complained that employment of the Chinese could drive down pay rates for other nationals.

P&O suggested yesterday that the action had been a smokescreen for wider fears about French ferry jobs, particularly with the introduction of Channel tunnel services.

Meanwhile, the UK Road Haulage Association warned yesterday that Eurotunnel risks a crisis of confidence among customers if it has further problems with its freight shuttle service.

Mr Sydney Balgarnie, the association's spokesman, said:

"People do not want to get stranded in the tunnel. People want reliability, and if they don't get it they will use the ferries instead."

He was reacting to the second incident in eleven days involving the temporary suspension of a train service because of technical problems. Eurotunnel said the two incidents were unrelated though both involved warning lights signalling non-existent faults.

Bankers of the world unite at Buck House

"Nice one, knight," said the chief executive of an American bank to Sir Dennis Weatherstone, British chairman of the US bank J.P. Morgan.

Sir Dennis was walking down the aisle of a coach full of bankers as it prepared to leave Buckingham Palace, where its occupants had met the Queen.

In his speech at the dinner, held under the Rubens ceiling of the Banqueting House in Whitehall, Sir Dennis said the assembled heads of the largest banks in the world were "walking on air" having been greeted by the Queen and the Duke of Edinburgh at a reception on Tuesday night.

Few passers-by would have realised that the 300 occupants of five coaches which had swept down the Mall from the palace carried such an influential load.

The annual meeting of the International Monetary Confer-

ence was on another leg of a discreet journey round the world's financial centres.

Last year Stockholm, this year London, next year Seattle. The heads of 103 of the world's largest banks are accustomed to being treated well on their annual meetings: opportunities to discuss their industry and hobnob in private discussions and dinners.

As they control several trillion dollars in assets between them, they are used to being treated royally. In Madrid in 1989, they were given a reception by the King and Queen of Spain. The Buckingham Palace reception was generally held to have topped that.

The IMC is not just a meeting for bankers, but for bank- ers' spouses, as they are politely termed. In practice this means wives, since the bank chiefs are all male.

The itinerary for spouses is more complex - and in some ways more demanding - than the bankers'.

While the bankers sat in a hotel discussing financial derivatives and banking regulation, wives went on a whirlwind tour of British history and social life.

This included Blenheim Palace and exhibitions of painting and embroidery. The social whirl ended last night in a reception and concert to celebrate the Bank of England's tercentenary - the reason for the IMC being held in London for the first time since 1979.

Despite its growing international membership, the IMC has an American overtone from its roots as an organisation formed in the early 1950s by American bankers to educate bankers about international finance.

The IMC has remained a favourite meeting for senior bankers because of its size. It is easy for heads of banks to find each other in corridors and at lunches, compared with the vast annual meetings of the International Monetary Fund and World Bank.

It is organised by officials of the American Bankers' Association and banks from the host country. The London event was led by Sir Dennis, IMC president, and Lord Alexander,

National Westminster Bank's chairman, who was widely credited with securing the palace invitation.

The last session was chaired by Mr Richard Thomas, chairman and chief executive of First National Bank of Chicago.

Like others, Mr Thomas was in a cheerful mood yesterday, despite fears over the future of banking expressed during the week.

After dinner on Tuesday, the bankers heard a song composed for the occasion, delivered by a choral group.

"Glory be to the Deutschemark, and to the Yen, but mostly to the pound. As it was in the beginning, before all this talk of a single European currency, is now and ever shall be, Amen," sang the group.

The German and French bankers laughed gamely at this beautifully harmonised propaganda.

Roll on, Seattle.

Dublin 'clarifies' Ulster declaration

By Tim Coone in Dublin

Court deems Lloyds' C&G bid illegal

A large obstacle was last night placed in the way of banks taking over building societies when Britain's High Court ruled that the structure of Lloyds Bank's £1.8m cash bid for Cheltenham & Gloucester Building Society was illegal.

Mr Andrew Longhurst, C&G's chief executive, said that the society intended either to appeal against the judgement or try to find a way of re-structuring the offer to its members in a way that would bring it within the law.

Mr Donald Nichols, the vice-chancellor, ruled that Lloyds could not pay C&G investors who had been shareholders for less than two years. This would make it extremely hard for C&G to gain meet voting requirements for approval of the deal.

Mr Philip Lawson, Lloyds' chief legal adviser, described the judgement as "a hurdle to be overcome". Lloyds said that its bid still stood, and C&G was free to restructure the way in which it divided the cash between its members.

He said he hoped their response will be a "full cessation of violence".

The judgement affirms the section of the 1986 Building Societies Act which was intended to stop "speculative flows" of deposits between societies if a rumour spread that a society was about to receive a bid from a third party.

Mr Longhurst said that the society's advisers would examine the ruling to see if we can modify the offer in some way to bring it within the terms of the judgement.

He said that the benefits of the offer remained clear despite the ruling.

Because of the significance of the issues for all banks and societies, it is widely expected that the matter might have to go to the House of Lords.

level since 1946 with only 31 per cent of employed workers as members, according to the latest statistics published yesterday by the Department of Employment.

In 1992 there was a 5.6 per cent decline to 5.6m from 5.8m in 1991. Since 1979 when the Conservatives came into government the number of workers in unions has dropped by 4.2m. It is estimated 35 per cent of all workers were unionised by the autumn of last year.

While 36 per cent of manual employees are in trade unions, 34 per cent of those employed in non-manual work are also unionised. Thirty eight per cent of men are in unions and 31 per cent of women.

Sixty three per cent of public sector workers are union members but only 23 per cent in the private sector.

Property 'levelling out'

The UK commercial property investment market has levelled out, following its steep rise over the past year, according to new figures.

The total return from the property investment market in May was 2.9 per cent, slightly down on the April figure of 2.3 per cent, according to the monthly index published by Richard Ellis, chartered surveyors.

The decline in the bond market has taken its toll on the property market, with the result that capital growth is no longer being driven by declining investment yields (the ratio of income to capital). Rental growth, which would also provide a boost to values, has not yet appeared. Indeed, rents fell in the month of May, after appearing to have stabilised in previous months.

More companies being formed

More than 10,000 British companies were formed in May, according to figures compiled by Jordans, the Bristol-based information company.

May's total of 10,442 was 18.7 per cent higher than in May 1993, the fastest annual growth rate since Jordans started preparing statistics in this form two and a half years ago.

A total of 53,027 companies have been formed in the first five months of 1994, an 8.1 per cent increase on the same period of 1993. If that rate of increase is sustained for the rest of the year, there will be about 123,000 companies formed in 1994, back to the level achieved in 1990, but still below the 130,000 formed in 1989.

Rail sell-off plans slow

The government's rail privatisation plans have run into further delay after the decision by the managing director of one of the three rolling stock leasing companies to step down.

Mr Tony Roche, whose appointment as managing director of the Eversholt Train Leasing Company was announced on April 21, has left after just over a month to take up a more senior position with British Rail, BR said yesterday.

When he was appointed Mr Roche, a railman with 30 years' experience, was described as having played a key role in the creation of the rolling stock companies that have been set up to lease locomotives, carriages and wagons to the train-operating companies.

British Rail said it had still to find a replacement for Mr Roche.

The government has created three rolling stock companies - two based in London and one based in Sheffield - and has allocated to each a mixture of BR rolling stock.

The leasing industry expects the government to put the rolling stock companies up for sale next year, though this imposes a very tight timetable on the programme.

Pizza Hut to expand

Pizza Hut, the restaurant and fast food chain, yesterday said it intended to open more than 40 new restaurants and 60 delivery units throughout the UK over the next two years - a 20 per cent increase - creating up to 2,000 jobs.

It is seeking town-centre sites, free standing units in out-of-town retail parks and delivery units in high-street, secondary and suburban locations.

The number of pizza restaurants in the UK is rising by about 12 per cent a year with over 1,000 outlets - the fastest growing sector - increasing by about 30 per cent a year.

We're only too aware of the amount of time taken up looking after the company cars.

So, to make life easier, we've launched Business Solutions. A totally new concept from Ford, to help you manage your fleet.

We've spent £10 million on a new Business Centre, run by 60 highly trained staff.

Just one phonecall can give you access to everything you need, whether you manage two vehicles, or two thousand.

In the unlikely event we can't help you immediately, one person will make it their business to sort out your problem.

We won't pass the buck, we won't give

you the runaround and we won't forget about you. That's a promise.

We're here to help you run your fleet as efficiently as possible.

If you're looking for a Business Solution for your company vehicles, call us on

0345 23 23 23.

BUSINESS SOLUTIONS

TECHNOLOGY

Dann, Michael thinks, thumping the vehicle's control panel. It is a sunny Sunday morning and he's driving out of town to visit his parents. But suddenly, it occurs to him: it is Father's Day and he has forgotten to buy a present. What to do?

Stopping the car, he reaches forward, flicks a switch and watches a screen light up. "Computer," he says, "it is Father's Day. Suggest a present for my father."

"A tie," a disembodied voice replies.

"Oh, most original. Why?"

"He bought a suit on May 20."

"Yes, and he bought a tie to match it."

"Incorrect. He bought two."

Michael thumps the control panel. "Well, then, what in heaven's name is the point of buying him another?"

"He liked three."

"All right." Michael sighs. "Show the tie he wanted, but didn't buy."

Pause. "Show it worn by my father, with the suit."

The tie is expensive; the computer's records say this is why his father didn't buy it. But it looks good with the suit... very good.

Should do the trick.

Show locations in this area where I can pick up this tie now.

The names and addresses of three outlets appear, the last of them only a short way off Michael's planned route.

"Order this selection. Gift wrap for Father's Day. I'll collect at pick-up point three in 30 minutes. Charge to Visa. Oh, and computer?"

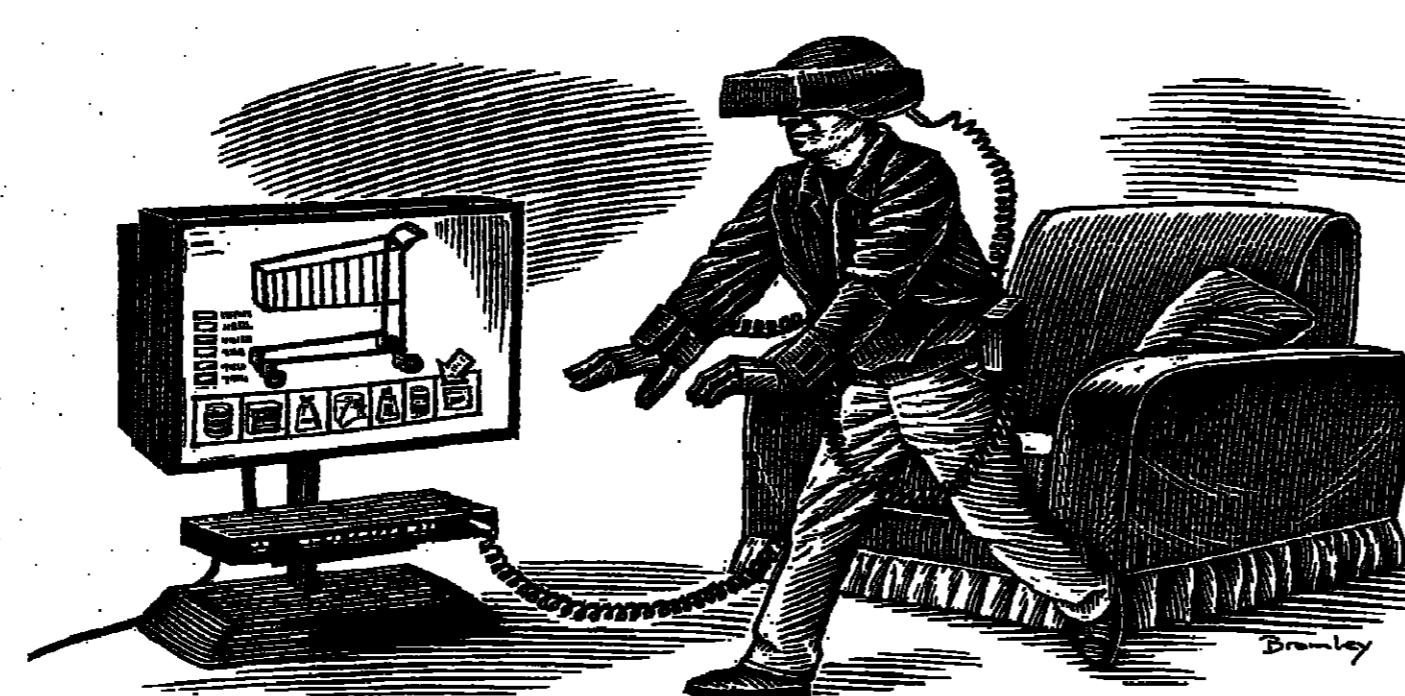

"Yes?"

This is shopping in the 21st century: when the trudge round the stores has been replaced by the speed and convenience of computer-aided selection in the home, car or office. Retailing in the traditional sense will long since have given way to fibre optic cables and multimedia technology.

Or will it? Shops may have changed over the years, but their fundamental role as places where people go to choose and buy goods is almost as old as civilisation itself. Are they really to be made redundant by electronic retailing?

Right now, it may not seem so. True, home shopping is already a reality in the US, but it is a primitive affair. Programmes offered by the two main home shopping channels, Home Shopping Network and QVC, simply parade goods in front of viewers in the hope that something might take their fancy, and take credit card orders by telephone. They account for less than 0.1 per cent of US retail sales.

But this may be about to change. With US telephone and cable television companies investing millions of dollars to provide Americans with

Shop-till-you-drop at the touch of a button

Electronic retailing is set to revolutionise buying. Richard Tomkins begins a new series with a glimpse into the future of the interactive era

two-way data communication, consumers will no longer be the passive recipients of sales pitches for goods that do not interest them. Soon, they will be able to tell their television sets to show them things they want to buy, and order them at the touch of a button.

Beyond this, it does not require a great leap of imagination to see the day when virtual reality enters the world of electronic retailing. At a simple level, consumers will be able to try on clothes at home by watching computer-generated images of themselves (or indeed, someone else) wearing them. Later, instead of watching a television screen, people will probably be able to don a virtual reality helmet and gloves, then transport themselves into the stores of their choice. They will roam the virtual aisles, examining virtual goods and quizzing virtual sales assistants for more information if required.

But what of traditional shops? Will a place remain for them in this interactive era?

The answer is almost certainly yes, for at least three reasons. One is that there are many goods that people will still prefer to touch and

feel, or try on for size, before purchasing. Another is that, until science devises a method of transporting matter instantly through space, electronic shoppers will still have to suffer the frustration of waiting for their goods to be delivered. And a third is that, in a world where so many work and leisure activities are conducted through a television screen, people may simply go crazy if they are left without an excuse for getting out of their homes.

Equally, however, it seems certain that shops will change. The accountancy firm Coopers & Lybrand, which recently conducted a \$1m (£600,000) survey of the outlook for retailing in the 21st century, predicts that stores will respond to the threat from home shopping by combining retailing with entertainment.

If, as seems likely, this proposition is correct, the US already offers a glimpse of the future in the form of Mall of America, a vast complex on the outskirts of Minneapolis combining 400 stores with a seven-acre theme park. But on a smaller scale, food stores might offer cook-

ery lessons, record stores might offer live music, or clothing stores might offer fashion shows.

This, of course, will take up space. But according to Jacqueline Bivins, marketing manager of Coopers & Lybrand's retail programme in New York, this is something retailers will have in abundance. As with electronic shopping, detailed analysis of customers' buying habits will allow retailers to build up much more accurate pictures of who their customers are and what they want. The result will be a big reduction in inventory on the sales floor.

Another space-saver could be manufacturing at the point of sale. Customers at branches of Blockbuster Entertainment, the US video store group, are already selecting compact discs or video games and having them made while they wait. Bivins sees no reason why shirts, to take a random example, or a myriad other goods, should not eventually be custom-made to order on the spot.

Technology will bring other changes, too. Those who today com-

plain that they can never find a sales assistant when they want one will probably never see one at all in the next century: instead, they will turn to an on-screen electronic assistant for advice. Men might pick a suit and ask the screen to show them images of all the shirts in the store that go with it. Women might go to the hairdresser and ask the screen to show them what they would look like with different hairstyles.

Arguably, the form of retailing that could change the most is the supermarket - not least because it is the format most likely to suffer from the home shopping revolution. The mind-numbing task of replenishing the larder with basic food-stuff is perhaps the ladder that lends itself most easily to substitution by technology. In the interactive age, it will be a simple matter for house-holders to order goods electronically for home delivery, and have the same order repeated automatically every week unless amended or cancelled.

Supermarkets, however, will undoubtedly use technology to fight back. For example, customers will no longer be required to load up trolleys with goods. Instead, stores will display just one example of each product, and customers will walk around the store with an electronic wand, waving it across a barcode on the shelf to order and pay for each item. The order will be put together by automatic shelf pickers behind the scenes, and the customer will either pick it up at the exit or have it delivered.

Things may turn out rather differently. Carol Farmer, whose Florida-based company Carol Farmer Associates forecasts consumer trends, thinks people could become so exhausted by the bombardment of visual information coming to them through their screens that they could begin to view conventional shopping as an escape.

Consumers may welcome the prospect of wandering around a quiet, relaxed, screen-free store with real humans on hand to help and advise, she says. "The atmosphere will be deliberately calming, the environment will be very soothing, because everybody will be visually brain-dead from all this virtual shopping that they can do if they want to. This sort of shopping will be the antithesis of it."

It also makes sense to be cautious when it comes to some of the wilder prognostications about the interactive future. As Farmer puts it: "I think the trend towards this kind of technology is unstoppable, but it really does depend on the makers' ability to make it user-friendly, and they haven't been very good at that in the past."

"I mean, it's still very hard to program a VCR, and VCRs have been around for years."

Plastics get tough

Construction costs could be reduced by hundreds of millions of pounds through the use of a new generation of plastic-based composite materials which are as strong as steel and concrete but much lighter and easier to handle.

A group of UK companies, led by engineering consultants Mouchel, are combining to study the practicality of using polymers reinforced with carbon and glass fibre to strengthen bridges.

They claim it would be possible to save £130m by using carbon fibre polymers instead of steel to strengthen 1,000 out of the estimated 10,800 British bridges that will require reinforcing to meet European Union 40-tonne weight restrictions.

The three-year study, costing £1m, has attracted £25,000 of government finance under the Link Programme which supports collaborative research between industry and universities.

Mouchel is providing 60 per cent of the private-sector contribution with GEC, the big British engineering group, providing a further £100,000.

If the project develops a practical technology, it could promote export orders as well as rebuilding an important part of the country's infrastructure.

The companies, which will be working with Surrey and Oxford Brookes universities, will be seeking to build on work by Urs Meier of the Swiss Federal Laboratories for Materials Testing and Research who demonstrated in the mid-1980s that it was possible to double the strength of a 150mm concrete beam by adding a 0.3mm carbon fibre reinforced polymer strip.

Andrew Taylor

MANAGEMENT: MARKETING AND ADVERTISING

Businesses have not caught up with increased consumer confidence over telephone use, writes Diane Summers

Time for companies to ring the changes

The telephone, as a marketing tool, has come of age. This may seem strange, given that the phone has been around for about 100 years and looks like old technology next to interactive superhighways and all the other communications developments on the horizon.

But it is only now, according to a study on phone potential for business in the UK by the Henley Centre forecasting group, that telephone technology "has finally reached critical mass in terms of consumer confidence, use and attitudes towards it".

The trouble is, reports Henley, that businesses have not caught up with this development in "teleculture": they continue to make customers hang on, subjecting them to unwanted music and then "ping-ponging" them between departments.

First Direct, Next and Direct Line are among the exceptions to have seen the potential for telephone-based businesses, says Henley. In the financial services sector alone, previous studies have suggested that as many as 30m calls a year are abandoned by customers who get fed up with waiting or who are met with unhelpful staff. Melanie Howard, Henley's head of direct marketing studies, says: "The amount of business companies are throwing away must be enormous. We found, for example, that only 14 per cent of people would definitely call back if they couldn't get through when responding to an advertisement."

Overall, Henley reports that interviews with 500 senior managers across a range of sectors show "there is little evidence that despite spending an estimated £10bn per annum on telephone contact, in sales, marketing or customer service functions, and employing nearly 1m dedicated telephone staff, that any more than a few companies are experiencing the real benefits reported by the more advanced users - increased customer loyalty, revenue maximisation and a competitive edge".

Evidence that the "teleculture"

Who keeps you hanging on?

UK businesses answering calls within three minutes (%)

in the UK ("phone usage in the UK is about four times greater") comes from group discussions and interviews with 1,000 consumers conducted in March for Henley. As would be expected, professionals and more affluent households are more likely to enjoy using the phone and employ it to buy goods and services. However, individual attitudes to the phone cut across socio-economic groupings and are more significant in predicting usage, said Henley.

Four distinct groups were identified:

- Telephiles, who make up 47 per cent of consumers, are confident and frequent users of the phone to do business. They are relatively positive about being called by companies, as long as they can see something in it for themselves. They agree more than other groups that they would buy again from a company that keeps in touch, that companies should check to find out if customers are satisfied and should ask consumers for their opinions of new products and services.
- Telephones, 16 per cent of phone users, are the "phone as little as possible and are more likely to be younger and more downmarket. Fewer of them work full time. They are particularly negative about receiving calls from companies.
- Functionals, 15 per cent of the market, do not positively enjoy the phone as much as telephiles.

*Teleculture 2000. The Henley Centre, 9 Bridewell Place, London EC4V 5AY. Price £1,100

Anxious American homeowners outside a bizarre, but beautiful building in an otherwise unexceptional suburb of Basle. He is an architect on business in Switzerland, he explains, has come specifically to see the building and wants to look inside.

The object of his obsession was designed by Frank Gehry, the North American architect, for Vitra, the office furniture group which is one of the finalists in the 1994 European Union Design Prize due to be awarded tomorrow in Amsterdam. The building opened last month as Vitra's corporate headquarters and is the latest addition to the stunning collection of contemporary architecture it has built at its main manufacturing site in Weil am Rhein, just over the border in Germany.

The American's fascination with the new headquarters building is as intense as the interest generated by the Weil complex, which attracts 40,000 visitors each year, many of whom are architects or students who might eventually buy Vitra's products.

The complex contains the work of some of the world's most influential architects. There are two factories by Britain's Nicholas Grimshaw, a conference centre by Tadao Ando of Japan and a Frank Gehry museum to house the company's 20th century chair collection. Even the fire station is an architectural gem - a spectacular composition of abstract concrete planes devised by Zaha Hadid, an Iraqi architect working in London.

Rolf Fehlbaum, chairman of Vitra, is a self-confessed architecture buff yet says the Weil site is not a self-indulgent exercise but an integral part of Vitra's strategy of establishing itself as a leader in the office furniture market. "This isn't a folly or a fantasy," he says. "It's part of the company's culture. It's a financially feasible project which sends out a clear message to our customers about what the company stands for."

Vitra's building binge began in 1981 when part of the original Weil site was destroyed by fire. The company, founded in 1954 by Fehlbaum's father, was then the European manufacturer for Hermann Miller, the US furniture group. It had already commissioned a few office chairs from contemporary designers and in the early 1980s was using advanced equipment or specialist telephone numbers - continue to put all calls through their general switchboards.

Overall, Henley finds that, while consumer demand for good telephone services is high, customers' expectations are low. "This suggests that businesses can relatively easily improve the service they provide over the phone, and to do so would have a very positive impact on consumers."

The new Vitra needed to carve out an independent identity. The Fehlbauers, impressed by Miller's long liaison with influential designers such as Charles and Ray Eames, were determined to place Vitra at the forefront of technical and aesthetic innovation and needed to

convince contemporary designers of the same calibre as the Eameses to work with them.

The reconstruction of the Weil site became a central element in that strategy. Rolf Fehlbaum deliberately commissioned a special set of buildings. The Vitra complex includes the first European buildings of Frank Gehry and Tadao Ando. It also houses the first permanent buildings by Zaha Hadid and Nicholas Grimshaw. Fehlbaum says the total cost of the factories (including architect's fees) was roughly the same as standard buildings of that type, but admits the Hadid fire station and Ando conference centre were more expensive at DM2.6m (£1.04m) and DM2.5m respectively.

Vitra has already recouped some of its investment. The museum, which cost DM2.5m to build in 1982, now earns two thirds of its running costs. Vitra also attracts a steady stream of publicity in the architectural press from the opening of new buildings or museum events.

The new Vitra needed to carve out an independent identity. The Fehlbauers, impressed by Miller's long liaison with influential designers such as Charles and Ray Eames, were determined to place Vitra at the forefront of technical and aesthetic innovation and needed to

convince contemporary designers of the same calibre as the Eameses to work with them.

Jasper Morrison and Ettore Sottsass. "If Rolf Fehlbaum wants a new factory or a fire station he goes to the best people in the world," says Stark. "Everything about Vitra is done to the highest possible standard. That's why I work for it."

Fehlbaum also believes that the company's product development skills have been enhanced by the experience of collaborating with different architects. "Designing an office chair is a complex process of trial and error that requires a great deal of fine-tuning," he says. "It's good for us to work with different people."

Similarly Vitra has benefited from the museum, which has not only encouraged employees to learn more about their industry's history but has acted as a catalyst for long-term research. Vitra last year asked Sottsass and two other Italian designers, Andrea Branzi and Michele de Lucchi, to analyse how technology would affect the offices of the future for a Citizen Office exhibition.

"Vitra is a company with vision," says Stark. "It's never satisfied with the present and is always looking to the future."

Vitra's new headquarters is one of the finalists in the 1994 European Union Design Prize due to be awarded tomorrow

Bob Fisher promoted at TI

Bob Fisher, 55, chief executive of John Crane, one of TI's three core businesses, has been appointed managing director, operations, of the TI Group.

Fisher's new job as TI's effective chief operating officer is part of a board reshuffle which still leaves unclear who is the front-runner to take over as chief executive when chairman Sir Christopher Lewiston, 62, eventually splits his role.

The chief executives of Crane and Bundy, two of TI's three main businesses, will now report to Fisher, who will be based at TI's London office. He has been given the task of "leveraging the resources" of the group across all its core businesses and will also be responsible for developing TI's regional strategy for Asia Pacific.

One city analyst suggested that Fisher's appointment indicated that he was the chief executive designate. However, other analysts disagreed, noting that Tony Edwards, 49, chief executive of TI's recently acquired Dowty aerospace business, will continue to

report to the chairman. Meanwhile, Brian Walsh, 50, GKN's former finance director who joined TI just over a year ago, has been promoted to the new post of vice chairman. Walsh adds responsibility for the operations of the group's headquarters to his finance director's role.

Bundy chief executive John Potter, 51, takes over from Fisher as chief executive of Crane and will move to Crane's Chicago headquarters. Bill Laule, 45, president of Bundy North America, is moving to the UK to take over as chief executive of Bundy.

James Roe, 49, director of strategic development for six years, also joins the TI board. He adds global responsibility for human resources and communications to his current job.

Insurance moves

■ John Swinglehurst, formerly chairman of Sedgwick's marine and energy operations, has been appointed deputy chairman and BAIN CLARKSON's marine and energy divisions.

■ John Winter, formerly ceo of TIRIS Insurance, has been appointed md run-off services of MERRETT Underwriting Agency Management.

■ Roberto Gavazzi, a member of the board of management of Allianz, has been appointed to the board of its subsidiary CORNHILL INSURANCE.

■ Colin Donadio has been appointed md of SEJ International, and Tony Scott and Geoffrey Verey directors of SEJ Marine Reinsurance Brokers.

■ Tim Breedon has been promoted to the board of LEGAL & GENERAL Investment Management as director (quantitative funds).

■ Peter Snow, md and joint coo of ALEXANDER HOWDEN's marine and energy division, has been appointed to the main board.

■ Roger Cottell has been appointed md of The Ajax Insurance Association, part of NORWICH UNION.

■ Christopher Mathew, formerly a director with Standard Bank Financial Services in South Africa, has been appointed international sales director of CML part of CLERICAL MEDICAL Investment Group.

■ Keith Gibbs, formerly

marketing director at Citibank, has been appointed marketing director of LLOYDS BANK Insurance Services.

■ Anthony Swinglehurst has been appointed md marine, and Andrew Sturdy, Robert Terry, Tim Page and Patti Muir directors of ALEXANDER HOWDEN Reinsurance Brokers. Mark Heath, Poni Arumugam, Rona Hogan, Tim Ramsey, Les Vaughan, Mark Wood and Jon Regan have been appointed directors of Alexander Howden Ltd.

■ Michael Painter, chairman and chief executive of the international and risk management division of Bowring Marsh & McLennan, is being seconded to the DTI to "assist government to gain a fuller understanding of the [insurance] industry's needs".

■ Jeff Painter has been appointed general manager (quality and continuous improvement) at SUN LIFE. He is succeeded md of Sun Life Direct Marketing by Des Moore (below).

■ Bernard Bradford (above right)

is to become the first full-time general secretary of Insol, the London-based organisation for insolvency professionals around the world.

Bradford, who is currently head of corporate recovery at National Westminster Bank, will take up the post in March next year in place of Gerry Weiss.

Bradford retires from NatWest this month after a decade of working on large-scale international insolventcies including the Maxwell affair, Daf and Lancer Boss.

Insol, which was formed 12 years ago, has more than 5,000 accountants, lawyers, bankers and other members in 34 countries.

Roger Lawson (above left) took over yesterday as president of the Institute of Chartered Accountants in England and Wales. He was the first president to be elected in a contested vote under new rules introduced three years ago.

Lawson, 45, who is a director of 3I, will serve for a year in office.

The new deputy president is Keith Woolley, 53, a practitioner based in Bath. Brian Currie, a retired partner from Arthur Andersen, becomes vice president.

Bodies politic

John Spiers, chairman of Brighton Health Care NHS trust, has been appointed to the prime minister's Citizen's Charter Advisory Panel. Since 1970 he has founded and developed a number of publishing firms, one of which received the Queen's Award for Export Achievement in 1986.

He replaces Sir Christopher Bland, former chairman of London Weekend Television, a member of the advisory panel since it was created three years ago.

Lady Wilcox, the businesswoman who chairs the National Consumer Council, has been reappointed for two more years to the panel, which advises the government on the citizen's charter. Madsen Pirie, president of the Adam Smith Institute, has been reappointed for a further year. Christopher Swan, head of marketplace performance at British Airways, has also been reappointed, though only until the end of July.

The panel is chaired by Sir James Blyth, chief executive and deputy chairman of Boots. Other members are Angela Heylin, chief executive of Charles Barker, Baroness Perry, president-elect of Lucy Cavendish College, Cambridge, and Nick Rawlings, director of PA Consulting Services. (See Observer)

■ The Accounting Standards Board yesterday announced the names of three new members and said it would be adding an extra person to bring the total up to ten.

Huw Jones, a director of Prudential Portfolio Managers, Ken Wild, a partner with accountants Touche Ross, and Geoffrey Whittington, professor of accounting at Cambridge University, will join the board from August.

In addition, the board is seeking an additional member from a multinational company, in a move that will tip the balance more towards preparers of accounts.

■ David Hardisty, md of Close Asset Finance, has been appointed chairman of the FINANCE & LEASING ASSOCIATION.

■ Walter Hobbin, chairman of Taylor Woodrow International, has been appointed president of the EUROPEAN INTERNATIONAL CONTRACTORS FEDERATION.

Putting imagination to work

**imagine a microprocessor
that makes Windows NT fly.
Alpha AXP does it now.**

You're going to blaze some new trails with the mainframe power of Windows NT™. Don't compromise it. Run it on

the fastest vehicle you can get - an Alpha AXP™ microprocessor. Choose from a family of fast server microprocessors with performance as high as 170 SPECInt, more than twice that of Pentium™ or PowerPC™ - and priced to compete. Or choose from low-cost desktop PC microprocessors with prices that start below an i486™.

Alpha AXP runs Windows NT with thundering speed, with hundreds of Windows NT applications shipping now and hundreds more on the way. Plus Alpha AXP runs your existing 16-bit DOS/Windows™ applications. All this power

is part of a long-term architecture based on a scalable RISC design and standards like the PCI local bus. And it's available to any PC maker - from us now, and soon from our second source Mitsubishi Electric Corp. The decision with Windows NT is simple. On other microprocessors, it runs. On Alpha AXP, it flies. Which way would you rather cover new ground? Call your PC maker and ask about the Alpha AXP family.

Or call your local Digital office for more information. And kick start your future.

Controlled spleen

Watching Krzysztof Kieslowski's *Three Colours: White*, I kept thinking of the title of that book by Ayn Rand: *Atlas Shrugged*. For years this Polish filmmaker has born the hopes of European cinema on his lone shoulders, each film more of a grand tragicomic shunt than the last. He now tells us - biggest shrug of all - that he is retiring from movie-making altogether. Is European film prepared for free fall?

Perhaps the signs are already here in *White*. Like *Blue* before it and *Red* to come, the film is a strip torn from the French tricolour flag. This time the theme embroidered is "grief".

The dumpy hairdresser from Warsaw, Karol (Zbigniew Zamachowski), so loves the French girl he married six months before that he keeps flashbacking to that orgasmic flit of a wedding veil and white dress in a Paris church. Alas! That was the couple's only consummation to date. Unmanned by that well-known disease, "emigrant stress" - the inability to function in another country - Karol sits by, impotent in all senses, as pretty, spiritual Dominique (Julie Delpy) first obtains a divorce and then burns down their hairdressing shop.

Kieslowski and regular co-writer Krzysztof Piesiewicz shape what follows as a kind of berserk little-man-makes-good tale. Karol returns to Poland to rebuild his life and fortune - in shady real estate deals - after first failing death and assuming a new identity. Once rehabilitated, can he lure Dominique back to his arms?

My own arms were tugged near to dislocation by opposing demons. The nice demon said: This is a sour, clever, funny satire on the new capitalist spirit in Eastern Europe, a place where everything can be bought from fake passports to dead bodies. The nasty demon, pulling

my other arm, said: This film is intellectually and dramatically slight, at least by the high standards Mr K himself has set.

I must agree with both demons.

White is a master-class in controlled spleen and social-psychological irony compared with most modern European films. But Kieslowski has set our hopes of *him* too high. The trilogy's first film, *Blue*, had a passion of sound, texture and image that bordered on the miraculous. Surrounded by an Expressionist force field, the film's protagonist, Juliette Binoche, who makes a fleeting guest appearance in *White*, seemed gripped by anxieties we all recognised even when her beautifully gnomic face seemed to say nothing.

White changes mood, changes structure - more linear-anecdotal - and most crucially changes cameraman. Edward Klosinski is not a colour-filler freak like Slawomir Idziak (*Blue*, *Red*, *The Double Life Of Veronique*). The near-monochrome beauty of his images suits the sly, downbeat comedy of *White*. But that downbeat comedy, shorn of stylized flourishes, does not suit a feature film. *White* would have made a

good short story in the *Decalogue* series. Even its ending, where "equality" between the sexes is delivered with a clinching sour-sweet irony, seems more suited to the punchline technique of short-story closures than to the sense of echoing questions with which a feature film - above all, a Kieslowski feature film - should leave us.

* * *

Serial Mom is the latest American movie about the corruption lying beneath the smiling face of suburbia. How the nation's film-makers are obsessed with this! If you laid *Mom's* writer-director John Waters (*Mondo Trasho*, *Female Troubles*, *Hairspray*) end to end with David Lynch, Penelope Spheeris, Joe Dante and the rest of the "humbashers", you could walk over them all the way from Baltimore, *Mom's* setting and Waters' home town, to that greatest of all jumpled-up suburbs, Hollywood.

Kathleen Turner flexes a mean pair of dimples as Beverly Sutphen, housewife-superkiller. She runs over a teacher. She skewers her daughter's jilting boyfriend (look away when his palpitating liver emerges on the end of her weapon). And raiding the fridge, she brings a lamb to the slaughter of a woman neighbour who refuses to rewind her videos.

But the main murder victim is the film, done in by its own vacillations between dainty spoofery and bad-taste excess. The killing sprees belong to a different movie from the *Ideal Home* satire ruling elsewhere. In this heroine's house the furniture, wallpaper and dialogue are all in matching tones and the reactionary family-values pieties are also witty in place. Best of all is the yet-unsuspected Beverly's show of chagrin over Our Lord's refusal to commit himself about capital punishment, even on the cross. "If ever there was a time to go on record about the death penalty..."

Say what you like about *The Crow*, it has a consistent style: MTV Gothic. Pour in that chiaroscuro; jump around with that camera; growl out that music, not so much heavy metal, more scrapyard noises from hell.

But an irony sits, like the title bird, at the centre of this tale of a rock star back from the grave to avow his own murder. On screen Brandon Lee's chalk-faced hero spends scene after scene bouncing back after being hit by real bullets.

Off screen the star, son of the also

prematurely-departed Bruce, died

from what should have been a fake

bullet; but the gun had a fragment of metal still lodged in its barrel. Lee was rushed to hospital; and soon after, he was being rushed into hospital for legend.

The film will make no one immortal. Set in a nameless inner city on Halloween night, it looks like *Deltacessen* crossed with *The Munsters*. Events veer between the banal and the incomprehensible. And with Lee's role padded out with stunt double shots and hide-and-seek shadow play, Michael Wincott's gravel-voiced smoothie of a villain walks into the clear patches of light and steals the film.

I wish someone had stolen Patrick Keiller's *London*. This feature-length essay on the city is diffidently tweaked towards fiction by a narrator's overvoice. While the static images click past like a lantern slide lecture - the famous buildings, rotting factories, gloomy riverways - Paul Scofield's nameless "I" describes a series of exploratory walks taken with gay friend and omniscient London expert "Robinson".

The script has an appealing stock of comic ironies and literary allusions: Rimbaud, Baudelaire, Defoe. But they are regularly rolled over

by the film's political agenda, caterpillar-treading through racism, Thatcherism, homelessness and all the other too familiarly crushable targets of Nineties enlightenment.

In Custody is better, but only just. The directing debut of producer Ismael Merchant, its tale of an ageing Urdu poet (Shashi Kapoor) dealing with life, age, wives and - worst of all - interviewers has some of the lapidary grace of conferee James Ivory. I only wish it had some pace too. Like so many post-Satyajit Ray Indian films it suffers from that ruthless syndrome: subcontinental drift.

'Egalité' embroidered: Julie Delpy in 'Three Colours White', the second part of Kieslowski's trilogy on the French flag

Face the music and skate

When Torvill and Dean are competing, as everybody knows, their artistry transcends competition. When they are giving professional performances, however, you realise that competition is what they most need. For it is competition, ironically, that brings out their best artistry.

Some half-dozen of the duets they have created for competition are classics - potently expressive images of male-female partnership on a level rare in any art, and unique in their genre. And they themselves are a rare partnership, though - for they are only interesting when together. Astaire and Rogers, Fonteyn and Nureyev, Sibley and Dowell were all supreme soloists too, who could sustain major careers apart from each other. Not so Torvill and Dean - who, apart from each other even for a minute or two, are unremarkable either as personalities or as ice dancers. Their new world tour gives them very little solo exposure, but just enough - in a Beatles anthology. *Popbook Sixties* - to prove this.

And they are not an invariably thrilling partnership; the duet that finally brings them together at the climax of this Beatles collection is fairly blah. You cannot even say (as Katherine Hepburn said of Astaire and Rogers) that she gives him sex while he gives her class.

The Midas touch that sometimes turns these two pleasant but uninspiring individuals into a joint icon of the sublime is the tight specification of competitive ice dancing: never more than a yard apart from each other; no flamboyant high

lifts; a steady supply of virtuosity amid a non-stop flowing legato journey around the ice... It is now more than 12 years since Torvill and Dean first took those challenging limitations and turned them into a transporting image of the inseparability of man and woman. If there is just one thing that sets them apart from other ice partnerships, it is musicality. (Why is this so rare on ice?) As the climax of another big ensemble piece to music from Off's *Carmina Burana*, they dance a duet. "In Trutina." Not

Can Torvill and Dean go beyond the competition stakes? asks Alastair Macaulay

on their best level throughout, but with some long and heartstopping phrases wedged to the flow and pace of phrases in the music. At one peak, Dean holds her high, and her gesture into the air above exactly hits its climax with the music; and then, while the same phrase continues, Dean lowers her and holds her, immobile and horizontal, like a steel bar across his chest; and the phrase contains other marvels too.

The choreography is credited to Torvill, Dean, and Andris Toppe. Nineteen other skaters are involved in solos, duets and larger ensembles. The mood keeps changing from comedy to virtuosity to lyricism; a *Strictly Skating* medley

makes some OK jokes about the usual tackiness of ballroom forms on ice in very *Strictly Ballroom* vein; and the evening's programme is a passable mix of showbiz and acrobatics. The naughtiest excess of ice dance are avoided; but its raw potential for poetry is only present in the T & D duets.

But there are too many jokes about competition marks, too many references to competition triumphs. Years ago, John Curry swept straight out of competition format to prove himself a major lyrical on ice, and built up a company of like-minded skaters. Can Torvill and Dean go beyond their competition successes? The pattern of their career - and the fact that all their best numbers have been made for competition - suggests not.

This programme begins with the *Bolero*, includes *History of Love* and medley of *Barnum*, the *Paso Doble* and *Mack and Mabel*, and ends with *Let's Face the Music and Dance*.

Musically apart, Torvill and Dean are an outstanding choreographic example of male-female cooperation. Whether in the sweeping tragic glory of *Bolero* or the chugging robust vivacity of *Mack and Mabel*, you can see how often Torvill propels Dean as well as vice versa. Often they become intricately interdependent. In one phrase of *Bolero* she arches back over his body, facing up to the ceiling, and yet it is her feet, lightly running on point, that are propelling them both. Breath-taking, no matter how often you see it, and seriously moving.

At Wembley Arena until June 22

Christie nailed some angst on to Shostakovich's second string quartet. This is music too serious to be maltreated as a guide to despair from Mittel-Europa. Christie is a follower of Jiri Kylian, and the piece is another of those "Bad news from the Old Country" exercises in which girls in dull dresses have hell with their men friends. At the end, the four members of the cast, having suffered all over the stage, stand in a blaze of light as if awaiting a firing-squad. The marksmen would do better to draw a bead on Christie.

Last, and by every means least, *In the Glow of the Night* by Choo San Goh. I have reported over the years on Choo's creations, which never struck me as being choreography. Like the ten dollar Patek Philippe watches you find in the Orient, they bear a slight resemblance to the real thing, but they don't work.

Choo was for some years the creative force for the Washington Ballet - which explains a thing or two - and *In the Glow of the Night* is dreadful on all counts. Three movements from Martinu's first symphony, pink and blue leotards, pointless activity, are the ingredients. The lighting changes on an amorphous backdrop, but nothing changes in the trumpery steppings and emotions that occupy the cast: rodomontade and witless posturings are their lot. Worse, the dance makes its performers look inept: seven men slog through academic steps; the women seem prissy. It is no advertisement for the company's hopes or attainments.

Sadler's Wells until June 14

Dance/Clement Crisp

The Washington Ballet

Enter, blowing its own trumpet, rather too loudly - twenty-two beautifully trained dancers; one of the most exciting and imaginative repertoires of any ballet company performing today - the Washington Ballet. What I saw at its London debut on Tuesday night was a small ensemble, whose women have a decent academic style, trapped in decent academic frames, which leave no cliché unexplored and are an invitation to immediate flight from the theatre.

The evening began with a new work by Graham Lustig, the troupe's resident choreographer. *Hearts of Light* is set to Tippett's *Covelli fantasy*, music which I find claustrophobically busy, as if one were trapped in a small room with an over-vivacious companion. Lustig, always sensitive to his scores, has produced dances of a kind generally called "lyrical" - the girls wear drifting skirts - and has sought to match every convolution of the music. The result is carefully crafted but relentlessly active, and nothing is helped by imprisoning the dance in a black surround. Six girls dash and drift. Three men are in attendance, lifting and being carried, like well-mannered furniture removers. It lasts forever.

Things thereafter rush into Gadarene decline. There was no point, because no illustrative vitality, in Christopher Doyle's *Ne me quitte pas*, where Doyle, in shirt and trousers, gloomed after Francoise Thouveny in a little black dress, while a tiresome song by Jacques Brel took its course. It was followed by *Quartet No.2* in which Nils

conducts by Aldo Ceccato (01-337 0100)

Teatro Lirico La Zarzuela. The next production is *Wozzeck*, opening on June 20 in a production featuring Anja Sijsla and Graham Clark (01-429 8225)

■ MILAN

Teatro alla Scala Tonight, Sat, next Mon, Wed, Fri: Riccardo Muti conducts semi-staged performances of Don Giovanni, with cast including Luciano Pavarotti and Plácido Domingo. Tomorrow: Rafael Frühbeck de Burgos conducts Philharmonia Orchestra in works by Glazunov, Tchaikovsky and Rimsky-Korsakov, with piano soloist Horacio Gutierrez Sun: Off's *Carmina Burana*. Wed: Young Musicians Symphony Orchestra and Chorus in works by Walton and Holst. June 17: Maurizio Polini (071-928 8800)

Barbican Tonight: Kent Nagano conducts LSO in works by James Ellis, Mozart and Stravinsky, with soloists Victoria Mullova and Yuri Bashmet. Tomorrow: Yuri Temirkanov conducts RPO in Strauss, Mozart and Rachmaninov, with violin soloist Zino Vinnikov. Sun: Nagano conducts LSO in Ravel, Berlioz and Stravinsky, with viola soloist Yuli Basmash. Tues: Howard Shelley and Michael Roll open a cycle of Beethoven piano concertos with London Mozart Players. Wed: Icelandic Choir in Bach's B minor Mass. June 17: Felicity Lott and Ann Murray (071-638 8891)

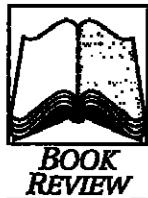

■ SPOLETO

This year's festival runs from June 22 to July 10. Highlights include a staging of *Wozzeck* by avant-garde German producer Gunter Kramer and a Poulenec double-bill pairing Busoni's *Turandot* with Stravinsky's *Perséphone*. The staging is by Fabrizio Clerici and Enrico D'Alessio, and the cast includes Sabine Hess, Paul Frey and Fanny Ardant. Repeated June 11, 13, 15, 17, 19 (041-521 0161)

■ VERONA

Arena The season runs from July 8 to September 3, and includes performances of Norma, Otello, La bohème, Aida and Nabucco. Plácido Domingo will sing the title role in Otello on August 5 and in a special gala on August 9 (Booking by letter: Ente Lirico Arena di Verona, Piazza Bra 28, 37100

In the long run, Keynes is still dead

Unlike a starry-eyed reviewer for *The Economist*, I feel no urge to nominate Paul Krugman for a Nobel prize. Krugman has a rare gift for conveying complex ideas in simple, entertaining prose. But his central argument – that a revised version of Keynesian theory has superseded conservative economics – is too wrongheaded to deserve support.

The best parts of the book deal with new theories. The chapter on "QWERTY" economics is vintage Krugman. The top line of keys on a typewriter, he notes, reads QWERTYUIOP. This choice is not particularly easy on the fingers. It just happened to be chosen by the first makers of typewriters. But since typists learned their trade on QWERTY machines, future manufacturers had to cater to their needs. As a result an inefficient keyboard design quickly became "locked in".

Krugman believes the structure of modern economies is heavily influenced by such accidents of history, just as a wise bureaucrat could, in principle, have stipulated a more efficient keyboard so, today, judicious industrial intervention could improve on unfettered market outcomes.

He also recounts the supposed death blow to conservative macroeconomics dealt by George Akerlof, a Berkeley economist. Akerlof pointed out that most economists assume people are totally rational. But in the real world it is irrational to be perfectly rational because you would spend forever collecting the information needed for an efficient decision. Most people are thus slightly irrational. But the collective results of slight irrationality can be devastating. For example slight deviations from rationality might lead workers to refuse even small wage cuts. But if everybody refuses to adjust, the result is high unemployment and widespread economic dislocation – something nobody wanted.

The root argument here is that the cumulative result of individually sensible decisions can be serious inefficiencies

PEDDLING PROSPERITY

By Paul Krugman
WW Norton, \$22, 303 pages

and, occasionally, disasters such as the Great Depression. To Krugman and friends, such reasoning provides a powerful theoretical justification for government intervention – both to prevent or ameliorate recessions and to improve industrial structure.

While admiring Krugman's style of argument, I find the book neither consistent nor ultimately convincing. Just consider the plot. Krugman spends the best part of a decade poking holes in the classical theory of free trade, gaining in the process a reputation as one of leading "new Keynesians". The general tenor of his work inspires future policy makers such as Laura D'Andrea Tyson, the White House chief economist, and Robert Reich, the labor secretary. Once in power they try to implement more interventionist policies. Now Krugman pulls away the rug, declaring that he always believed that free trade, in practice, was the right approach: Clinton officials have just failed to grasp the subtleties of his argument. Isn't this a bit rich?

There is an ugly twist to the story. Krugman is not content to attack the arguments of "policy entrepreneurs" – his pejorative term for Reich and other supposedly shallow thinkers. He is an unabashed "credentialed" – a snooty professor who believes that only people with the right paper qualifications deserve to be taken seriously. He pulls academic rank on Reich, telling readers that he has no formal training in economics and was only a lecturer at Harvard. Krugman, of course, is a full professor at MIT.

In a similar vein, he attacks Robert Bartley, editor of the Wall Street Journal, and a peddler of a different kind of prosperity in the early 1980s. Instead of confining himself to an economic critique of Bartley's tax-cutting philosophy, he relates how Bartley "began work as a reporter at the age of 22". How absurd, in other

words, to pay him any attention: he does not even have a graduate degree.

More important, Krugman exaggerates the significance of the revival of Keynesian theories. We have already seen that he violently opposes any attempt to draw practical policy conclusions from QWERTY economics – perhaps because he knows that "government failure" is usually a more serious problem than "market failure". The only moral he draws from the new Keynesian macroeconomics of Akerlof and others is that central banks must lower interest rates during recessions. Big news. Would Alan Greenspan, the Federal Reserve chairman, and a lifelong conservative, disagree?

I would hate readers to gain the impression that an intellectual revolution has occurred in which Krugman and friends have vanquished the arguments of conservatives such as Milton Friedman. It just is not true. Indeed, the striking thing is how much conservative economics Krugman now accepts.

In 1968 Friedman argued that there was no long-run trade off between inflation and unemployment. Attempts to maintain unemployment below a "natural rate" would simply lead to accelerating inflation. The argument was rejected by most academics, including Krugman's mentor – the leading Keynesian at Harvard and MIT. The economic misery of the 1970s was largely caused by policy makers' vain attempts to refute Friedman's logic.

Now Krugman, the new Keynesian, describes Friedman's argument as "one of the decisive intellectual achievements of postwar economics". He also accepts that inflation is essentially a monetary phenomenon, that fiscal fine-tuning does not work, that high taxes destroy incentives, that government regulations undermine business, and that trade should not be managed.

How peculiar then that he should write so contemptuously of the "moral and intellectual decline of conservative economics". If this is decline, perhaps we should have more of it.

Michael Prowse

Britain this summer is suffering from a series of anniversaries. One of the grandest is the 300th anniversary of the Bank of England. Central bankers have always been lavish in mutual appreciation, and 150 other central bank governors are in London for the occasion. They have been entertained at Buckingham Palace and attended a closed concert at the Barbican, where they heard Walton's *Biblical Feasts*: a feast which was interrupted by the appearance on the wall of the mysterious words "Mene, Mene, Tekel" and "Parsin" which foretold the destruction of Babylon. They pay for it all today by participating in an academic conference on central banking.

The Bank of England is not quite the oldest central bank. The Sveriges Riksbank was founded 26 years earlier in 1668. The Bank of England was the government's bank from the beginning, as it was established to raise £1m for William of Orange, whose main interest in the funds it could provide for his native country's war against France.

What gives central banks their unique function is their monopoly of the note issue and their role of lender of last resort to the commercial banks.

The Bank of England was not a real central bank in its earlier years. It did not acquire a full monopoly of the note issue until Robert Peel's Bank Charter Act of 1844, and did not take on full lender of last resort obligations until the Overend, Gurney crash in the late 1860s.

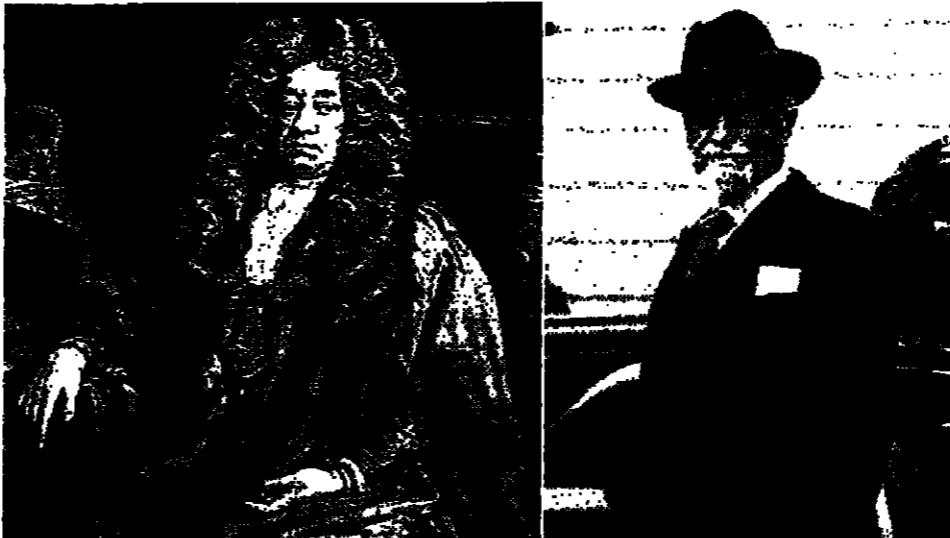

The most famous governor the Bank has ever had was Montagu Norman, who both reigned and ruled from 1920 to 1944. Norman became a *bête noire* in political circles, as he was blamed for forcing Winston Churchill to return to gold in 1925 at the 1914 parity, and for resistance to Keynes's anti-depression policies.

There was no way the Bank could have avoided postwar nationalisation. But the Bank wasted a golden opportunity in the pre-nationalisation discussions, when it had a chance to seek clearly defined responsibilities but confined its attention to the narrow question of statutory powers over other banks. As early as 1945, the governor of the Bank of Canada, Graham Towers, wrote to Lord Keynes: "The half-way arrangement under which the central bank is neither a department of government nor pure and simple, nor directly

ECONOMIC VIEWPOINT

The zenith of the central banks

By Samuel Brittan

Sir John Houblon (left), the Bank's first governor in 1694, and Montagu Norman, the most famous

responsible to the public for its actions, may contain the worst elements of both worlds."

There was then a long post-war period when fiscal and even incomes policy had precedence over monetary policy. Even when the latter came back into favour, central bankers were hamstrung by official insistence that they stick to monetary rules by which they were unconvinced.

Central bankers are now, however, at a peak of prestige, having benefited from the widespread loss of faith in government. The last word in mainstream economic wisdom is that it is credibility, rather than targets, that matter, and this is best achieved by leaving central banks independent of government control to achieve price stability by methods of their own choice. But, like Belshazzar, they will be hard pressed to sustain their present eminence. Although they have gained in relation to governments, they have lost in relation to markets.

How do central banks intend to carry out their monetary responsibilities? Michael Prowse explained in the Financial Times on Monday that the Fed operates according to two unpublisheable rules: it will raise short-term interest rates if real economic growth appears likely to exceed the annual 2½ to 3 per cent it regards as sustainable; and it will also raise rates if inflation shows any sign of rising above the current level of just under 3 per cent. Mervyn King of the Bank of England has explained explicitly that the Bank's policy is based on a projection of where

lead given by bond markets rather than take the initiative.

Indeed, some analysts are suggesting that the whole development of central banking has been a mistake. There was always a free banking school that queried the central bank monopoly of the note issue. This has been joined in modern times by advocates of currency competition, not only between national currencies, but between private enterprise ones as well. "Why should banking be treated differently from any other industry?" has been the cry.

Until recently I had been put off the free banking movement because its members had no reply to two questions:

• What prevents the competitive supply of money today, given that the official restrictions apply only to notes and coin, and that the overwhelming part of the money supply consists of deposits and financial liabilities of various kinds?

• How can the unregulated banks, say of Scotland in the early 19th century whose experience is so frequently cited, really have been competitive suppliers of money when their notes were convertible into

gold and silver, which were then seen as true currency?

I have, however, at last discovered an economist, David Glasner, who faces these questions head on, without a trace of the crankiness which often affects writers of this school.

The author's answer to the first question is to accept that financial markets can and do create many different kinds of money, even though that money is denominated in terms of the coin of the realm. He cites the development of the Euro-currency markets as an outstanding example. His argument with the central banks is that these developments should be accepted, not fought Canute-like.

But in contrast to many free bankers, he accepts that there must be a stable non-inflationary form of base currency into which reputable bankers should be prepared ultimately to convert their deposits. He proposes, following many turn-of-the-century economists such as Alfred Marshall and Irving Fisher, an adjusted Gold Standard whereby government currency becomes once more convertible into gold, but at varying rates calculated to stabilise the general price level.

Obviously the idea needs more analysis. Meanwhile the heretics provide persuasive critiques of the habit of monetary authorities of underwriting bank deposits, whether through credit insurance or bailing out individual banks like Continental Illinois, and extracting a *quid pro quo* in the shape of banking supervision. It is this combination which enables central bankers to go around as grave-faced financial overseers concerned with so much more than the mere interest rate decisions that engage their economists.

A free banking perspective has the advantage of ending the artificial distinction between discussions about monetary policy conducted as in church and real world bankers' concerns about where to extend operations and where to contract them.

• What prevents the competitive supply of money today, given that the official restrictions apply only to notes and coin, and that the overwhelming part of the money supply consists of deposits and financial liabilities of various kinds?

These guidelines may be better than the political instincts of governments; but can we be at all confident that they will stabilise either the financial system or the economy? Indeed, central banks seem more and more to follow the

inflation rate will be in two years. Meanwhile, the Bundesbank sticks to targets for a wide measure of money, but is prepared to override them.

These guidelines may be better than the political instincts of governments; but can we be at all confident that they will stabilise either the financial system or the economy? Indeed, central banks seem more and more to follow the

R&D the victim of high dividend policies

From Dr J H Mulvey.

Sir, Lord Hanson objects to Stephen Dorrell's querying City practices and in particular defends the insistence on consistently high dividends in bad times as well as good ("Hanson angered by Dorrell query over 'too high' dividends", June 4/5). But no one who has read the evidence presented to the House of Commons committee on trade and industry inquiry into the competitiveness of UK manufacturing industry can seriously doubt the City's negative influence on the level of industrial

investment in the UK compared to that in our main competitor nations.

The effect on management is either to require internal rates of return two to three times higher than the nominal interest rate or unrealistically short pay-back periods, to avoid risking the value of dividends.

The City view that if UK industry is not investing in R&D it must be because management sees no opportunities must leave research directors gaping, and our foreign competitors laughing.

A survey by KPMG Peat Marwick of nearly 700 com-

panies directors revealed that the most difficult aspect of performing R&D was finding the money. Managing directors of companies listed on the Stock Exchange were almost at one (82 per cent) in saying the City does not understand R&D investment requirements. If nothing worse, there is a manifest breakdown of comprehension at the critical interface between industry and the financial sector. Stephen Dorrell should be thanked for bringing these issues into the open. Here is where the country should be looking to understand the failure to "realise the

potential" of an outstanding tradition of research in science and technology.

Yet last year's white paper on science and technology in the cause of "wealth creation" (which only two out of 14 City analysts interviewed by KPMG knew about) ignores these problems, while introducing a more *dirigiste* approach to management of research that could threaten the vitality and originality of the science base.

Statistics tell nothing about individual poor

From Mr Paul Ashton.

Sir, Following publication of the Institute for Fiscal Studies report on the distribution of incomes, you comment in your editorial ("More unequal than others?", June 3) that "the evidence that the poorest in society are not benefiting from the economic growth enjoyed by the majority is mounting".

However, what the IFS figures show, very clearly, is just how misleading some statistics can be.

It needs to be pointed out that the figures tell us nothing about how individuals fared over any of the time periods studied in the report.

Its data contained no information about how individuals or households, who appeared in the "poor" category in one year progressed in subsequent years. A different group of people appeared in each of the years under investigation.

This rather limits the usefulness of the findings when it comes to policy implications, especially when we note that the level of state benefits for the poorest has increased by 49 per cent in real terms between 1981 and 1991.

Paul Ashton,

forecast wrong by more than 100 per cent? Second, how is this impressive German growth squared with complaints that Germany has the highest social costs, highest wages, and most powerful unions and works councils in the world? Third, should we take much notice of the OECD plan for employment which is largely based on theories of deregulation, lower wages and longer work hours which have only increased poverty and social division when applied in the UK and US in recent years?

Denis MacShane,
House of Commons,

Commission's aim on contracting out is clarification

From Mr David Lea.

Sir, In his article, "Government near victory on contracting-out reform" (May 31), David Goodhart seems to have swallowed a heavy dose of Department of Employment propaganda in arguing that the UK government is "near victory" in securing the exclusion of contracting out from the EU Acquired Rights directive (Tuce). Although the government has been lobbying vigorously in Brussels for an amendment to this effect, the revisions proposed by the Commission are not geared to any such objective.

Indeed, the Commission's purpose in revising the 1977 directive is not to reduce the protections that it provides,

but to clarify its operation. The new definition of a transfer set out in Article 1 does not exclude contracting out. It simply codifies recent decisions of the European Court of Justice in the leading cases of Sophie Redmond, Spikkers, and Schmidt, among others. In each of those cases the ECJ explained that the key test of whether a transfer had taken place was whether an economic entity which had retained its identity had been transferred. Identical words are to be found in the new Article 1 of the 1977 directive.

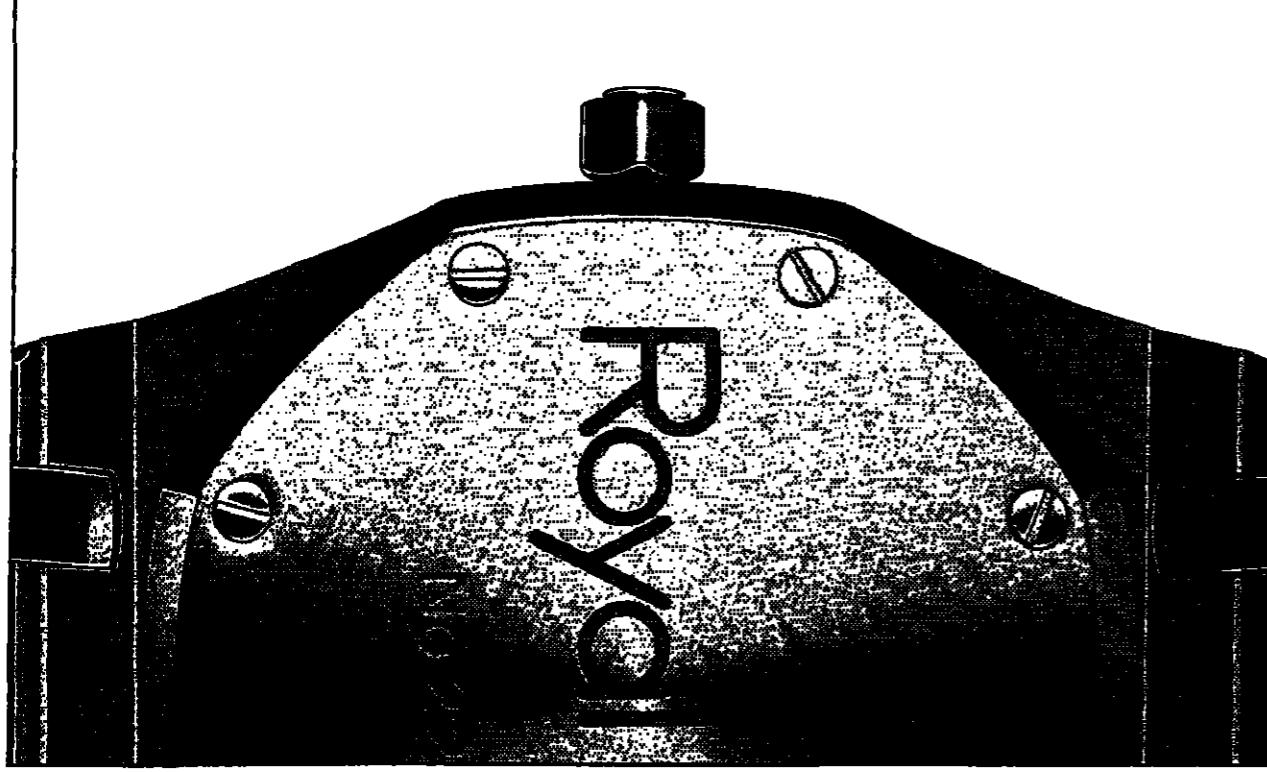

It is also worth noting that both the Trades Union Congress and the Confederation of British Industry have been consulted on the most recent proposal from the Commission through their European organisations, the ETUC and UNICE. We would not have been happy with a text which reduced the existing protections, and in my view there is nothing in the new Article 1 which will cause difficulties for the trade union movement. The revision does have several further stages to go through before it is finally adopted, and it therefore seems premature to suggest that the government is "near victory".

Far from indicating that the EU is moving to accommodate the UK's deregulatory approach" the proposed revision of the directive demonstrates the Commission's determination to defend high standards of social protection against sustained ideological assault. Nor is it the case that the amended directive will assist the government at national level. The controversy surrounding the application of the directive and Tuce 1981 to compulsory competitive tendering and market testing looks set to continue. However, with each new decision of the EU courts and the ECJ it is becoming clearer that most forms of competition in public services are caught by both Tuce and the directive. David Lea,

Thursday June 9 1994

A distant parliament

In theory the elections to the European parliament today and on Sunday should be taken more seriously than previous such ballots. The assembly at Strasbourg is not an impotent talking-shop. It has the power to amend European Union legislation.

The Maastricht treaty enables it to veto some proposals, accept or reject the nominations for the new European Commission due to take office in 1995, and check the union's budget. It should be able to influence a broad range of EU policies, including foreign relations. Some of its elected members may become rapporteurs on important Union directives. As such, they arguably have more power than most backbenchers in national parliaments. Lobbyists and pressure groups have discovered this. Consequently, they devote increasing attention and expenditure to influencing MEPs.

The public, perhaps influenced by the media, remains largely unmoved. Voter participation this weekend is expected to be low, on average below 50 per cent in countries where voting is not obligatory. The turnout in Britain in 1989 was only 36 per cent. It would not be surprising if the figure this time is even lower. Few of those who vote will do so primarily for the ostensible purpose of this weekend's election, namely to choose a representative to send to the European Parliament. Most are likely to use the opportunity to express dissatisfaction with their national governments.

Opportunity

In Britain, the Conservative party's nationalistic rhetoric may be in tune with the sentiments of many of its traditional supporters, but the expectation is that large numbers of them will stay at home anyway. Everyone can see how divided the government is in its approach to the EU. Besides, the opportunity to deliver a protest to an administration that polling suggests is more unpopular than any in post-1945 history seems too tempting to miss. This is why Labour has campaigned on domestic, not EU, issues and the Liberal Democrats have not flaunted their Euroscepticism.

Britain has stuck to first-past-the-post rather than a proportional voting system. In consequence, the left bloc in the Euro-

pean parliament is likely to be disproportionately well represented. It is not clear that this will mean much to the European electorate. In Germany, where the turnout was 62.4 per cent in 1989, both the Christian Democrats and the opposition Social Democrats have campaigned on national issues such as unemployment and crime, although these have been given a European flavour. In France (1989 turnout 47.7 per cent) participation is also expected to be lower this year. A lacklustre campaign is primarily interesting as a guide to the likely outcome of next year's presidential election. Anti-Maastricht parties may, however, do relatively well in both countries. A small but disturbing minority may support parties of the far right, notably in France, Germany and Italy.

Accountability

This anticipated lack of fervour for the European parliament may disappoint its members, but the voters know what they are doing. The Strasbourg assembly does not have the full power to grant or withhold taxation, or pass legislation. Such prerogatives are still held by the national states. The European Commission is an executive of sorts, but is not democratically accountable. It is not dependent on a majority in the parliament for day-to-day decision-making, as are the cabinets of the 12 member governments. Its powers, while not negligible, do not seem to the electors to relate to their bread-and-butter concerns.

Since the fall of communism in 1989 Europe has entered a period of uncertainty. The evolution implicit in the Maastricht treaty is no longer regarded as desirable by all member states. Pivotal new members of the union are understandably hesitant, as the Austrians may show in their referendum on Sunday. The further evolution of the EU will be pursued, if at all, at variable speeds according to national circumstance. The shape of that evolution is no longer predictable. Many citizens of the EU understand this. Their response is naturally to focus on their national interests. Voting for a distant and incomprehensible parliament towards the end of a deeply-recessed recession is therefore bound to be patchy.

Questions for the bankers

The collection of central bankers present in London to celebrate the bicentenary of the Bank of England have never enjoyed greater independent authority over monetary policy. But power brings vexatious responsibility and important questions remain to be solved.

Abandonment of the gold standard was largely explained by a belief that monetary policy should help secure full employment. Unfortunately, the Bretton Woods monetary system proved inadequate to curb the consequent impulse towards over-expansionary monetary policy. Where the system failed, experience succeeded. Events in the 1970s justified the fundamental notion of the monetarist counter-revolution, which was a monetary expansion would, in the long run, lead only to higher inflation.

Enter, then, the modern independent central bank, with its clear mandate to secure price stability. That had been the mission of the Bundesbank, whose establishment reflected both the anti-Keynesian views of German policymakers and the country's catastrophic monetary experience.

Its example has been increasingly imitated throughout the world. With the UK government's explicit inflation target, the inflation report, the publication of minutes of the meetings between the chair of the exchequer and the governor of the Bank of England and the latter's increasingly outspoken comments, even the Old Lady is on a looser chain.

Extraordinary freedom

In the absence of exchange rate or monetary targets, central banks have extraordinary freedom in deciding how to achieve their objectives and even to define the precise criteria by which they are to be judged. Even where banks are not formally independent, as in the UK, the disappearance of exchange controls gives them great leverage over government. Their power to publish is also power to destroy government credibility.

The case for such enhanced central bank autonomy is overwhelming. People make financial decisions that are much longer term than is any parliament. To do so safely and efficiently, they must

A senior aide to Mr Mikhail Gorbachev, former president of the Soviet Union, once made a prophetic warning to the west: "We will do something terrible to you. We will take away your enemy."

Those words will haunt the foreign ministers of Nato's 16 members as they convene today in Istanbul, to be joined tomorrow by their counterparts from the former Warsaw Pact. The stakes are high. If Nato and Russia can bridge their substantial differences over new security arrangements in Europe and beyond, this could pave the way for a breakthrough in the broader relationship between Russia and the west. It could be sealed perhaps with a triumphant appearance by Russia's President Boris Yeltsin at the Group of Seven summit in Majorca next month. Ideally, Russia would like the group to be rechristened the Group of Eight, but the best it can hope for is participation in the group's political - not economic - discussions.

In the face of Russia's aspirations, alliance members will be trying to balance their attempts at accommodating Mr Yeltsin with the need to reassure Moscow's former "satellites", the Poles, Czechs and Hungarians, that Russia would not have a veto over policy.

These would be hard tasks for the alliance even if members were clear about their common purpose. But as the Russians are keenly aware, Nato now lacks the consolidating influence of a good, old-fashioned enemy. Bereft of a communist foe, the alliance has been grooming itself to act as an all-purpose multinational taskforce, ready to move on the instructions of other international bodies, such as the United Nations or the 53-nation Conference on Security and Co-operation in Europe. Yet the experience of Bosnia - where Nato polices the sea and air, while the UN operates on the ground - has shown how acutely uncomfortable the alliance feels about acting as servant rather than master.

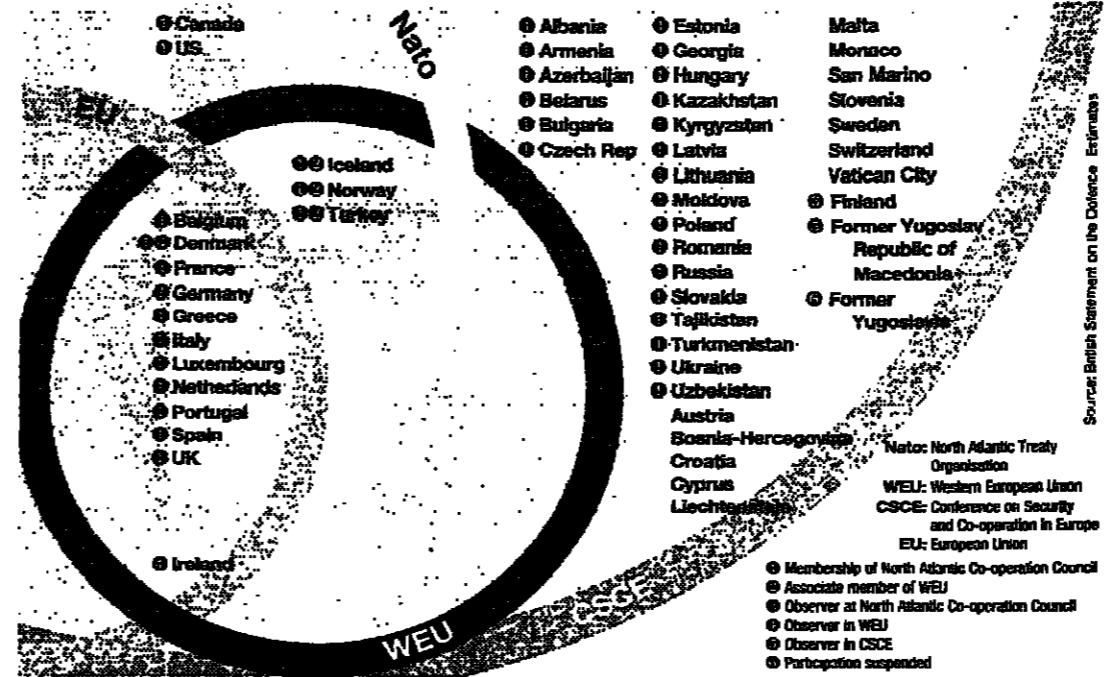

Such uncertainty is haunting Nato at a time when Russia's leadership has presented it with a foreign policy stance both ambitious and shrewdly judged. While some of Russia's ideas sound far-fetched to western ears, Nato defence ministers were nevertheless dazed by the skill of the diplomatic assault mounted in Brussels two weeks ago by General Pavel Grachev.

They had a rough idea of what he was going to say. First, he would signal adherence to the Partnership for Peace, a military co-operation programme designed by Nato that involves joint exercises and the possibility (for some countries, at least) of eventual full membership. He would also demand a special rela-

Nato's relationship with Russia is proving unexpectedly difficult for the west to define, says Bruce Clark

Old enemies make tricky friends

Interlinking circles of security

tionship between Nato and Russia. The ministers had their answer ready: no to a formal treaty separate from PPP; yes to a political statement that would stroke the Muscovite ego by acknowledging Russia's importance, and yes to a dialogue at Nato's discretion.

Gen Grachev lightened a tense atmosphere by telling the waiting ministers that, of course, Russia would join PPP. But the next day, he put forward a list of proposals so tough and far-reaching that few listeners immediately understood them. These included:

- the creation of a Eurasian security order whose apex would be formed not by Nato, but by the CSCE;
- the subordination to the CSCE of all other security organisations: Nato, the Western European Union and the Commonwealth of Independent States (CIS), which comprises 12 ex-Soviet republics;
- if the CSCE provided political and diplomatic leadership, then its "military arm" might be provided by the North Atlantic Co-operation

Council, which consists of Nato, the former Warsaw Pact and the former Soviet republics;

• an "effective mechanism of consultation" between Russia and Nato "on the whole range of European and world security issues, which could function both in emergencies and on a regular basis" - in other words, whenever Russia wanted.

To cap it all, Gen Grachev produced eight pages of "parameters" which would govern Russia's participation in PPP and which, on inspection, look like the preconditions which Nato had vowed never to consider.

While consideration of Russia's parameters can itself be viewed as a concession by Nato, the alliance does not have the slightest intention of submitting itself to the CSCE or to an effective Russian veto over its actions. In any case, the CSCE has neither the financial nor the administrative resources to become the policeman of Eurasia.

When the Russians arrive tomorrow, however, it should become clearer to what extent compromise

hinges on the unrealistic institutional changes outlined by Gen Grachev. Like the general's verbal pronouncements, the points are an artful "mixture of the constructive, the negotiable and the outrageous", according to a Nato official. There are imaginative ideas about military co-operation; requests for a dialogue on nuclear safety and non-proliferation; and fresh demands for Nato to become the junior branch of the CSCE.

But discernible through the high-flown Russian rhetoric is a more realistic agenda, reflecting the "bottom-line" aspirations of both sides. Moscow wants freedom of action in the steadily reintegrating CIS; Nato wants the same freedom plus legal and diplomatic imprint in as wide an area as possible.

Neither side is happy to give the other carte blanche, and each would ideally like to retain some say over the behaviour of the other. But the two sides' aspirations are not so contradictory as to rule out the possibility of compromise; and if such a compromise on freedom of action is

to be struck, then some body with roughly the same membership as the CSCE would be needed to regulate it.

The initial Nato reaction to Russian proposals for a triad based on the CSCE (or something like it), Nato and the CIS will almost certainly be a chorus of denunciation. But as Russian strategists are aware, each member of the chorus will be singing a somewhat different tune.

Some of the strongest opposition to any real upgrading of the CSCE will come from the US, which is already unhappy about the loss of sovereignty it suffers when working through the United Nations and has no stomach for involvement with another unwieldy institution.

But Germany has shown greater sympathy for a limited increase in the CSCE's remit. Days before Gen Grachev arrived in Brussels, the German government floated proposals - designed in part to satisfy Russian concerns - that would increase the CSCE's authority to intervene in conflicts, if necessary without the consent of the warring parties.

By putting forward the CIS as one of the pillars of a new security arrangement, Moscow is effectively asking for western recognition of its influence in the three republics of trans-Caucasia and the five of Central Asia. If, in return for such acknowledgement, Russia is prepared to guarantee restraint in its behaviour on its western borders, it would be a tempting deal for Germany, which is acutely worried about the security of its central European neighbours.

For most other Nato countries, hesitation over endorsing Russian tactics in the CIS - which have included intervention in the supposedly "internal" conflicts of its neighbours - is tempered by the thought that almost anything is preferable to chaos.

However, one alliance member is definitely not prepared to cede all influence over the southern republics of the CIS to Russia - and that is Turkey. There is undisguised dismay among the hosts today at the prospect of tolerating Russian hegemony over parts of the world which until recently were viewed as ripe for incorporation into the cultural and economic orbit of Turkey.

Russian tactics in the republics to its south have included frequent recourse to the imperialist principle of divide-and-rule - supporting one side and then the other, and occasionally both simultaneously - in the internecine conflicts of places like Georgia and Tajikistan. Unless the Nato ministers are careful, they could find the "divide-and-rule" principle being turned on them.

Channel shoppers' storm in pint pot

UK brewers are at odds with the government. The issue is the difference between UK and French excise levels - and the brewers are crying foul.

They complain that the disparity between the two countries' duty levels is leading to a flood of beer imports from France into the UK which is damaging the brewing industry. They want to see UK duty halved. But have they and the Brewers and Licensed Retailers' Association got it right?

New evidence continues to emerge to cast doubt on the extent of their claims. While UK consumers are clearly exploiting lower French beer prices, lack of official data has created controversy about the impact of the single market.

No-one disputes that duty on beer in the UK is among the highest in Europe - nearly 30 pence, compared with 4p in France, while the recommended EU level is 8p. In 1992, the UK industry and the Brewers' Society (now the BLRA), predicted that the new "personal

import allowance" of 110 litres of beer - introduced in January 1993 to comply with EU requirements - would encourage cross-Channel shoppers to enjoy the lower beer prices on the Continent.

The BLRA carried out its own survey during 1993 and in its findings, published in February, claimed that personal imports in 1993 were around 1.9m hectolitres of beer, or 330m pints. This would equal around 15 per cent of the UK take-home trade.

The survey was swiftly endorsed by leading brewers. Although undoubtedly extensive and based on observation at ports as well as consumer research, important primary evidence suggests personal imports were probably no more than half this level. The difference matters, because if the industry is to convince government it must approach the problem with defensible data.

The BLRA has produced figures for receipts from beer duty in 1993 showing there was actually an increase, from £2.39bn in 1992 to £2.41bn. UK consumption of beer per head is 100 litres a year, well above the EU average of 82 litres

but below the most recent "high" of 120 litres. And the underlying trend is long-term decline, due to factors such as the growth of alternative drinks and demographic shifts. The view that an increase in consumption would compensate for a duty reduction is unrealistic. Denmark reduced beer duty by more than 30 per cent from 1991-1993, yet the market has remained flat.

The decline of the French market in 1993 clearly does not credibly accommodate the 1.9m hectolitres of UK personal imports. Total beer sales in 1993 in continental EU and EEC countries were down around 3 per cent. It is unlikely that domestic demand in France was down by more than 5 per cent. Nor is there evidence that on-premises beer sales fell by more than 4 per cent.

In France, a sharp rise in sales, to reflect a supposedly dramatic increase in personal imports to the UK, would have been expected. Yet, according to data from the Association des Brasseurs de France (the French equivalent of the BLRA), beer consumption actually fell from 23m hectolitres to 22.6m in 1993. These figures include all beer sold in France and therefore cover beer purchased by cross-Channel shoppers.

The decline of the French market in 1993 clearly does not credibly accommodate the 1.9m hectolitres of UK personal imports. Total beer sales in 1993 in continental EU and EEC countries were down around 3 per cent. It is unlikely that domestic demand in France was down by more than 5 per cent. This suggests personal imports from France into the UK in 1993 were actually around 300,000 hectolitres, perhaps 1m at most, depending on the 1993 level. Senior sources within the French brewing industry endorse both this view of their domestic and the level of cross-channel shopping.

Cross-channel passenger loadings lend further circumstantial evidence. According to the ferry operators there were 3m vehicle journeys in 1993, or 1.5m return trips. Even the lower estimate for personal imports still equals around 60 litres per return trip, while the BLRA survey would imply that every vehicle took a full allowance. Total passenger journeys were much higher, at 8.5m return trips, but this would include coach loads of school children, and foot passengers unable to transport more than a fraction of their allowance - 110 litres is, after all, a lot of beer.

The current situation is, of course, a damaging short-term problem. The new allowances are open to abuse, but Customs and Excise are alert to the problem. If the UK brewing industry, supported by defensible data, were to call for a more measured approach to reducing duty to recommended EU levels, it is more likely to be heeded.

Citizen Spies joins up

At last the UK Citizen's Charter panel recruits someone with expertise at the sharp end. John Spiers has joined in order to focus the panel's mind on standards in the National Health Service.

Spiers also happens to be chairman of the Brighton Health Care Trust, which achieved notoriety in April for its novel approach to reducing hospital waiting lists - refusing physiotherapy to chronically sick patients aged over 65. A copy of a letter outlining the policy found its way into the hands of the BBC.

Finally, there is the issue of banking supervision. Again the innovator, the Reserve Bank of New Zealand, has decided to hand this job over to the markets, by insisting that all information be made public. The advantages of such a shift, or, alternatively, of separating central banking from supervision seem evident. Only thus would it be difficult for depositors, seeking compensation, to argue that central bankers are to blame for bank failures.

Answering these questions will not be easy. Internationally, central bankers will have to manage an ever higher degree of co-operation, given the increasing integration of financial markets. Domestically, they will be blamed when things go wrong and will be tempted to hide themselves behind a veil of secrecy. But they can achieve what they want only if they say what they are doing and why. Theirs is a game of credibility and confidence. It must, correspondingly, be played with consistency and clarity.

A series of inexplicable mishaps culminated in an exchange with a surly porter who was not wearing a name badge. When Spiers pointed out that name badges were obligatory under

the Patient's Charter, the porter told him to "f*** off". Which apparently is not in the said lexicon.

Spin tried

■ Absurd but true: Dutch newspapers are now carrying advertisements from Unilever proclaiming that Lever Nederland is "100 per cent behind" its newest product, Omo Power, a brand of soaps.

Inspired by the dirty laundry being publicly washed by its arch-rival Procter & Gamble, Unilever is thus now in the ridiculous position of paying good money in order to tell consumers that it likes its own product.

Starry-eyed

■ How nice to see market forces finally at work in that previously tightly state-controlled sector, the former Soviet space industry.

Colonel Talgat Musabayev, a would-be cosmonaut, is being squabbled over by Russia and Kazakhstan, both wanting him as their interplanetary representative. Russia says he either flies for Russia or Kazakhstan will be charged \$100 a week while he is in space, the going rate for "foreigners" aboard Russian spacecraft.

Musabayev was a Soviet citizen until 1991. And although an ethnic

S Korea could join in 1996, say ministers

OECD summit agrees new membership talks

By Peter Norman, Economics Editor, in Paris

Ministers from the 25 nations of the Organisation for Economic Co-operation and Development yesterday moved towards expanding the Paris-based body by approving negotiations on OECD membership with South Korea and four east European countries.

A statement issued after the OECD's two-day annual ministerial meeting held out the prospect of Korea's becoming a member by the end of 1996 and called for "an early start" for negotiations on membership with the Czech Republic, Hungary, Poland and Slovakia.

As a further indication of the OECD's increasingly outward-looking nature in the post-cold war world, the organisation and the Russian government agreed to step up the flow of economic assistance from the OECD to Russia.

Under the terms of a joint dec-

laration on co-operation, the OECD will develop a policy dialogue with Russia, assisting the design and implementation of economic reforms aimed at helping Russia to build a market-based economy.

This year's ministerial meeting was notable for the participation of Mexico, which joined the organisation a few weeks ago as its first new member for more than two decades. In their statement after the meeting, ministers said that marked "the beginning of a new phase in the OECD's development".

The four former communist east European countries have applied formally to join the organisation.

South Korea, which already participates in many of the OECD's committees and activities, intends to apply for membership this year, with a view to joining in 1996. The OECD will examine the terms of Korea's membership as soon as Seoul is ready to do so.

Berlusconi announces laws to boost jobs market

By Robert Graham in Rome

Italy's rightwing Berlusconi government last night announced its first major policy initiative, introducing legislation to boost employment through tax incentives and by reducing rigidities in the labour market.

Yesterday, Mr Jean-Claude Paye, OECD secretary-general, suggested that Russia might one day become an OECD member.

The four former communist east European countries have applied formally to join the organisation.

South Korea, which already participates in many of the OECD's committees and activities, intends to apply for membership this year, with a view to joining in 1996. The OECD will examine the terms of Korea's membership as soon as Seoul is ready to do so.

had a disappointing year thanks to a catalogue of difficulties such as decking by Italian pharmacies. It is unlikely to meet its target of a 15 per cent margin for a year or two, but there is a chance its new polyurethane condom could unlock both higher margins and increasing market share. In that case LIG should easily manage earnings of around 8p by 1996-97 and its shares look good value at yesterday's closing ex-rights price of 80p.

Equally, if the current management fails short of its margin target, the strength of LIG's Durex brand and its surgical gloves business may tempt someone else to have a go. The photo-processing business was a trap for any unwary predator. Now it is gone, LIG is more vulnerable. Based on the current market valuation and including debt, LIG would still be worth only around 12 times sales after the restructuring. That looks affordable even to a predator willing to pay a substantial premium for control.

Lloyds/C&G

Yesterday's High Court judgment puts a formidable obstacle in the way of Lloyds Bank's bid for Cheltenham & Gloucester. Though ordinary depositors can receive bonus payments regardless of their length of membership, share account holders of less than two years' standing cannot.

Without their vote the requisite majority would almost certainly be unattainable. Since the two parties remain confident of their legal ground, the obvious route is to appeal. It is difficult to conceive of alternative inducements, especially since the judgement made no distinction between cash and paper.

The new uncertainty threatens the 5 per cent out-performance of Lloyds' shares against the sector since the deal was announced. After its abortive bid for Midland, Lloyds cannot let C&G slip through its fingers without being thrown right back into a strategic impasse. The tragedy for the bank is that the judgement appears to rest on a quirk in the wording of the law. More generally it is a forceful reminder that the playing field is uneven. These problems do not arise in cases where building societies are transforming themselves into banks. Yet that creates just as much risk of deposits switching from society to society in search of inducements. There is ever more urgent need for full public debate before the law is re drafted.

Northern Foods

In the long run the migration of shoppers to large supermarkets should work in Northern Foods' favour. Its position as a supplier of own-label foods to the likes of Marks and Spencer and Sainsbury is a strength. Yet problems arise when this migration becomes a stampede. Last year's price war among supermarket giants drew customers away from local stores in droves. Doorstep milk deliveries fall by 12 per cent. Since these outlets account for a large slice of Northern's business, profits across the group barely grew.

For all its efforts to rationalise distribution to smaller stores and franchise milk rounds, this year will be

London International

Mr Nick Hodges of London International is almost certainly right to claim that the group had to dispose of its photo-processing business if it was not to end up disposing of itself. But the restructuring announced yesterday is not necessarily the end of the story. Even after the rights issue, gearing will be nearly 80 per cent and LIG has little chance of trading its way out of debt. It will have to sell some more peripheral businesses, but to avoid earnings dilution it will have to find buyers willing to pay reasonably full prices.

LIG's other task is to raise the return on its condom business which

This announcement appears as a matter of record only.

IN BRIEF

Daimler-Benz to raise DM3bn

Shareholders in Daimler-Benz, the German car-to-aerospace group, will be offered shares in the rights issue at DM640 a share, a discount of 20 per cent to last night's closing price of DM804.50. The issue will raise just under DM3bn (\$1.6bn) for Daimler-Benz, making it the biggest rights issue by a German company. Page 18

Investors may block UAL plan

By Richard Tomkins in New York

nearly 10 per cent of United's shares.

A defeat of the employee ownership plan would be devastating for United. The airline's strategy for fighting back against competition from low-cost carriers such as Southwest Airlines depends on the labour concessions it will produce.

If the plan collapses, United is likely to axe hundreds of unprofitable short-haul domestic routes and start contracting out services such as catering and maintenance. The heavy job losses that

would result could provoke a head-on confrontation with the airline's powerful labour unions.

Under the plan drawn up last year, employees were to swap \$4.9bn worth of labour concessions over the next 12 years for between 53 and 63 per cent of United's shares, depending on how the share price performed.

United said the plan was the best hope for the airline's future, but some shareholders were concerned that if employees gained control of the company, they would put their own interests

ahead of other shareholders.

That concern grew when United gave in to pressure from the pilots' union last month and lifted the employees' initial stake to 55 per cent to compensate them for a decline in the share price. Vanguard/Windsor Funds said yesterday the move was "the last straw".

Other big shareholders in the company - Alliance Capital Management, Fidelity Investments and Sanford C. Bernstein - declined to say which way they would vote. Alliance, which holds

a 12 per cent stake, has previously backed the plan, but Vanguard/Windsor's move could encourage others to revolt.

A similar move by shareholders in Knott, the US discount store group, resulted in defeat for management when it put a reorganisation to the vote last week.

United said yesterday it firmly believed the transaction was in shareholders' best interests. The plan, awaiting approval by the Securities and Exchange Commission, is expected to go to the vote this month or early in July.

FFr13bn restructuring agreed

Euro Disney prices rights issue at FFr10

By Alice Rawsthorn in Paris

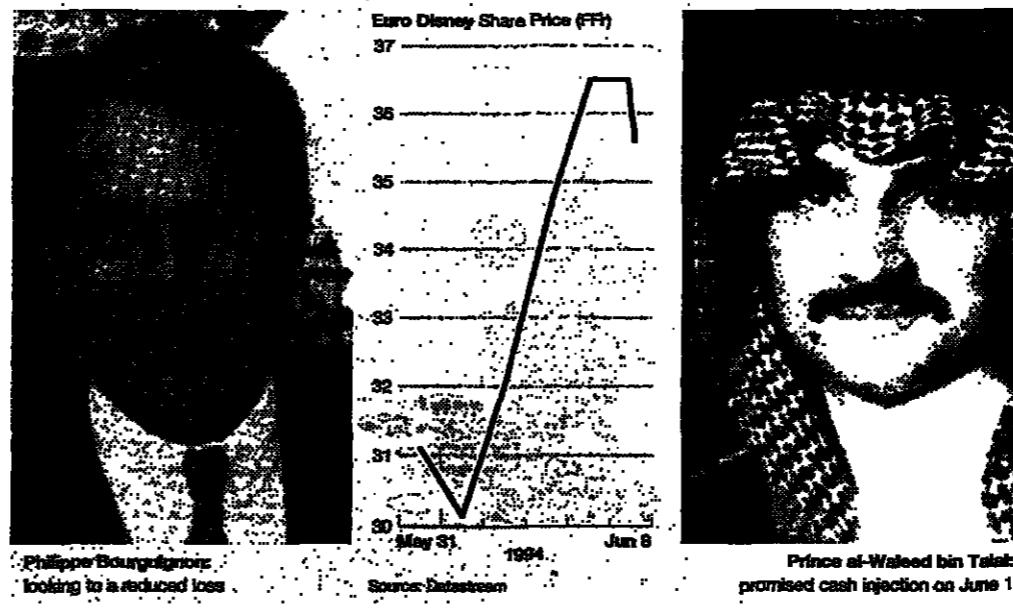

Euro Disney, the leisure group, has secured shareholders' agreement for a FFr13bn (\$2.3bn) emergency financial restructuring package and announced details of FFr10bn rights issue offering seven new shares at FFr10 each for every two existing shares.

The company's share price fell FFr3.50 to FFr33 immediately after the announcement, which was accompanied by news of a decline in attendance and expenditure at the EuroDisneyland theme park in the first half of the year. The shares recovered to close 90 cents down at FFr36.60.

The rights issue, which marked the final stage of Euro Disney's intricate rescue negotiations, was priced at the upper end of expectations. Observers had anticipated a price of between FFr5

Falls in attendances and customer spending

The rescued and one of the rescuers

tions had been difficult so far this year.

Mr Philippe Bourguignon, chairman, said the group anticipated a reduced loss for the second half. However last year's FFr1.06bn net loss was inflated by restructuring costs. Attendance at EuroDisneyland fell 6 per cent

to 3.3m in the first half of this financial year and expenditure per guest was 7 per cent lower at FFr22.8.

The declines reflected the pressures of the European recession and the French franc's strength against the pound, lire and peseta. These problems have persisted into the second half.

Euro Disney does not expect to move back into profit at least until 1995-96. This prompted the Commission des Opérations de Bourse, the French stock market watchdog, to include a routine warning in the rights issue prospectus.

INTERNATIONAL COMPANIES AND FINANCE

LIN Broadcasting to spin off TV station business

By Martin Dickson
in New York

LIN Broadcasting, the cellular telephone company in which McCaw Cellular Communications owns a 52 per cent stake, is to spin off LIN Television, its TV station business, to shareholders in a tax-free distribution of shares.

The company also announced an agreement to buy WINN-TV, an affiliate of the ABC network in Connecticut, from Cook Inlet Communications for about \$120m in cash and 11.5 per cent of LIN Television common shares.

The two moves, expected to be completed by the end of this year, will create a publicly-

quoted company which owns seven television stations affiliated to the three big US broadcasting networks.

Public shareholders would own 42 per cent of LIN Television and McCaw would hold 46 per cent.

The business had pro forma 1993 revenues of \$160m and broadcasting cashflow of \$80m. Cities served by its stations include Dallas, Texas, Indianapolis, Indiana, and Norfolk, Virginia.

Mr Craig McCaw, chairman of both McCaw Cellular and LIN Broadcasting, said television and cellular were two fundamentally different businesses and should be managed separately.

US funds buy paper mill debt

By Bernard Sanon in Toronto

Several US investment funds have emerged as the biggest creditors of the troubled Gold River newsprint mill in British Columbia, after buying more than half of its C\$230m (US\$166.6m) debt at a deep discount.

The involvement of the US funds – so-called “vulture funds”, because they seek to profit from distressed businesses – has made the future of the mill even more uncertain.

Gold River is one of the most modern paper mills in the world. It has been mothballed since Christmas, when its bankers turned down a proposal by its biggest shareholder, Aenor (formerly Canadian Pacific Forest Products), for short-term funding.

A official at Odyssey Partners of New York, one of the US funds, said the mill was “an excellent piece of equipment” with “a lot of value”. He declined to give details of Odyssey’s intentions, but indicated that some developments were likely within the next few weeks.

Mr David Toole, Aenor’s chief financial officer, said the company had so far had no contact with its new creditors. It is drawing up proposals aimed at restarting the mill. These include securing cheaper and more reliable wood supplies.

Aenor wrote off its entire C\$147m investment in Gold River last year. Its eight partners include publishers in the US, UK, Japan and Singapore. The bank lenders are understood to have received between

19 and 30 cents per dollar of face value for their loans. A leading member of the bank group said: “When the ‘vulture capitalists’ get involved and you lose the majority of the bank syndicate, it gets to be too much trouble.”

Banks which have sold their loans include Toronto-Dominion, Union Bank of Switzerland, and Royal Bank of Canada. TD has been replaced as leader of the creditor group by Coopers & Lybrand, the international accountants.

The removal of Gold River’s annual output of 230,000 tonnes from the market helped other North American newsprint producers impose a 6 per cent to 7 per cent price rise earlier this year. The producers hope to push through a second, similar increase in August.

NTT, Silicon in multimedia link

By Louise Kehoe

Nippon Telegraph and Telephone is planning a trial of interactive multimedia services in Japan using technology supplied by Silicon Graphics, the US computer manufacturer.

The planned system will link consumers, businesses and government ministries to new

kinds of information services and computing power, the Japanese telecommunications group said.

The interactive multimedia services system, in combination with the fibre-optic digital network being introduced by NTT, will serve the expanding needs of a wide range of users,” said Mr Masashi Kojima, president of NTT.

The companies said they had reached a preliminary agreement for Silicon to supply computers and software for the project, which will be the first trial of interactive multimedia services in Asia.

Several trials are already under way, or planned, in the US. Silicon is providing similar technology for a Time Warner interactive TV trial this year.

Brazil eases restriction on mutual equity funds

Brazil’s Securities and Exchange Commission (CVM) has moved closer to the modernisation of its stock exchanges by allowing non-financial institutions to form and manage mutual equity funds, Reuter reports from São Paulo.

CVM president Mr Thomas Tosta de Sa said: “We want to make the rules flexible for the stock market in Brazil.” He said the measure would be come into effect over the next few days.

The CVM’s board of directors will approve the measure today. It will be effective as soon as the board’s decision is published in the government’s official gazette,” Mr Tosta de Sa said.

He said consultant firms, as well as individuals, would be allowed to form and manage their own equity funds.

According to current stock market rules, only financial institutions are allowed to open stock funds in Brazil. CVM officials said, however, that stock custody and distribution rules would remain unchanged.

“An individual will be allowed to open an equity fund, but he still needs a financial institution to provide the custody and distribution of the shares for him,” Mr Tosta de Sa said.

Orkla suffers fall in spite of improved sales

Orkla, the diversified Norwegian group, reports a dip in pre-tax profits for the first four months, to Nkr299m (\$54.4m) from Nkr303m in the same period last year, writes Karen Fossli in Oslo. The fall came in spite of a Nkr902m rise in sales, to Nkr8.4bn.

The beverage division was the weakest performer, with an operating loss of Nkr23m against a profit of Nkr10m.

A fall in group operating profit, from to Nkr289m from Nkr321m, was blamed on expansion and restructuring.

Broking tough man rejoins the fray

The new Alexander & Alexander chief speaks to Richard Waters

Mr Frank Zarb has been here before – a broking firm with a long and venerable history, but losing ground to competitors and with little control over its costs. And it is part of an industry without a tradition of strong management, where poorly performing firms are quicker to blame market conditions than their own shortcomings.

Last year, it revealed its consulting business had been overstating its income by failing to allow sufficiently for fees that would not be recovered.

The year before, it took a \$45m after-tax charge for liabilities taken on when it acquired the Sphere Drake insurance company during the 1990s.

Mr Zarb – once head of the Smith Barney stockbroking firm – emerged late on Tuesday as chairman, chief executive and president of Alexander & Alexander, the US-based insurance broker.

For the 53-year-old native of Brooklyn, it will be a challenging end to a long and varied career. Once a senior partner at Lazard Frères in New York, and a former energy adviser to President Gerald Ford, much of Mr Zarb’s career has been spent in the stockbroking industry, where he has gained a reputation as a tough operating manager.

Hired in 1988 by Mr Sanford Weill, head of Primerica (now renamed Travelers), Mr Zarb was behind a turnaround at Smith Barney – though much of the recovery was due to the improvement in the stockbroking market after its post-crash lull in the late 1980s.

Investors will be hoping he can work the same magic on Alexander & Alexander. The share price of the insurance broker, the world’s second big-

gest, has languished in recent years, as the company has been battered by a succession of one-off charges, high costs and a weak property/casualty insurance market.

In 1993, it was stockbroking. This week, it is insurance broking.

Mr Zarb – once head of the Smith Barney stockbroking firm – emerged late on Tuesday as chairman, chief executive and president of Alexander & Alexander, the US-based insurance broker.

For the 53-year-old native of Brooklyn, it will be a challenging end to a long and varied career. Once a senior partner at Lazard Frères in New York, and a former energy adviser to President Gerald Ford, much of Mr Zarb’s career has been spent in the stockbroking industry, where he has gained a reputation as a tough operating manager.

“They grew too fast,” says one person close to the company. “They developed a certain amount of feudalism: different parts worked in different directions.” One result was a lack of control over costs. The company was also rocked during the 1980s by fraud-related losses at Alexander Howden, the Lloyd’s broker.

By January, the depth of the problems became clear. Mr Thosely Irvin was replaced as chairman. At the same time, J.P. Morgan and CS First Boston were hired to find a way of buttressing the company’s finances.

It slipped into loss in the first quarter, losing \$15m. By the end of March it was in breach of the terms of a banking facility, further limiting its financial flexibility.

Options considered in recent months have included an outright sale of the company, the disposal of some of its businesses, and raising additional equity capital.

“Frankly, our goal is to preserve the independence of this fine franchise,” said Mr Robert Boni, who has served as interim chairman since January. “We strongly believe there are great opportunities here to restore it to its rightful place in the industry.”

And for A&A brokers who fear that they will be harangued endlessly by Mr Zarb for not matching up to Smith Barney, there is hope – the new chairman promises he will refrain from making too many comparisons with the stockbroker he once headed.

With the breathing space granted by the AIG investment, what can Mr Zarb do to turn A&A around?

It seems a fair bet that cutting operating costs will be high on his list. “I don’t want to be pious,” he says, “but in financial services businesses, you have to run your business so you do well in bad markets. And if you do that, you’re going to do terrific in a good market. That is exactly how we ran Smith Barney.”

Mr Boni goes further. “Too much of the brokerage industry excused itself in the past for its deteriorating margins,” he says. Now, the pressure is on to find better and more efficient ways of conducting business.

New technology, better training, re-engineering of processes – all those things will lead to much improved productivity in the industry, he says.

And for A&A brokers who fear that they will be harangued endlessly by Mr Zarb for not matching up to Smith Barney, there is hope – the new chairman promises he will refrain from making too many comparisons with the stockbroker he once headed.

IBM seeks lifting of decree

By Louise Kehoe
in San Francisco

IBM wants to persuade the US courts to lift restrictions on its computer services business, imposed in a 1956 anti-trust consent decree. The decree forces IBM to separate its US “outsourcing” business, which manages computer centres on behalf of customers, from other operations.

IBM lawyers this week discussed the decree with a New York Federal judge, but have not filed any motions with the

court. The decree arose from a 1952 government complaint alleging IBM had monopolised the market for tabulating machines, the precursor to the electronic computer.

The terms of the decree include orders that IBM must operate its “service bureau” business as a separate wholly-owned subsidiary, which must pay for IBM computer equipment and software on the same terms as its competitors in the service business.

The decree also restricts IBM in its sales of used computer equipment. It may only acquire used computers when they are traded in or exchanged for credit on new equipment. It must then go through a 60-day listing and remarketing procedure before it can sell the equipment.

“We think the decree operates to the disadvantage of customers by artificially raising our costs and preventing us from passing on to our customers the benefits of our integrated operations in marketing, services, manufacturing and development,” IBM said.

Surge at network equipment group

Newbridge Networks, the Canadian supplier of high-speed data networking equipment, reports fourth-quarter net profits of C\$47.3m (US\$34.3m), or 59 cents a share, up 85 per cent from C\$25.5m or 32 cents a year earlier. Revenues were C\$164m, up 63 per cent, writes Robert Gibbons in Montreal.

For the year ended April, net profit was C\$157.3m, or C\$1.98 a share, against C\$60m, or 81 cents, a year earlier. Annual sales were 80 per cent higher at C\$552m.

IMI THE BANK FOR INVESTMENT IN ITALY

Combines operational expertise with financial strength, to provide both corporate and private clients with a full range of investment services.

Volatile markets hit National Mutual

By Nikki Tait in Sydney

National Mutual, the second largest life office in Australia, yesterday announced that its profits after tax in the six months to end-March fell to A\$20.6m (US\$15.1m), compared with A\$112.1m a year earlier. The company said that performance in the second quarter had suffered from volatility in world equity and currency markets and the upward trend

in long-term interest rates.

Unrealised investment losses

in the period total A\$50.1m.

The company is currently a mutual but has mooted the possibility of changing itself into a shareholder-owned company at some stage.

• G.E. Crane, the New South

Wales-based metal fabrication and plumbing supplies group, said yesterday that it was buying the Mico Wakefield group of companies in New Zealand

for NZ\$54.25m (US\$32.2m).

The New Zealand company

has 23 branches, employs 400

people and has annual sales of

about NZ\$140m a year.

INTERNATIONAL CAPITAL MARKETS

Treasuries regain stride after inflation assurance

By Frank McGurk in New York and Graham Bowley in London

US Treasury bonds regained their stride yesterday morning after the chairman of the Federal Reserve said that inflation was showing no signs of acceleration.

By midday, the benchmark 30-year government bond was up higher at \$944, with the yield slipping to 7.22 per cent. At the short end, the two-year note was up better at 100%, to yield 5.72 per cent.

After a brief downturn the previous session, bonds resumed their advance across the board. Yesterday, the catalyst was remarks by Alan Greenspan in London. The head of the central bank declined to make any specific forecast on inflation but said "the numbers were clearly restrained".

GOVERNMENT BONDS

ever, traders were distracted by renewed weakness in the dollar.

The US currency suffered a further setback against the yen in the foreign exchange markets after Mr Ron Brown, the commerce secretary, said the US would not rule out trade sanctions against Japan, although Washington had no immediate plans to use them.

He said that the bond future on DTB, the German futures and options exchange, was trading above its counterpart on Liffe. "which is a rare occurrence". He added: "People

were taking up positive positions which earlier they had liquidated."

But analysts said that retail investors had still not fully regained their confidence and that selling was still taking place. The September German bond future on Liffe ended up 0.63 point at 92.33.

Mr Fietmeyer said that the German economy was "at the first stage of recovery" and he expected it to grow further.

"Bonds rose quickly in early trading, testing important technical levels," said Mr Peter Karger, head of futures and options at NatWest Markets in Frankfurt.

US broker in \$33m compensation move

By Frank McGurk in New York

PaineWebber, one of the largest US brokerage houses, is taking the highly unusual step of compensating investors in a government-bond fund for losses suffered in recent weeks.

The firm said the securities, mostly acquired over the last year, contributed to 6 cents of the total decline in the fund's net asset value since late April. It said it would inject enough cash into the fund to make up the mortgage-related losses.

PaineWebber is taking the step as part of an agreement in principle to settle a class action suit filed by some of the fund's investors.

Although the fund was not prohibited from including mortgage-backed securities, the prospectus made clear its managers would eschew such volatile financial instruments.

As part of the settlement, PaineWebber would also make direct payments to investors who redeemed their shares after April 28.

São Paulo blows whistle early for the World Cup

By Angus Foster in São Paulo

About 100 of the exchange's 500 staff will remain on duty during the games to man vital services. Stockbroking firms are expected to follow the exchange's lead and allow workers to stop work early.

Football, Brazil's national passion, often interrupts commerce but it is the first time for 20 years that the exchange has altered its trading routine to accommodate it.

"Since the games start at 5pm, people will have time to finish their duties and still watch the matches," said Mr Flavio Guimaraes, exchange spokesman.

Ontario's \$1bn global offering meets strong demand

By Connor Middelmann

The Province of Ontario's \$1bn of 10-year bonds - its first global offering in the current fiscal year - was launched yesterday and met with strong demand, syndicate officials said.

Offering an indicated yield spread over US Treasuries of 67-70 basis points, the bonds were seen to offer good value and the lead managers reported strong demand from international investors.

"It was very encouraging that we saw not only American demand, but also a good bid from European and Far Eastern institutions," said one syndicate manager. The deal, led by joint bookrunners Goldman Sachs and Salomon Brothers, will be priced today. Dealers expect the yield spread to be at the lower end of the indicated range.

Also in the US dollar sector,

Wal-Mart Stores launched a successful issue of \$250m five-year bonds via Goldman Sachs. The deal met with strong demand from retail investors, traders said.

"It's one of those great retail-driven blow-out deals," said a

syndicate manager at another house. "We would have loved to have led it," he added.

Priced to yield 32 basis points over Treasuries at the fixed re-offer, the spread tightened in after the issue was freed to trade and ended the day at 30 basis points over Treasuries on the bid price.

In the D-Mark sector, DM300m of 7% per cent five-year bonds for the Bank of China got off to a slow start. Lead manager Commerzbank said it was confident the paper

would get placed over time, aided by the fact that a double taxation agreement between Germany and China enables some investors subject to German taxation to increase their after-tax yield by an additional 15 per cent of the nominal coupon.

However, officials at other banks were more sceptical, arguing that the deal's 105-basis-point yield pick-up over bonds at the price to investors was unlikely to attract retail demand.

Undaunted by the recent slow of issuance in the Canadian dollar sector, three more borrowers tapped that market, all in the four-year sector: Commerzbank Overseas Finance issued C\$150m of bonds via IBI International, Electricité de France issued C\$125m of paper via Paribas Capital Markets, and the Belgian savings bank ASBL-CGEBR issued C\$75m of

bonds via Wood Gundy. The Canadian Mortgage and Housing Corporation is about to add to supply in the Canadian dollar sector, after announcing yesterday that it plans to issue a global bond

soon. Dealers said that the deal could emerge as early as today if market conditions remained stable, and were calling for a C\$1bn five-year global offering from the government-guaranteed unit, which sold its first C\$1bn global bond last November.

Meanwhile, the European Investment Bank was said to be taking bids for a \$500m deal which could also be launched today, traders said.

COMPANY NEWS: UK

Enterprise elaborates on logic in Lasmo bid

By Peggy Hollinger

Enterprise Oil yesterday sought to meet criticisms over its £1.3bn bid for rival explorer Lasmo with a letter to the target's shareholders setting out the logic behind both a takeover and the unusually structured all-paper offer.

It comes just two days before Lasmo is expected to announce an independent valuation of its own assets as its final shot in the bid battle. Under takeover rules, Lasmo may release no new information after Friday.

The valuation has been done by DeGolyer & McNaughton, a leading US petroleum consultant. It is likely to show a net asset value per share of substantially more than the offer value of 128p based on last night's 137p close for Lasmo and 351p for Enterprise.

Enterprise's commercial argument, meanwhile, is based on the assumption that the risk and reward profile of

exploration/production companies must be smoothed out to ensure a steady return to shareholders.

By combining the two companies, shareholders would see benefits from complementary assets in the North Sea and abroad; greater recovery from the maturing North Sea through joint geological knowledge; an increased potential to swap assets; accelerated exploitation of assets in south east Asia; and a strong balance sheet.

Enterprise also argues that the enlarged company would have improved chances of profitable exploration through the use of Lasmo's facilities in Liverpool Bay.

Enterprise sought to clear up questions over its complicated all paper offer - which comprises 27 A shares with limited dividend rights and 12 warrants for every 80 Lasmo shares. The offer included tradeable warrants, the group

said, "to reflect the difference in dividends between the A shares and the Enterprise ordinary shares".

Lasmo rejected Enterprise's commercial arguments as flawed. "I think their statement that we have complementary assets means we have different assets," said Mr Darby, chief executive.

Lasmo said Enterprise was also wrong in claiming it could benefit from Lasmo's Liverpool Bay infrastructure. "They would have the same access and pay the same tariffs whether or not they owned Lasmo. How is value added here?" asked Mr Rudolf Agnew, chairman.

Enterprise challenged Enterprise to follow its example in valuing the assets behind the all-paper bid. "We have come up with a value for our paper. The only way they can prove their offer is fair value is if they do the same," an adviser said.

Strong UK sales growth as Electrocomponents rises 40%

By Paul Taylor

Strong UK sales growth helped Electrocomponents, the electronic, electrical and mechanical components distribution group, report a 40 per cent increase in pre-tax profits for the year to March 31.

Profits were £72m, against 25.9m after net losses of 2m on disposals. Earnings per share were 22.5p (19.3p) and a proposed final dividend of 7p makes a total of 9.5p (7.5p). The shares closed 12p higher at 487p.

Sir Keith Bright, who steps down after five years as chairman next month, said the results reflected "the start of the climb out of recession in Australia, Ireland and particularly the UK."

Turnover increased by 2.3 per cent to £395.5m (£387.5m). Excluding the effect of the disposal of the loommaking Misco businesses the previous year, turnover grew by 14 per cent and operating profits increased by 16 per cent to £69.9m (£60.1m).

Sales in RS Components' UK division increased by 12.2 per cent to £279.6p as the group extended its catalogue range and boosted market share.

RS International's sales grew by 35 per cent to

£79.9m despite the difficult trading conditions and showed a profit underlining the progress made by the group's expanded continental European operations. Sales at Pact International fell by 3 per cent to £27m giving a £20.00 loss.

The strong cash generation of the RS business in the UK resulted in a £20.6m increase in net cash to £57.4m over the year.

COMMENT

The results were slightly ahead of expectations and serve to highlight the strong performance of the core distribution business in the UK and the success of the group's focused strategy. The push into overseas markets is continuing with a new joint venture in India and the strengthening of distribution partnerships in Europe, the middle east and east Asia. This overseas expansion, particularly the start-up operations in Europe, should drive earnings forward well into the next decade. Meanwhile the cash balances will be used to support organic growth including a £35m investment over the next two years in a new warehouse in Nuneaton. This year pre-tax profits of about 28m look possible producing earnings of 26p and putting the shares on a deserved multiple of 18.7.

Invesco to launch Japanese investment trust

By Bethan Hutton

Invesco has announced plans for a Japanese investment trust, the third new trust to be launched in the sector this year. The Invesco Japan Discovery Trust will aim for long-term capital growth by concentrating on smaller companies.

for which closes at the end of the month. Invesco already runs two Japanese unit trusts, and will draw on the experience of its existing Toyo-based fund managers for the new trust. Shares will be issued at 100p, with one warrant attached to every five shares. The public offer opens on July 14 and closes on July 29.

At Viglen, PC simply means 'Pleasing Customers'

In today's highly competitive PC market, virtually every manufacturer will promise 'customer satisfaction'.

According to countless surveys though, very few include some of the best-known to keep this promise. And of those that do, one can consistently be found in the top rankings for quality, value and after sales service as well as customer satisfaction - Viglen.

In the recent Computer Weekly/Datapro user satisfaction survey, Viglen swept the board as the best PC manufacturer with the best machines. Users rated Viglen first in nearly all of the hardware and company categories

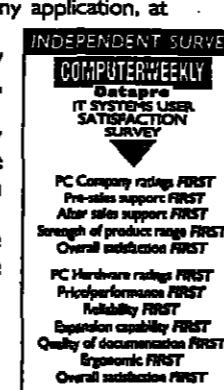

including the key areas of price/performance, reliability and after sales support.

With a range of PCs from entry level and notebook to the latest PCI models, Viglen's products are ideal for almost any application, at prices to suit almost any pocket.

To understand just how satisfied Viglen users are though, simply talk to a few...

You'd find many have already decided that when the time comes, they'd choose Viglen again.

Which only goes to prove that with Viglen, you get more than just a PC...

COMPANY NEWS: UK

Private broadcaster bids for Chiltern

By Paul Taylor

Racal Electronics, the data communications, radio and network services group, yesterday reported an expected sharp decline in full year pre-tax profits, but promised "a very substantial" improvement in performance this year.

The bullish comments about the outlook prompted a 10p rise in the share price to 248p.

Racal also announced the sale of the remainder of the Racal-Redac computer-aided design business to Japan's Zugen for £12m in cash.

Since the closure of Radio Luxembourg CLT has had little official presence in the UK although it owns 80 per cent of Atlantic 252 which transmits from Ireland to more than 65 per cent of the UK population.

Luxembourg-based CLT, which manages 13 radio stations and eight television stations in continental Europe has been trying to get into the UK for some time.

In the year ending September 30 Chiltern, which broadcasts in the northern Home Counties showed losses of £246,000 on a turnover of £5.8m, and yesterday announced a pre-tax profit of £16,000 on a turnover of £2.7m for the six months to the end of March.

CLT is offering 242p in cash, representing a premium of 18.3 per cent over the Chiltern price at the close of business on June 7. Holders of 15.35 per cent have agreed to accept the offer.

The Daily Mail and General Trust which last week bought a package of radio stocks, including an 18.5 per cent stake in Chiltern, was last night reviewing its position.

Apart from its local licences

Chiltern has a 25 per cent

stake in Network News (Radio)

which provides a 24-hour radio news service to both local stations and Virgin Radio. It also won the Severn Estuary licence, one of five new regional commercial stations which opened in September.

For CLT the Chiltern purchase, if it goes ahead, would fill in large stretches of the UK not reached by Atlantic 252.

Shares in Argent, the property investor and developer which came to the market in a placing and intermediaries offer, went to a 4 per cent premium on their first day of trading. The turnover yesterday was 1.57m shares.

The shares closed at 265p yesterday, compared with the offer price of 255p. Schroders sponsored the issue of 13.7m shares, which represents 25 per cent of the enlarged share capital.

The flotation raised a net £27.1m for the company, which it will use to take advantage of additional investment and development opportunities. Warbury Pinches, the US venture capitalists, sold 2.2m shares, reducing its holding to 49.8 per cent of the company's share capital.

At least two-thirds of the capital will be invested in Morocco, with the balance in Tunisia. The focus is on companies quoted on local stock markets with about 25 per cent of the capital earmarked for pre-flotation finance.

The Framlington Maghreb fund to be listed in Dublin, is being marketed throughout Europe and the US and will close at the end of June.

Framlington and Banque Commerciale du Maroc, Morocco's largest private bank, are partners in the venture, and the International Finance Corporation is also expected to take a stake.

At least two-thirds of the

capital will be invested in

Morocco, with the balance in

Tunisia. The focus is on com-

panies quoted on local stock

markets with about 25 per

cent of the capital earmarked

for pre-flotation finance.

The shares rose 33p yester-

day to close at 121.35p.

COMMENT

Once again Racal is promising

jam tomorrow. Delivering on

the promises depends mostly

on revitalising the core data

communications business. Mr

Richardson plans to cut the

product line and identified

£10m of savings. Meanwhile,

the networks business will

benefit from the National Lot-

tery traffic even though the

real gains from being part of

the Camelot consortium will

not come through until 1995-96.

Racal should report pre-tax

profits of about £70m this year,

equivalent to earnings of about

15.8p. After yesterday's rise the

stock is trading on a prospec-

tive p/e of 15.8. Hold.

very substantial improvement.

Sales currently 13% ahead and benefits of cost cuts coming through

Confident Meyer rises to £42m

By Peggy Hollings

Fears that the UK economy might be overheating were dismissed yesterday by Meyer International, the timber and building products group, which said it had perceived only modest and steady growth over the last year.

Mr John Dobby, who took over as chief executive following the departure of Mr Richard Jenson in September, said he had seen "no evidence of inflation getting out of control. We are seeing a steady recovery and the pace of that recovery is not accelerating," he said.

Sales were running 18 per cent ahead of last year, against a 9 per cent increase for the whole of 1993. Yet they were still substantially lower than

the peaks of the 1980s.

Mr Dobby was speaking at the announcement of the results for the year ended March 31 1994, which showed a better-than-expected profits improvement from £14.4m to £21.6m.

Sales were 10 per cent higher at £1.2bn.

Benefits were being seen from two years of cost-cutting, following the ill-fated move into plumbing and heating in the late 1980s.

With costs across the group rising 6 per cent compared with the 10 per cent sales increase, much of the turnover improvement had dropped straight to profits.

The UK builders merchant business, Jenson, improved operating profits by 76 per cent on an 8 per cent increase in

sales to £925m. Sales on a like-for-like basis rose by 9 per cent, including a 4 per cent price increase.

Forest products benefited from a 10 per cent increase in softwood prices over the year. Profits rose by 63 per cent to £19.6m on sales 21 per cent higher at £289.5m.

The Dutch business returned operating profits of £1.36m, 47 per cent ahead of last year.

Meyer's debt as a proportion of shareholders' funds fell from 50 per cent to 19 per cent, largely because of the 270m cash call last year.

The final dividend, cut from 16.5p last year, was increased by 18 per cent to 56p, for a total 12.5 per cent up at 10.8p.

Earnings more than doubled from 11.1p to 24p.

Also announced was the

appointment of Mr Richard Miles, ex-stand of Steedley, as a non-executive director.

● COMMENT

Meyer is doing everything possible to regain the investment community's favour. It stresses caution and is focusing on organic growth. Yet it remains shadowed by its former ambitions. News that Meyer is thinking about returning to plumbing and heating, albeit more cautiously through specialist counters in its branches, left many feeling somewhat stunned. The economic recovery will give great momentum to profits but, in the longer term, this is more of management play. Given its recent history, the jury is still out. Forecasts are for 257m, with a prospective p/e of 14 times.

Pre-tax profits rose from £4.37m to £4.98m in the six months to end March, while turnover increased from £16.3m to £24.5m. Operating profits were 31 per cent ahead at 55.34m.

The company attributed 5.5m of the increase in turnover to the acquisition, and 10 per cent to organic growth.

Mr Ian Scott-Gall, managing director, said Blakely had produced a strong cashflow following a cleverly structured acquisition, which was on course. During the half year the group paid back £1.4m of bank debt incurred in the purchase, reducing gearing from 167 per cent to 81 per cent.

He described the current level of business as encouraging, with a high level of customer confidence in the market.

The Time division, responsible for clocking in equipment, car parks and time control software systems, showed strong growth and good margins.

Operating profit rose from £1.38m to £2.42m on turnover up from £5.78m to £9.24m.

The Communications division, where margins are more competitive, increased turnover from £9.52m to £14.8m, and profits from £2.82m to £2.92m.

Net interest payable rose to £359,000 compared with interest receivable last time of £233,000.

Earnings per share increased to 12.54p from 12.42p. The interim dividend is 3.5p (3.3p).

Acquisition helps Blakely rise 14% to £4.98m

By David Blackwell

The £27.5m acquisition last October of Time and Security from Mercury Communications helped Blakely, the communications systems and time products company, lift interim profits by 14 per cent and turnover by 48 per cent.

Pre-tax profits rose from £4.37m to £4.98m in the six months to end March, while turnover increased from £16.3m to £24.5m. Operating profits were 31 per cent ahead at 55.34m.

Exceptionals leave Anglo United £75m in the red

By Simon Davies

Losses at Anglo United, the heavily indebted owner of the Coalite smokeless fuel business, rose from £20.5m to £74.4m pre-tax in the year to end-March, but the bulk of the deficit arose from the sale of the Charringtons Fuel business in March.

The company showed a marginal improvement in its operating performance, and Mr Harold Cottam, chairman, said Anglo United was exploring the possibility of bidding for parts of the British Coal privatisation.

It is interested in Coal Products, a manufacturer of smokeless fuel, and British Fuels, a distributor of coal, gas and oil, which both complement Anglo United's existing business.

However, these acquisitions would be contingent upon further financial restructuring.

Mr Cottam said: "We believe that Anglo's period of retrenchment is now over." It has almost completed a programme

of asset disposals, following a debt for equity swap with its leading bankers.

Net debt has been reduced by £32.8m to £26.1m, but the company has an additional £24.9m in convertible loan stock and £56m in deep discount loan notes. About £103m of its bank debt is repayable in March 1996 making further restructuring inevitable.

Turnover was £251.5m (£244.7m) and operating profits before exceptional items amounted to £21.9m (£20.3m). The company suffered £1.9m of exceptional losses, primarily related to the closure of one of Coalite's two production plants in Grimsby.

The sale of Charringtons resulted in a book profit £14m, but it took a £7.5m exceptional loss from goodwill previously written off.

Interest costs fell 28 per cent to £21.5m, due to the impact of disposals, and Mr Cottam was confident that operating profit would exceed interest payments in the current year.

LIG's £175m loss part of a 'sorry set of numbers'

By Moodie Urquhart

Even its new finance director, Mr James Tyrell, could only describe London International Group's results for the year to March 31, which accompanied its £115.2m rights issue, as a "sorry" set of numbers.

He said he had prepared the results on a conservative basis, for instance writing off previous deferrals on capitalised and switching the Indian joint venture, in which LIG has a 42 per cent stake, from a subsidiary to an associate.

Group turnover fell 4.7 per cent to £298.6m (£416m) as health and personal products sales fell. Operating profits were £46m lower at £7.5m before exceptional losses. These included £30.6m of operating exceptional losses costs of surplus property, and a £23.7m restructuring charge which includes a £9.4m loss on the sale of the photo-processing division.

Interest charges fell slightly to £14.3m (£216m), thanks to lower interest rates and in spite of a more than £40m rise in debt to £168.4m.

That left the pre-tax loss at £175.1m (profit £27.8m). However, after a tax credit of £200,000 and a minorities credit of £1.2m, the transfer from reserves was £173.7m (retained profit £2.8m). The loss per share was 102.98p (earnings 11.12p).

Mr Tyrell said the sale of ColourCare had been unusually complex. LIG had originally received an attractive offer from an American group but the interests of the small number of large players in the industry had prevented this success.

The sale to the MBO does not cover the 257 million-litre Boots stores, but LIG was close to selling these to two parties, Mr Tyrell said.

In the latest financial year ColourCare lost £13.2m (£13.2m) before exceptional

Standard Life exercises Halifax option

By Norma Cohen, Investments Correspondent

Standard Life, the Edinburgh-based life insurance company, said yesterday that it had exercised its option to buy the joint venture investment company it had formed with Halifax Building Society.

Halifax last year made a decision to end its tied relationship with Standard Life under which it sold Standard Life's retail financial products exclusively.

That agreement formally comes to an end in January 1995, but Standard Life said it was making the announcement of the purchase now "to allay any uncertainty among existing and new investors about the ongoing investment management of their savings."

The joint venture company, which manages the investment of two unit trusts - Income Advantage and Global Advantage - has 68,000 customers and funds of more than £300m under management.

Reggie, which last year reported pre-tax profits of £1.58m on turnover of £16.4m, primarily supplies large high street retailers with its own designed women's coats, jackets and separates.

Helene reported pre-tax profits of £4.51m in 1993 on turnover of £20.1m, 66 per cent of which was generated by women's outerwear.

Some 41.8m ordinary shares are to be issued at 24p on a 1-for-3 basis.

The initial consideration of £4.5m for Reggie will be satisfied by £2.9m in cash and loan notes and the balance by the issue of 6m shares to Reggie's vendors.

The further 5.5m will be payable so long as Reggie's aggregate pre-tax profits for the two financial years to December 31 1995 exceed £4m.

The Helene board said it hoped to raise a total of £14.9m, £6.4m of which would be used to meet the cash element and part of the loan note element of the acquisition and £8.5m as additional working capital.

Mr Peterman said a larger capital base was needed to expand the company at a time when retailers were beginning to do business with key suppliers only.

Apart from the rights issue, the board proposed that an additional £6m would be raised by the subscription of 24.3m ordinary Helene shares (about 12.3 per cent of the enlarged ordinary share capital) by Causeway Smaller Quoted Companies Fund.

The rights issue has been fully underwritten by Samuel Montagu.

DOING BUSINESS IN RUSSIA?

Save time, effort and money at the start
All foreign companies wishing to conduct business in Russia need to register there. In Moscow, registration is handled by the Moscow Registration Chamber. Fortunately, this process can be relatively quick and easy, thanks to Financial IZVESTIA which is now offering the Moscow Registration Chamber's own Guide to Registering Companies in Moscow. Written in English and in collaboration with the international law firm, Salans Hertzfeld & Heilbronn, this invaluable Guide

- Enables you to select the most suitable legal structure for an enterprise.
- Supplies checklists so you avoid common mistakes when registering.
- Provides sample registration forms and letters to obtain the relevant authorisations.
- Lists addresses and contact details of key agencies in Moscow.

Much of this information is simply unavailable elsewhere and will be of real practical everyday use to anyone intending to do business in Russia, as well as legal, financial, accounting and other advisors.

The Guide to Registering Companies in Moscow is available exclusively from Financial IZVESTIA — to order your copy, see below.

COMPANY NEWS: UK

Evans Halshaw acquires Davenport for £33m and makes £29m cash call

By Paul Chesseright, Midlands Correspondent

Evans Halshaw, Solihull-based motor distributor, has made a recommended £33m offer for Davenport Vernon, the motor dealer, and is raising £29m via a 3-for-10 rights issue priced at 42p.

The merger of Davenport's 28 dealerships with the Evans' 58 represents a further consolidation in the motor distribution sector and comes two weeks after BSG International bid £20m for Jessups.

Some 50.5 per cent of the Davenport equity has been committed to Evans which is offering 100 new shares for every 28 Davenport shares or a cash alternative of 15.8p. The share offer values each Davenport share at 72p, which is a premium of 52 per cent over the overnight price.

At yesterday's close Davenport was up 45p at 158p while Evans fell 31p to 48p.

The proceeds of the rights - underwritten by Kleinwort Benson - will fund the cash alternative and, unless there is

unexpected reluctance to accept Evans' offer, also pay for the £7m acquisition of a private motor dealing company, the future of which is subject to negotiations.

Evans has made no secret of its desire for acquisitions and has had a lengthy courtship with Davenport.

"We've had close connections for three years and have had discussions on a number of occasions," said Mr Geoff Dale, Evans chairman.

Davenport had a rights issue last year but a profits warning last March indicated a weakening financial position and this opened the way for the offer.

Yesterday the company announced pre-tax profits of £47.6m for the six months to March 31 on a turnover of £28m.

It is paying an interim dividend of 0.5p.

Evans expects to be able to extract higher performance and wider margins from the Davenport chain of dealerships. Its dealerships in counties on the north-west side of London complement Evans'

geographical strength in the Midlands and south-east England.

Evans yesterday forecast an interim dividend of 5p for 1994. This represents an increase of about 15 per cent over last year and it is intended that it will be 33 per cent of the total.

Kleinwort Benson acted for Evans in the takeover and NatWest Securities for Davenport.

• COMMENT

Evans Halshaw shareholders can thank institutional reluctance to buy motor distributor shares and market fatigue with capital raising for an advantageously priced rights.

The shares anyway have come off their high point for the year just as profits are set to jump sharply. The combined Evans-Halshaw-Davenport-Vernon group should make 62.8m pre-tax this year and that would give earnings on the enlarged capital of about 35p a share.

That would put the new shares on a prospective multiple of just over 12, which should not be a very severe test of loyalty.

Advance to £12.7m for Cape

By Peggy Hollings

Cape, the building products and industrial services group controlled by Charter Consolidated, announced a 7 per cent increase in pre-tax profits to £1.27m for the year to March 31. This was in spite of a 6 per cent drop in sales to £230m.

The profits rise was achieved against the background of a modestly increasing demand for building products in the UK and continental Europe, the group said. Cape was less optimistic for its industrial businesses, where the outlook in the UK was uncertain.

Operating profits in the architectural and building products division rose by 44 per cent to £9.4m on sales £200.000 higher at £71.7m. The return was helped by the elimination of losses in the ceiling business and higher margins for industrial and insulation products.

The industrial services division fell by 9 per cent to £6.1m on sales down 8 per cent to £150.8m. The proposed final dividend is 8p (7.75p) for a total 2 per cent ahead at 11p (10.75p). Earnings were 15.8p (14.9p).

Provisions peg Waddington to £8m

By David Blackwell

A provision of £7.4m to settle a US antitrust investigation held back profits at John Waddington, the packaging, printing and games company.

Under the antitrust investigation into two of its food ser-

vices companies the group has made a plea bargain, agreeing to a fine of US\$4.2m (£2.2m).

The board expects the full provision of £7.4m to cover the time, ensuing civil claims and legal expenses.

The core packaging business raised turnover from £119.8m to £145.8m, and operating profits from £12.4m to £14.4m. Margins were just less than 10 per cent.

The strongest growth in the packaging sector came from the food services division, which sells to US catering companies. Turnover rose from £220.3m (£190.9m).

Earnings per share were 4.3p (3.19p). A final dividend of 4.7p (4.39p) is proposed, bringing the total for the year to

£28m to £45.4m, although profits of £5.4m (£3.7m) included £500,000 of exchange translation gain.

The carton business

improved turnover from £22.3m to £35.7m, reflecting greater volumes from blue chip customers such as Birds Eye, Cadbury, and Colgate.

Mr Gibson said the group would this year invest £5m in a new production line at the Leeds factory, which would expand capacity from the start of next year.

The specialist printing division reported operating profits down from £4.4m to £3.7m on turnover of £26.6m (£24.4m).

Both turnover and profit in the games division were flat at 25.9m and £3.4m respectively. The group is introducing two new ranges of toys - radio controlled cars from Japan and infant and pre-school toys from the US - which it expects will provide incremental business through its existing distribution outlets.

• COMMENT

Take out the exceptional and this looks a reasonable set of results, particularly if you believe the £7.4m provision for the US antitrust investigation is sufficient. The investigation appears to have done no damage to the expanding food services division. The group has also seen strong growth in the UK cartons sector, where its margins of 12.2 per cent are among the best. Pencilled in profits of about £22m would give a multiple of about 12. This is a worthwhile discount to the sector - providing there are no more exceptional charges.

Chemring at £2.85m after exceptional

By Caroline Southey

The pre-tax figure was struck after losses at associated undertakings of £100,000 (£37,000) and net interest charges of £161,000 (£23,000) because of changes in the Ministry of Defence order methods which increased pressure on the company's cashflow. Net borrowings stood at £1.5m at the half year.

The pre-tax figure fell by 2.3 per cent to £2.85m (£2.92m) on increased turnover of £24m (£21.3m).

Operating profits rose by 5.3 per cent from £2.98m to £3.12m after a £17.3m charge this time for 70 redundancies, mainly at Pains-Wessex, the distress sig-

nal maker.

The pre-tax figure was struck after losses at associated undertakings of £100,000 (£37,000) and net interest charges of £161,000 (£23,000) because of changes in the Ministry of Defence order methods which increased pressure on the company's cashflow. Net borrowings stood at £1.5m at the half year.

Mr Philip Billington, chairman, said that overall the company was performing well and had maintained margins.

The interim dividend has been lifted by 8 per cent to 3.24p, compared with 3p from earnings per share which fell from 9.89p to 9.35p basic or to 9.18p (9.49p) fully diluted.

Scots Hydro seeks southern growth

By David Lascelles, Resources Editor

Scottish Hydro-Electric, the power company, is holding discussions about acquiring power stations from National Power and PowerGen.

Mr Roger Young, Hydro chief executive, said his company wanted to "push hard into England" using the strong cash flow from its operations north of the border. But it was too early to say what the outcome of the talks would be.

The two English generators are required, under an agreement with the electricity regulator, to sell plant and reduce their generating capacity.

Hydro-Electric also announced a 12 per cent

increase in pre-tax profits to £164.2m (£16.4m) for the year to March 31 assisted by strong growth in electricity sales.

Turnover advanced by 10 per cent from £717.8m to £792.4m.

Mr Young said that the rise was also helped by last year's expensive redemption of government debt, and fluctuations in output from the hydro-electric installations due to wide variations in rainfall.

A final dividend of 6.8p is proposed, making a total for the year of 12.6p (11.38p), an increase of 11 per cent. Mr Young said the company aimed to stick to its target of 6.8 per cent real annual dividend growth until the end of next year.

Increases after that would depend on the outcome of the

Quarterly changes to the UK Series of the FT-SE Actuaries

The FT-SE Actuaries UK Indices Committee yesterday issued the following statement:

The Committee has approved the following quarterly changes to the UK Series of the FT-SE Actuaries Share Indices, to take effect from Monday June 20 1994: Chelstfield, Alpha Airports Group, Celltech Group.

FT-SE 100. For inclusion: GKN. For exclusion: Tarmac.

FT-SE Mid 250 and FT-SE Actuaries 350. For inclusion: Capital Shopping Centres, Mercury European Privatisation Investment Trust, House of Fraser, Beazer Homes, Babcock International Group.

For exclusion: Scottish Television, Meggit, Bulmer (BP) Holdings, Frogmore Estates.

exceptional nature of the 15 per cent rise in post-tax earnings. Even so, the underlying rate was based on solid growth both in its home market in north Scotland, and in England and Wales where the company has set its sights for long-term growth. Confirmation that discussions are taking place with the English generators underlines Hydro's determination to expand south of the border, but no one expects any quick deals. The longer term prospects depend on Pro Little's distribution review, though only 20 per cent of its profits are affected as against 80 per cent at the regional distribution companies. Hoare Govett has Hydro on a prospective yield of 4.7 per cent, which is a 10 per cent premium to the market as a whole.

At the same time, Chrysalis, where Mr David Putman, the film producer, is now a non-executive director, has been making film development deals with a number of UK directors and producers, including Mr Gary Shiner, director of *Leon the Pig Farmer*.

Mr Michael Pilsworth, the former managing director of SelectTV who now heads the visual entertainment division, says the aim is to develop a range of production companies in the manner of record labels - usually by taking 50 per cent stakes.

Chrysalis has bought into

Companies promoted from the FT-SE Mid 250 to the FT-SE 100 will be replaced in the FT-SE Mid 250 by those companies excluded from the FT-SE 100.

Companies excluded from the FT-SE Mid 250/FT-SE Actuaries 250 will be included in the FT-SE SmallCap Group.

Companies excluded from the FT-SE Mid 250 will be included in the FT-SE SmallCap Group.

Companies excluded from the FT-SE Mid 250/FT-SE Actuaries 250 will be included in the FT-SE SmallCap Group.

The FT-SE Actuaries 350 Industry Baskets will be adjusted to reflect these changes.

Chris Wright: prepared to reduce his stake if the price is right

coming era of pay television.

Chrysalis' new move into feature films involves a similar strategy of backing a roster of British independents, including Mr John Goldstone, the producer of comedy films such as the *Monty Python movies*.

There have also been detailed discussions with Mr Richard Holmes and Mr Stefan Schwartz of Gruber Bros, the makers of *Soft Top*, *Hard Shoulder*, and Mr Jeremy Bolt and Mr Anderson of Impact Pictures, who made the soon-to-be-released *Shopping*.

Chrysalis has agreed to invest £4m over the next three years to fund the development of new British films, but is key to making money in the

losses have been greatly reduced and that the company is now heading towards break-even.

Beside the small but profitable record import-export business, the plan is to have three main divisions. As well as visual entertainment, the company will concentrate on commercial radio and music publishing.

The first wholly owned Chrysalis radio station, Heart FM, the new regional station for the West Midlands, goes on air in September. It will offer "soft adult contemporary music" aimed at the 25 to 44-year-old market. Chrysalis hopes to take the format to London and is applying for one of two new FM frequencies - although the competition will be fierce.

On top of its music publishing activities, Mr Wright, who sold Chrysalis Records to Thorn EMI for £150m (£100m) in two tranches, has launched the Echo label to try to build up his record business again.

Last year Pony Canyon, part of Fujisankei of Japan paid £1.7m for a 25 per cent stake. "It [Chrysalis Records] took 20 years to build last time. I think it could probably take 20 again," says Mr Wright of Echo, which so far has released only 1,000 copies of work by a band called *Zu*.

Although Mr Wright is as committed to Chrysalis as ever, he says he is not determined to hold on to his 51 per cent control. If the price was right, he says, he would be prepared to sell 15 to 16 per cent of the company.

Bulls return to London's copper and coffee markets

By Our Commodities Staff

The copper and coffee markets, pacemakers in the recent commodity bull run, were back in favour again yesterday.

The London Metal Exchange's flagship contract opened just above \$2,300 a tonne for three months delivery, before surging to a 17-month high of \$2,377 as speculative money piled back into the market. It closed a few dollars off the top at \$2,375.60 a tonne, up \$105 since the day.

Although investment fund buyers played a big part in

recent weeks, copper's performance was underlined by growing physical demand, which had been reflected in 23 successive falls in LME warehouse stocks, dealers told the Reuters news agency.

Coffee prices soared again as the market threw off its recent bout of profit-taking. The September futures contract at the London Commodity Exchange rose by \$91 a tonne to \$2,115 a tonne with the New York market staging a big increase at the opening of trading.

Traders were jumpy about reports of cooler weather in

Brazil as a frost could affect the almost-mature beans, although this was not seen as a major threat. In addition a one-day port strike in Santos, a big Brazilian coffee shipment point, gave the market the jitters and helped to push prices higher.

"There is still considerable upside potential in this market. We've just had a respite and I believe we will go on to challenge and go through the recent highs," said Mr Bill O'Neill, soft commodities analyst at Merrill Lynch in New York.

Traders were jumpy about reports of cooler weather in

'Green' alliance comes to aid of Australia's degraded land

By Deborah Hargreaves

Australian farmers are being encouraged to tackle some of the huge environmental problems facing their country's agricultural industry through a series of local initiatives called Landcare.

Mr Andrew Campbell, a former Landcare co-ordinator, told a seminar in London yesterday organised by the Sustainable Agriculture, Food and Environment Alliance, that Landcare had attracted more than a third of Australian farmers with 2,000 groups set up nationwide.

European farming methods in Australia have caused many of the environmental problems as they are unsuited to the continent's fragile soils and unpredictable rainfall. Land degradation such as salinity, erosion and soil structure decline affects over half of the nation's farmland at a cost of more than A\$3.5bn a year, according to Safe.

Landcare groups consist of farmers, environmentalists, teachers and local people, providing a useful social role as well as tackling environmental problems.

MARKET REPORT

Equities turn higher following production data

By Terry Byland,
UK Stock Market Editor

A welcome return of institutional buyers for UK equities yesterday broke the log jam of poor trading volume which had kept share prices subdued in the two preceding sessions. A vigorous response to a strong rise in industrial production in April raised hopes that share prices are poised to "grow in the economy, in company profits and in dividends," to quote one leading market strategist.

The revival of optimism was also buttressed by assurances from Mr John Major, the prime minister, that any control of dividends has been firmly ruled out, thus removing one of the stock market's most significant causes for concern. However, polling for the European par-

liamentary elections takes place in the UK today, bringing the likelihood of a drubbing for Britain's Conservative party.

The FT-SE Index closed 33.4 higher at 3,038.2, having touched 3,043.2 earlier. The advance was underlined by a return, for most of the session, to premiums in the Footsie stock index futures which have been at a discount for several sessions. Strength in UK government bonds, in spite of the strong production data, encouraged equities. Confidence spread across the full range of the stock market, lifting the FT-SE Mid 250 Index by 23.2 points to 3,800.8.

The market opened lower and it seemed at first that the Footsie 3,000 mark was about to be tested again. The abrupt upswing, in both equities and bonds, came following

the news that April industrial production had risen by 1.6 per cent, for an annualised gain of 5.8 per cent; the UK Treasury later added that manufacturing output for the three months to April stood at a three year high.

Confidence was further encouraged by good trading statements from among others, Mayer International and Northern Foods. The market made steady progress, show-

ing a gain of 38.4 at its mid-session peak.

Share volume was very thin in the first hour but gathered pace significantly during the session. The final volume total of 591.7m shares showed a gain of 10 per cent over the figure for the previous day.

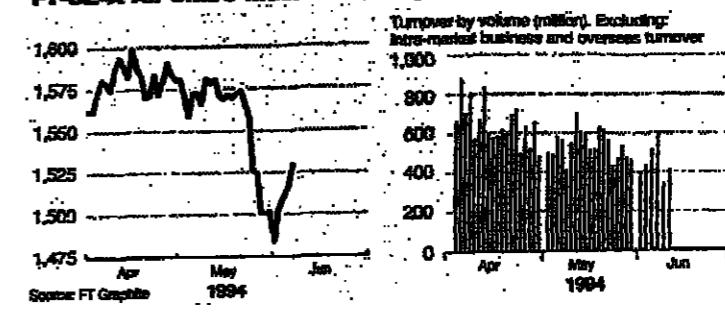

Traders were confident that the value of retail business, which will

be disclosed today, will show improvement from the still dismal £390m recorded on Tuesday.

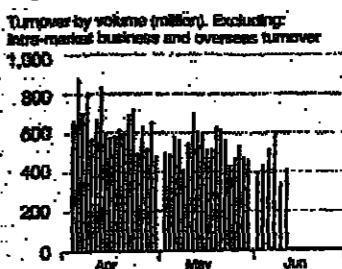

"A very positive day for equities," commented Mr Ian Harnett at Strauss Turnbull, "with clear signs that the market will now be driven by earnings and dividend growth." Al Kleinveld Benson Securities, Mr Edmund Warner said that Mr Major's assurance on dividend policy was "very important. Probably

worth 75 to 100 points on the Foot-

sie". Mr Major's comments were regarded as a significant commitment to the City of London and to the financial markets. Criticism of dividend-paying policies at British companies has been a restraining factor on the stock market over the past month.

Background factors across Europe were also favourable to equities. The modest reduction in money market repo rates in Germany was no surprise, but favourable comments from both French and German central bankers also helped sentiment. A slight softening in the US dollar at the close chastened London.

• The FT-SE Actuaries Committee yesterday announced that GKN will join the list of FT-SE 100 index components with effect from June 20, replacing Tarmac.

proceedings brought by helicopter group Westland against the Arab Organisation for Industrialisation in France helped Westland's parent GKN rise 12 to 303p. Volume in the stock - which is to be included in the FT-SE 100 as a replacement for Tarmac - was 2.4m.

Results in line with market expectations saw Northern Foods gain 4 to 232p. Pre-tax profits for the year ended March 31 rose to £157.2m compared with £153.2m a year ago. Food manufacturing analysts downgraded their forecast for the current year, mainly because of restructuring provisions.

Dealers said EBIT had initially well received and in line with market forecasts but Northern Foods, which touched 317p immediately following the results, subsequently dipped to close 8 down at 305p as institutions switched into S.G. Warburg. The latter raced up 14 to 252p. Kleinwort Benson shares were unaffected and ended up 3 to 458p.

London International Group fell 8% to 90p as the company announced pre-tax losses of £174.9m and a one-for-one rights issue.

The rights issue, which is at a price of 70p, had been well-flagged and the market had been braced for the figures.

Although the share price receded there was some optimism surrounding the stock, sparked by the belief that the company was finally putting its troubles behind it and had turned a corner. "There are

good prospects for recovery. There is the feeling that this year has been a watershed for LIG," said Mr Nigel Barnes at Hoare Govett. Turnover was above average at 2.5m.

A settlement of £115m in the

proceedings brought by heli-

copter group Westland against the Arab Organisation for Industrialisation in France helped Westland's parent GKN rise 12 to 303p. Volume in the stock - which is to be included in the FT-SE 100 as a replacement for Tarmac - was 2.4m.

Results in line with market expectations saw Northern Foods gain 4 to 232p. Pre-tax profits for the year ended March 31 rose to £157.2m compared with £153.2m a year ago. Food manufacturing analysts downgraded their forecast for the current year, mainly because of restructuring provi-

sions. Dealers said EBIT had joined

Strauss and Warburg in recommending Cadbury Schweppes, the shares scoring a sharp rise of 15 to 472p on turnover of 2.6m.

There was improved business in the food retailers with Sainsbury gaining 9 to 395p on 4m traded, still boosted by the Yamaichi recommendation and Argyll ahead 3 to 238p on 4.7m. Kwik Save climbed 12 to 554p, while Iceland put on 5 to 143p.

The stores sector was largely subdued with dealers reporting little buying activity. MFI, the furniture group, was helped by a UBS buy recommendation, the shares gaining 2 to 156p. Boots was said to be given a push by Smith New Court, and the shares added 10 to 333p.

Kinleith Radio, at 242p a share, sent the shares leaping 33 to 238p. Metro Radio, up 11 at 374p, and Scottish, ahead 20 at 385p, also excited interest.

Property company Argent Group made a successful market debut, being placed at 255p and ending the day at 266p.

A top of the range dividend from Meyer International saw the timber group's shares advance 18 to 453p. Amec was 6 firmer at 116p after the optimistic comments at the annual meeting.

A presentation by Guinness, said to be with James Capel, helped the shares add 9 to 477p.

Amersham, the chemicals group, continued to reflect the excellent figures released on Tuesday and subsequent profit upgrades, the shares closing 17 higher at 988p.

Shareholders at the Euro Disney arm were told that its FFFcon rights issue would be priced at around 10p per share and would be launched shortly. The shares slid 10 to 405p. The company also cautioned that attendances for the second half of this year could be lower than the period in the previous year, although forecast that losses in the same period would be lower.

MANAGED FUNDS NOTES

Prices are in parts unless otherwise indicated and discounted 8 units per point refer to U.S. Dollars. The following are for regular accounts. Prices of certain other units from time to time will be quoted below on an estimated basis.

Domiciled funds of U.K. origin, e.g. Finsbury provide information on a daily basis. Some American, e.g. Franklin provide information on a weekly basis.

Underwritten by Cazenove Brothers Ltd. In Tasmania see West, & Cazenove which includes all necessary information, & Franklin's daily price, by Gresham Securities.

Supported & West, see also Jersey leg., & Branches.

Only available in convertible bonds. Cf West's column on estimated rates of UK returns, as also elsewhere.

(**) Funds not yet recognised. The regulatory authorities have issued a statement. Financial Services Commission, Hong Kong, Central Bank of Ireland, etc. of May, 1973.

MARKETS REPORT

Brown scares dollar

Comments from Mr Ron Brown, the US commerce secretary, livened up an otherwise quiet day on the foreign exchanges yesterday, write *Philip Gwynn and Motoo Rich*.

Speaking in Paris, Mr Brown told reporters that there was a "serious problem" in the bilateral relationship between the US and Japan. His remarks caused the dollar to fall by nearly 60 basis points against the Yen, to ¥103.60, and by about 30 basis points against the D-Mark, to DM1.6680.

It later recovered to close in London at ¥104.030 and DM1.6698. On Tuesday it closed at ¥105.235 and DM1.6695.

In the US, sterling finished virtually unchanged at DM2.5163 against the D-Mark from DM2.5159 as European election worries offset a strong set of production figures.

Elsewhere concerns about a possible "no" vote in Sunday's Austrian referendum, on joining the European Union, weighed on the Swedish krona. Sweden is also hoping to join the EU.

In Germany the Bundesbank cut the repo rate by five basis points to 5.10 per cent, while the Belgian central bank lowered its central rate to 5.10 per cent.

Although the dollar finished the day firm, the market's skittish response to Mr Brown's comments showed residual nervousness about the US currency. Coming the day after a combative statement from Mr Mickey Kantor, the US trade representative, it aroused fears that the Administration might not have fully shaken off its "dollar debasement" policy.

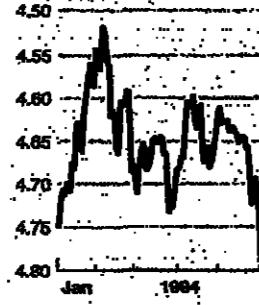

Mr Peter Luxton, economist at Barclays, said the officials' comments reminded the markets they had overestimated the "apparent relaxed attitude" of the US administration on trade with Japan. "The markets got over euphoric over the past couple of weeks," he said.

"But the super 301 locomotive is still rolling slowly through and everything is not all hunky-dory."

Supporting a bearish case for the dollar were reports that most Japanese traders who attended last week's Forex 94

Swedish Krona

Against the DM \$kr per DM

at SKr4.754 from SKr4.755.

Mr Tony Norfield, US treasury economist at ABN-AMRO, said the referendum should have "very little direct implications" on the European currency markets.

But Mr Luxton said fears of a "no" vote in Austria were already making the Swedish krona vulnerable. He added that in anticipation of poor Swedish inflation figures released today, the markets had "gained up for a bit of a sell off in the Swedish krona".

To some extent, though, the markets were knocking on an open door. The krona was already weak on market fears that the government, faced with an election in September, would not be able to apply the requisite mix of fiscal and monetary policies.

Analysts say a fiscal tightening is necessary to curb the 10 per cent budget deficit, but this needs to be accompanied by lower interest rates if the recovery is not to snuff out. The government, however, finds itself boxed in because it is difficult to cut rates against the backdrop of a weakening currency.

Mrs Edwards comments: "I don't see the way out that is under the control of the Swedes at the moment."

The futures markets were calmer after their recent gyrations. The December short-stemming contract traded 20,000 lots to finish at 93.79 from 93.78. The December euromark contract closed at 94.61 from 94.73.

German call money rates eased to 5.05/5.15 per cent from 5.10/5.20 per cent after the repos. Traders are not, however, expecting any shift in official rates at today's Bundesbank council meeting.

In the UK money markets the Bank of England provided £357m liquidity to the market after forecasting a shortage of £360m. The overnight rate moved between 4 per cent and 5.5 per cent.

In Europe the main focus of attention was the upcoming Austrian referendum. Concern that the Austrians might vote no has caused the Swedish krona to weaken recently. Yesterday, however, the Swedish currency finished virtually unchanged against the D-Mark

Dow becalmed despite new progress by bonds

Wall Street

US share prices gathered no forward momentum yesterday morning despite renewed progress by the bond market, writes Frank McCourt in New York.

By 1pm, the Dow Jones Industrial Average was 3.08 lower at 3,752.83, while the more broadly based Standard & Poor's 500 slipped 0.56 to 457.65.

In the secondary markets, the American SE composite was down a scant 0.09 at 441.67. The Nasdaq showed the sharpest decline among the leading market indices, falling 5.08 to 734.23 under the weight of slumping technology issues.

Volume on the NYSE was moderate, with 147m shares traded by 1pm. Declining issues led advances, 1,001 to 942.

It was yet another day without economic guidance from Washington, but remarks by two senior officials helped fill the void.

In London, the chairman of the Federal Reserve, Mr Alan Greenspan, said inflation was "clearly restrained", a comment which brought a measure of cheer and moderate gains to the US Treasury market. In stocks, however, neither his pronouncement nor the response it elicited in bonds made much of an impact.

However, Mr Ron Brown, the commerce secretary, created a minor stir. In Paris, he said trade sanctions against Japan remained an option for Washington, although the adminis-

tration had no current plans to use them.

His statement triggered a fresh decline in the value of the dollar against the yen, and coincided with a 10-point setback in the Dow industrials by 1pm. But stocks worked their way back to just below their opening levels as the afternoon session commenced.

Among individual issues, Foodmaker led the NYSE's most active list, as a block of stock worth about 5 per cent of the fast-food operator was sold. Its share price dropped 5% to \$50 soon after the sale, which the company said may have been initiated by Tiger Management, a big institutional investor.

In the computer section, Compaq was garnering lots of unwelcome attention again, even though there was no fresh news behind the selling.

The stock dropped a further 1% to \$55, after shedding 1% the previous session. IBM dipped 5% to \$62.42 and Apple shed 5% to \$27.00 on the Nasdaq.

However, it was semiconductor stocks which were facing the heaviest pressure on the Big Board. Texas Instruments lost 3% to \$41.74 and Micron Technologies dropped 1% to \$32.34.

Their setback was linked to an announcement by Merisel, a computer products wholesaler, which warned that its earnings outlook had been clouded by an expected slowdown in the US computer market. The stock plunged 9% to \$10.00 on the Nasdaq, where it led a broad pullback in the technol-

ogy group.

Among the more widely held issues, Lotus Development fell 2% to \$55. Oracle receded 1% to \$36 and Cyrix was marked down 1% to \$26.

Canada

Toronto was lower at noon, the TSX-300 composite index losing 30.87 at 4,241.19 in volume of 31.1m shares. Declining issues outnumbered advances by 382 to 207, with 320 issues unchanged.

Cott Corp gave up C\$3.74 in spite of first-quarter earnings that were double last year's level. Newbridge Networks rose C\$7.00 to C\$65.00 on solid fourth-quarter earnings that matched analyst expectations.

In the computer section,

Compaq was garnering lots of unwelcome attention again, even though there was no fresh news behind the selling.

The stock dropped a further 1% to \$55, after shedding 1% the previous session. IBM dipped 5% to \$62.42 and Apple shed 5% to \$27.00 on the Nasdaq.

EUROPE

Reappraisal of banks helps Frankfurt

The markets returned a more orderly upward path yesterday, writes Our Markets Staff.

FRANKFURT recovered from the nervousness which affected the market on Tuesday as investors took the view that the sharp fall in bank shares had been overdone.

The Dax index finished 10.10 up to 2,145.20, but slipped slightly in the after market to 2,143.85. Turnover totalled DM2 to DM37.50.

PARIS was driven higher by strength in the bond market,

and the CAC 40 index closed the day 23.07 higher at 2,046.61.

Turnover was FF40.81.

Euro Disney came into prominence again as the theme park operator announced the pricing for its rights issue at FF10, at the top end of analysts' expectations. However, the shares initially dropped to FF7.83 before reviving to close off 90 centimes at FF7.50.

Gendarmerie des Eaux went against the trend, sliding FF7.62 to FF7.34 in spite of denying rumours that two of its directors had been arrested.

Analysts commented that by itself the development was not particularly serious for the creditor banks since a consortium of up to 50 were involved, with no single bank believed to have an exposure in excess of DM10m. However, coming soon after the Schneider affair, and with rumours that another property company might be in

trouble, the outlook was less reassuring, they added.

Among the banks, Deutsche eased DM4 to DM7.37.50, Commerzbank rose DM4.50 to DM38.00 and Dresdner slipped DM2 to DM37.50.

PARIS was driven higher by strength in the bond market, and the CAC 40 index closed the day 23.07 higher at 2,046.61.

and the CAC 40 index closed the day 23.07 higher at 2,046.61.

Turnover was FF40.81.

Euro Disney came into prominence again as the theme park operator announced the pricing for its rights issue at FF10, at the top end of analysts' expectations. However, the shares initially dropped to FF7.83 before reviving to close off 90 centimes at FF7.50.

Gendarmerie des Eaux went against the trend, sliding FF7.62 to FF7.34 in spite of denying rumours that two of its directors had been arrested.

Analysts commented that by itself the development was not particularly serious for the creditor banks since a consortium of up to 50 were involved, with no single bank believed to have an exposure in excess of DM10m. However, coming soon after the Schneider affair, and with rumours that another property company might be in

trouble, the outlook was less reassuring, they added.

Among the banks, Deutsche eased DM4 to DM7.37.50, Commerzbank rose DM4.50 to DM38.00 and Dresdner slipped DM2 to DM37.50.

PARIS was driven higher by strength in the bond market,

and the CAC 40 index closed the day 23.07 higher at 2,046.61.
